Michael Bukshtab

Applied Photometry, Radiometry, and Measurements of Optical Losses
# Contents

## Part I  Applied Photometry and Radiometry

1  Radiometric and Photometric Quantities and Notions .......................... 3
   1.1  Physical Sense of Radiometric Conception .............................. 3
       1.1.1  Statistical Field of Optical Radiation ............................ 3
       1.1.2  Propagation of Light Waves ..................................... 4
       1.1.3  Intensity of Radiation and Light Rays ............................ 6
   1.2  Parameters of Optical Radiation ...................................... 9
       1.2.1  Radiometric Quantities and Units ................................ 9
       1.2.2  Parameters of Optical Radiation ................................ 12
       1.2.3  Invariable Parameters of a Light Tube ............................ 15
       1.2.4  Flux and Radiance of Optical Radiation .......................... 18
       1.2.5  Intensity and Emittance of a Light Beam ......................... 20
       1.2.6  Irradiance and the Inverse-Square and Cosine Law ............... 24
   1.3  Interactions of Radiation with Material Objects ....................... 27
       1.3.1  Factors and Coefficients of Attenuation ........................ 27
       1.3.2  Localized Optical Properties .................................. 33
       1.3.3  Multiple Optical Elements .................................... 36
       1.3.4  Diffuse Irradiation ........................................... 40

2  Methods of Photometric and Radiometric Measurements ....................... 49
   2.1  Evaluation of Power and Energy Extents of Optical Radiation ......... 49
       2.1.1  Methods of Optical Flux and Energy Measurements .............. 49
       2.1.2  Measurement of Surface Density of Light ...................... 53
       2.1.3  Absolute Flux Measurement Via an Integrating Sphere ........... 55
       2.1.4  Spherical Density of Radiation ................................ 56
       2.1.5  Measurement of Angular Density of Radiation .................. 59
       2.1.6  Radiance and Luminance Measurements ........................... 60
   2.2  Analysis of Attenuation Factors .................................... 62
       2.2.1  Measurements in Transmitted Light ............................. 63
2.2.2 Measurements of Reflectance ........................................... 66
2.2.3 Directional Scattering Measurements ................................. 73
2.3 Measurements of Color Coordinates and Indices ....................... 76
2.4 Photometry of Integrating Spheres ........................................ 92
  2.4.1 Uniformly Scattering Spheres ........................................ 92
  2.4.2 Relative Measurements .............................................. 95
  2.4.3 Samples Performing as Nonuniform Diffusers ....................... 99
  2.4.4 Absolute Measurements in an Integrating Sphere .................. 99
  2.4.5 Baffling Method .................................................. 101
  2.4.6 Efficiency Approach ............................................. 102
  2.4.7 Viewing Method .................................................. 103
  2.4.8 Reduction of Systematic Errors of Absolute Measurements .......... 104
  2.4.9 Spheres of Nonisotropic Diffusers ................................ 108
  2.4.10 Fully Isotropic Irradiation of Integrating Sphere ............... 112
  2.4.11 Essentials of Diffuse Transmittance Measurements ............... 114
  2.4.12 Separation of Direct and Diffuse Transmittance ................ 116
  2.4.13 Coupling of Integrating Spheres ................................ 118
  2.4.14 Integrating Spheres for Isotropic Irradiation ................... 121

3 Radiometry of Partially Coherent Radiation .............................. 129
  3.1 Coherence and Radiative Transfer .................................... 129
    3.1.1 Observability and Statistical Properties of Radiation ........ 129
    3.1.2 Planar Sources of Incoherent and Coherent Light ............. 135
    3.1.3 Quasi-Homogeneous Partially Coherent Planar Sources ........ 137
    3.1.4 Propagation of Coherence and Observation of Polychromatic Radiation .............................................. 141
    3.1.5 Summary .................................................. 144
  3.2 Laser and Pulsed Light ............................................... 144
    3.2.1 Propagation Extents of Laser Radiation ....................... 144
    3.2.2 Applicability of Lasers for Various Optical Measurements .... 147
    3.2.3 Optical Radiation as a Pulse Train ........................... 151
    3.2.4 Measurements in Pulsed Radiation ............................ 154
  3.3 Interference Phenomena and Optical Measurements ................... 159
    3.3.1 Fringe Visibility of Interference Patterns in Transmitted and Reflected Light ........................................... 159
    3.3.2 Reductions of Interference Noise ................................ 163
    3.3.3 Interference Effects Induced by Birefringence ................ 170
    3.3.4 Stabilization of Radiation Emission .......................... 180
    3.3.5 Polarization Measurements ................................... 184
  3.4 Diffraction Corrections and Gratings in Radiometry and Photometry .................................................... 187
3.4.1 Maxima-Shifting Anomaly for Step-Function Diffraction Grating in Reflected Light .......... 192
3.4.2 Diffraction Gratings as Spectral and Color Filters ...... 214

4 Photometers and Radiometers ............................................. 217
4.1 Optical Design and Absolute Calibration of Radiometers ........ 217
4.1.1 Spectrally Unselective Systems ................................ 217
4.1.2 Diffuse Attenuators .................................................. 222
4.1.3 Radiometric and Photometric Energy and Power Scales ............................................. 227
4.1.4 Absolute Calibration of Photoelectric Radiometers ...... 229
4.1.5 Detector-Based Spectroradiometric and Photometric Scales ............................................. 231
4.1.6 Optical Elements of Radiometric and Photometric Standards ............................................. 235
4.1.7 Radiometric and Photometric Scales for Spectral Irradiance and Luminous Intensity .......... 238
4.2 Attenuation and Color Photometers and Spectrophotometers ..... 240
4.2.1 Measurements of Direct Transmittance and Specular Reflectance ............................................. 240
4.2.2 Polychromatic and Spectrophotometric Systems ........ 243
4.2.3 Reference Transmission Spectrophotometers ........ 245
4.2.4 Specialty Spectrophotometers ............................................. 248
4.2.5 Systems of Multiple-Beam Interactions ........ 250
4.2.6 Measurements at Intensive Irradiation ........ 252
4.2.7 Studies of Integrated Scattering ............................................. 253
4.2.8 Specialty Applications of Integrating Spheres for Optical Calibrations and Measurements ...... 261
4.2.9 Color-Coordinate Measurements ............................................. 264
4.3 Photometric Accuracy and Verification of Linearity ........ 268
4.3.1 Measurements with Fixed Attenuation ........ 269
4.3.2 Dual-Aperture and Superposition Methods ........ 274
4.3.3 Pulsed Measurements .................................................. 276
4.3.4 Arrangements for Light Addition Studies ......................... 279

Part II Measurements of Optical Losses

5 Conventional Loss-Measurement Techniques ......................... 289
5.1 Internal Transmittance and Attenuation Coefficient ........ 289
5.2 Specular Reflectance .................................................. 299
5.3 Scattering Factor .................................................. 309

6 Systems of Multiple Reflections ............................................. 321
6.1 Flat-Mirror and Prism Reflector Cells ......................... 321
6.2 Multipass Cavities .................................................. 328
6.2.1 Long-Path Matrix Cells ............................................. 332
