### Part I Motivation and Basics

1. **Introduction**  
   1.1 Motivation  
   1.2 Aim of this Book  
   1.3 Classes of CoMP Considered  
   1.4 Outline of this Book  

2. **An Operator's Point of View**  
   2.1 The Mobile Internet - A Success Story so far  
   2.2 Requirements on Future Networks and Upcoming Challenges  
   2.3 The Role of CoMP  
   2.4 The Role of Field Trials  

3. **Information-Theoretic Basics**  
   3.1 Observed Cellular Scenarios  
   3.2 Usage of OFDMA for Broadband Wireless Communications  
   3.3 Multi-Point Frequency-Flat Baseband Model Considered  
   3.4 Uplink Transmission  
      3.4.1 Basic Uplink Capacity Bounds  
      3.4.2 Full Cooperation in the Uplink  
      3.4.3 No Cooperation in the Uplink  
      3.4.4 Numerical Example  
   3.5 Downlink Transmission  
      3.5.1 Basic Downlink Capacity Bounds  
      3.5.2 Full Cooperation in the Downlink  
      3.5.3 No Cooperation in the Downlink  
      3.5.4 Numerical Example

3.6 Summary

4 Gains and Trade-Offs of Multi-Cell Joint Signal Processing

4.1 Modeling Imperfect Channel State Information (CSI)
   4.1.1 Imperfect CSI in the Uplink
   4.1.2 Imperfect CSI in the Downlink

4.2 Gain of Joint Signal Processing under Imperfect CSI

4.3 Trade-Offs in Uplink Multi-Cell Joint Signal Processing
   4.3.1 Different Information Exchange and Cooperation Schemes
   4.3.2 Numerical Results
   4.3.3 Parallels between Theory and Practical Cooperation Schemes

4.4 Degrees of Freedom in Downlink Joint Signal Processing

4.5 Summary

Part II Practical CoMP Schemes

5 CoMP Schemes Based on Interf.-Aware Transceivers or Interf. Coord.

5.1 DL Multi-User Beamforming with IRC
   5.1.1 Introduction
   5.1.2 Downlink System Model
   5.1.3 Linear Receivers
   5.1.4 Imperfect Channel Estimation
   5.1.5 Resource Allocation and Fair User Selection
   5.1.6 Single-Cell Performance
   5.1.7 Multi-Cell Performance under Perfect CSI
   5.1.8 Multi-Cell Performance under Imperfect CSI
   5.1.9 Summary

5.2 Uplink Joint Scheduling and Cooperative Interference Prediction
   5.2.1 Interference-Aware Joint Scheduling
   5.2.2 Cooperative Interference Prediction
   5.2.3 Practical Considerations
   5.2.4 Applicability of Both Schemes to the Downlink
   5.2.5 Summary

5.3 Downlink Coordinated Beamforming
   5.3.1 Introduction
   5.3.2 Single Receive Antenna at the Terminal
   5.3.3 Multiple Receive Antennas at the Terminal
   5.3.4 Summary

6 CoMP Schemes Based on Multi-Cell Joint Signal Processing

6.1 Uplink Centralized Joint Detection
   6.1.1 Introduction
   6.1.2 Joint Detection Algorithms

8.2.3 System Level SINR Analysis 178
8.2.4 Summary 181
8.3 Imperfect Sync in Frequency: Perf. Degradation and Compensation 181
  8.3.1 Downlink Analysis 182
  8.3.2 Uplink Analysis 189
  8.3.3 Summary 192

9 Channel Knowledge 193
  9.1 Channel Estimation for CoMP 193
    9.1.1 Channel Estimation - Single Link 194
    9.1.2 Channel Estimation for CoMP 202
    9.1.3 Multi-Cell Channel Estimation 204
    9.1.4 Uplink Channel Estimation 206
    9.1.5 Summary 208
  9.2 Channel State Information Feedback to the Transmitter 208
    9.2.1 Transmission Model 210
    9.2.2 Sum-Rate Performance Measure 211
    9.2.3 Channel Vector Quantization (CVQ) 211
    9.2.4 Minimum Euclidean Distance Based CVQ 213
    9.2.5 Maximum SINR Based CVQ 214
    9.2.6 Pseudo-Maximum SINR based CVQ 215
    9.2.7 Application to Zero-Forcing (ZF) Precoding 216
    9.2.8 Resource Allocation 216
    9.2.9 Simulation Results 216
    9.2.10 Summary 218

10 Efficient and Robust Algorithm Implementation 219
  10.1 Robust and Flexible Base Station Precoding Implementation 219
    10.1.1 System Model 220
    10.1.2 Transmit Filter Eigendecomposition 221
    10.1.3 Transmit Filter Computations 222
    10.1.4 The Order-Recursive Filter in Details 224
    10.1.5 Example: SINR as Function of the Condition Number 226
    10.1.6 Summary 227
  10.2 Low-Complexity Terminal-Side Receiver Implementation 227
    10.2.1 Introduction to Interference Rejection Combining (IRC) 228
    10.2.2 IRC with Known Channel and Interference Covariance 231
    10.2.3 Implementation Losses from Imperfect Channel Estimation 233
    10.2.4 Losses from Spatial Interf.-and-Noise Covariance Estimation 237
    10.2.5 Losses from Channel and Interference Estimation Errors 241
    10.2.6 Summary 241
11 Scheduling, Signaling and Adaptive Usage of CoMP

11.1 Centralized Scheduling for CoMP
   11.1.1 Introduction
   11.1.2 System Model
   11.1.3 Centralized Scheduling Problems
   11.1.4 Analyses and Results
   11.1.5 Summary

11.2 Decentralized Radio Link Control and Inter-BS Signaling
   11.2.1 Resource Allocation
   11.2.2 Link Adaptation
   11.2.3 Radio Link Measurements
   11.2.4 Uplink Power Control
   11.2.5 Uplink Timing Advance
   11.2.6 HARQ-related Timing Constraints for UL CoMP
   11.2.7 Handover
   11.2.8 Inter-BS Signaling
   11.2.9 Summary

11.3 Ad-hoc CoMP
   11.3.1 Introduction
   11.3.2 Ad-Hoc CoMP With More Accurate CSI
   11.3.3 Ad-Hoc CoMP with CSI Impairments
   11.3.4 Ad-Hoc CoMP and HARQ
   11.3.5 Summary

12 Backhaul

12.1 Fund. Limits of Interf. Mitigation with Limited Backhaul Coop.
   12.1.1 Introduction
   12.1.2 Uplink Scenario: Receiver Cooperation
   12.1.3 Downlink Scenario: Transmitter Cooperation
   12.1.4 UL-DL Reciprocity and Generalized Degrees of Freedom
   12.1.5 Summary

12.2 Backhaul Requirements of Practical CoMP Schemes
   12.2.1 Types of Backhaul Data and Scaling Laws
   12.2.2 Specific Backhaul Requirements of Exemplary CoMP Schemes
   12.2.3 Backhaul Latency Requirements
   12.2.4 Backhaul Topology Considerations
   12.2.5 Summary

12.3 CoMP Backhaul Infrastructure Concepts
   12.3.1 Ethernet
   12.3.2 Passive Optical Network
   12.3.3 Digital Subscriber Line
   12.3.4 Microwave
   12.3.5 The X2 Interface
   12.3.6 Backhaul Topology Concepts
Part IV Performance Assessment

13 Field Trial Results

13.1 Real-time Impl. and Trials of Adv. Receivers and UL CoMP
  13.1.1 Real-time Implementation and Lab Tests
  13.1.2 Uplink Successive Interference Cancelation (SIC) Receiver
  13.1.3 Uplink Macro Diversity Trials with Distributed RRHs
  13.1.4 Summary

13.2 Assessing the Gain of Uplink CoMP in a Large-Scale Field Trial
  13.2.1 Measurement Setup
  13.2.2 Signal Processing Architecture and Evaluation Concept
  13.2.3 Noise Estimation
  13.2.4 Channel Equalization
  13.2.5 Field Trial Results
  13.2.6 Summary

13.3 Real-time Implementation and Field Trials for Downlink CoMP
  13.3.1 Introduction
  13.3.2 Enabling Features
  13.3.3 Real-time Implementation
  13.3.4 Field Trials
  13.3.5 Summary

13.4 Predicting Pract. Achievable DL CoMP Gains over Larger Areas
  13.4.1 Setup and Closed-Loop System Design
  13.4.2 Measurement and Evaluation Methodology
  13.4.3 Measurement Campaign
  13.4.4 Summary

13.5 Lessons Learnt Through Field Trials

14 Performance Prediction of CoMP in Large Cellular Systems

14.1 Simulation and Link-2-System Mapping Methodology
  14.1.1 General Simulation Assumptions and Modeling
  14.1.2 Channel Models and Antenna Models
  14.1.3 Transceiver Techniques
  14.1.4 Link-to-System Interface
  14.1.5 Key Performance Indicators
  14.1.6 Summary

14.2 Obtaining Chn. Model Params. via Chn. Sounding or Ray-Tracing
  14.2.1 Large-Scale-Parameters
  14.2.2 Measurement-based Parameter Estimation
  14.2.3 Ray-Tracing based Parameter Simulation
  14.2.4 Comparison between Measurements and Ray-Tracing
14.3 Uplink Simulation Results

14.3.1 Compared Schemes 387
14.3.2 Simulation Assumptions and Parameters 389
14.3.3 Backhaul Traffic 391
14.3.4 Simulation Results 392
14.3.5 Summary 395

14.4 Downlink Simulation Results

14.4.1 Compared Schemes 396
14.4.2 Simulation Assumptions and Parameters 397
14.4.3 Detailed Analysis of Coordinated Scheduling/Beamforming 398
14.4.4 Backhaul Traffic 406
14.4.5 Simulation Results 406
14.4.6 Summary 408

Part V Outlook and Conclusions 409

15 Outlook

15.1 Using CoMP for Terminal Localization

15.1.1 Localization based on the Signal Propagation Delay 411
15.1.2 Further Localization Methods 416
15.1.3 Localization in B3G Standards 418
15.1.4 Summary 422

15.2 Relay-Assisted Mobile Communication using CoMP

15.2.1 Introduction 423
15.2.2 Reference Scenario 424
15.2.3 System and Protocol Description 425
15.2.4 Trade-Offs in Relay Networks 427
15.2.5 Numerical Evaluation of CoMP and Relaying 428
15.2.6 Cost/Benefit Trade-Off 428
15.2.7 Energy/Benefit Trade-Off 429
15.2.8 Computation/Transmission Power Trade-Off 430
15.2.9 Summary 432

15.3 Next Generation Cellular Network Planning and Optimization

15.3.1 Introduction 432
15.3.2 Classical Cellular Network Planning and Optimization 433
15.3.3 Physical Characterization of Capacity Gains through CoMP 435
15.3.4 Summary 443

15.4 Energy-Efficiency Aspects of CoMP

15.4.1 System Model 444
15.4.2 Effective Transmission Rates 447
15.4.3 Backhauling 448
15.4.4 Energy Consumption of Cellular Base Stations 449
15.4.5 System Evaluation  451
15.4.6 Summary  453

16 Summary and Conclusions  455
16.1 Summary of this Book  455
   16.1.1 Most Promising CoMP Schemes and Potential Gains  455
   16.1.2 Key Challenges Identified  457
16.2 Conclusions  458
   16.2.1 About this Book  459
   16.2.2 CoMP’s Place in the LTE-Advanced Roadmap and Beyond  460
