MEDICAL DEVICE TECHNOLOGIES

A SYSTEMS BASED OVERVIEW USING ENGINEERING STANDARDS

GAIL D. BAURA
Contents

Preface ix
About the Author xii
Nomenclature xiii

I
MEDICAL DEVICES

1. Diagnosis and Therapy
Medical Device Definitions 3
Clinical Need  5
Medical Devices vs. Medical Instruments  5
Sensors  11
Patient and Operator Safety  21
Amplification  22
Data Acquisition  25
Medical Electrical Stimulators  27
Systems  33
Summary  34

2. Electrocardiographs
Cardiac Electrical Conduction  40
Standard Leads  42
Two Arrhythmia Classes  47
Clinical Need  50
Historic Devices  50
System Description and Diagram  52
Key Features from Engineering Standards  52
Summary  56

3. Pacemakers
Two Arrhythmia Classes  60
Heart Failure  63
Tissue Response to Stimulation Voltage  65
Clinical Need  66
Historic Devices  66
System Description and Diagram  69
Key Features from Engineering Standards  75
Temporary Cardiac Pacing  79
Summary  79

4. External Defibrillators
Tachyarrhythmias  84
Sudden Cardiac Arrest and Cardiopulmonary Resuscitation  87
Defibrillation Mechanism and Threshold  88
Clinical Need  89
Historic Devices  90
System Description and Diagram  95
Key Features from Engineering Standards  97
Summary  99

5. Implantable Cardioverter Defibrillators
Wound-Healing Response  104
Clinical Need  108
Historic Devices  108
System Description and Diagram  111
Key Features from Engineering Standards  113
FDA Case Study: Guidant ICD Recall  115
Summary  118

6. Heart Valves
Cardiac Mechanics  121
Blood Coagulation  127
Clinical Need  128
Historic Devices  129
System Description and Diagram  133
FDA Case Study: Bjork-Shiley Heart Valve  135
Key Features from Engineering Standards  139
Summary  141
CONTENTS

7. Blood Pressure Monitors
Blood Pressure Propagation 148
Clinical Need 150
Historic Devices 151
System Descriptions and Diagrams 152
Key Features from Engineering Standards 160
Summary 161

8. Catheters, Bare Metal Stents, and Synthetic Grafts
Atherosclerosis 166
Pericutaneous Coronary Interventions 167
Aneurysms 171
Clinical Need 173
Historic Devices 173
System Descriptions and Diagrams 176
FDA Case Study: Guidant Ancure Endovascular Graft System 184
Key Features from Engineering Standards 187
Summary 189

9. Hemodialysis Delivery Systems
Body Fluid Compartments 194
Renal Anatomy and Physiology 196
Renal Replacement Therapies 200
Dialysis Adequacy Through Urea Modeling 202
Clinical Need 204
Historic Devices 205
System Description and Diagram 207
Key Features from Engineering Standards 211
Summary 213

10. Mechanical Ventilators
Pulmonary Physiology 218
Ventilator Mechanics 223
Clinical Need 226
Historic Devices 226
System Description and Diagram 228
Key Features from Engineering Standards 233
Summary 234

11. Pulse Oximeters
Oxygen Transport in Blood 238
Beer-Lambert Law 241

12. Thermometers
Thermoregulation Physiology 258
Skin Temperature vs. Core Temperature 260
Clinical Need 262
Historic Devices 263
System Descriptions and Diagrams 264
Key Features from Engineering Standards 268
FDA Consensus Standards for Accuracy 271
Summary 272

13. Electrocencephalographs
Brain Physiology 276
Original 10-20 System 280
Clinical Need 286
Historic Devices 288
System Description and Diagram 289
Key Features from Engineering Standards 291
Bispectral Index Monitors 291
Summary 293

14. Deep Brain Stimulators
Basal Ganglia 298
Target Localization 299
Clinical Need 302
Historic Devices 303
System Description and Diagram 304
Key Features from Engineering Standards 309
Summary 311

15. Cochlear Implants
Auditory Physiology 316
Speech Processing 320
Clinical Need 322
Historic Devices 324
System Description and Diagram 326
Key Features from Engineering Standards 329
Summary 332
16. Functional Electrical Stimulators
Spinal Nerves 336
Electrical Stimulation 340
Clinical Need 343
Historic Devices 344
System Description and Diagram 345
Emerging Technologies 347
Key Features from Engineering Standards 352
Summary 353

17. Intraocular Lens Implants
Ocular Physiology 358
Ultrasound 361
Clinical Need 367
Historic Devices 367
System Description and Diagram 370
Key Features from Engineering Standards 374
Summary 377

18. Total Hip Prostheses
Hip Physiology 382
Wear-Mediated Osteolysis 386
Clinical Need 389
Historic Devices 389
System Descriptions and Diagrams 391
Key Features from Engineering Standards 396
Summary 400

19. Drug-Eluting Stents
Combination Products 406
Drug Delivery Using Coatings 407
Clinical Need 411
Engineering Design 411
Drug-Eluting Stent Requirements 413
System Descriptions and Diagrams 414
Key Features from Engineering Standards 417
Summary 417

20. Artificial Pancreas
Blood Glucose Regulation 424
Compartmental Models 427
Clinical Need 433
Historic Devices 435
Artificial Pancreas Requirements 438
System Description and Diagram 441

21. Electrocardiograph Design Lab
Strategic Planning 455
Materials and Methods 455
Results and Analysis 457
Discussion 457

22. Electrocardiograph Filtering Lab
Strategic Planning 459
Introduction to Wavelet Filters 460
Materials and Methods 462
Results and Analysis 463
Discussion 464

23. Pacemaker Programming Lab
Strategic Planning 465
Materials and Methods 465
Results and Analysis 469
Discussion 469

24. Echocardiography Lab
Strategic Planning 471
Materials and Methods 472
Results and Analysis 478
Discussion 478

25. Patient Monitoring Lab
Strategic Planning 479
Patient Monitoring 479
Materials and Methods 481
Results and Analysis 482
Discussion 483

26. Thermometry Accuracy Lab
Strategic Planning 485
Materials and Methods 486
RESULTS AND ANALYSIS 488
Discussion 488

27. Surface Characterization Lab
Strategic Planning 489
Medical Device Coatings 489
Materials and Methods 490
Results and Analysis 492
Discussion 492

28. Entrepreneurship Lab
Strategic Planning 495
Crossing the Chasm Background 496
Materials and Methods 497
Crossing the Chasm Discussion Lecture 499

Index 501
