

**USING MOTION PLANNING
AND GENETIC ALGORITHMS
IN MOVEMENT OPTIMIZATION
OF INDUSTRIAL ROBOTS**

Bibliographic information of the German National Library

The German National Library lists this publication in the German national bibliography, with detailed bibliographic information on the Internet at <http://dnb.d-nb.de>.

Author's acknowledgement to Gabriela Chmelíková for translation.

This scientific monograph originated from the author's dissertation thesis defended at the Slovak University of Technology in Bratislava, Faculty of Materials Science and Technology in Trnava.

Reviewers:

Doc. Ing. Anton Kachaňák, CSc.

Prof. Ing. Juraj Špalek, PhD.

Doc. Ing. Peter Schreiber, PhD.

Ing. Augustín Gese, PhD.

Author's contact address:

CONTENTS

INTRODUCTION	9
1. Theoretical background.....	13
1.1 Robot and surrounding environment.....	13
1.2 Degrees of freedom	13
1.3 Overview of robot path planning methods.....	14
1.3.1 Exact planning.....	14
1.3.2 Visibility graph.....	14
1.3.3 Retraction method	14
1.3.4 Potential field methods	15
1.3.5 Dividing the space into simple areas.....	15
1.3.6 A* algorithm	15
1.3.7 Probabilistic planning	16
1.3.8 Genetic algorithm - GA	16
2. Motion trajectory planning.....	17
2.1 Global and local planning.....	17
2.2 Holonomic and non-holonomic planning	17
2.3 Complete motion planning algorithms	18
2.4 Path planning.....	18
2.4.1 Discrete environment.....	19
2.4.2 Continuous environment	19
2.4.3 Robot movement	20
2.4.4 Probabilistic algorithms	21
2.4.5 Use of probabilistic algorithms.....	21
2.4.6 Classification of planning algorithms	22
3. Genetic algorithms.....	24
3.1 GA definition.....	25
3.2 Size of population	26
3.3 Initial population.....	26
3.4 Chromosome representation	27
3.5 Fitness	27
3.6 Selection of parents.....	27
3.7 Genetic crossover operator	28
3.8 Genetic mutation operator	28
3.9 Replacement scheme.....	29
3.10 Criterion of ending.....	29
4. Robot motion control.....	31

4.1	Optimal robot control.....	37
4.2	Formulation of the robot optimal control matter.....	38
4.2.1	Dynamics of manipulator.....	39
4.2.2	Marginal conditions and restrictions	40
4.2.3	Functional of quality of dynamic system	40
4.2.4	Formulation of optimal control	42
4.2.5	Types of optimal control.....	43
4.3	Solution to optimal control.....	43
4.4	Overview of existing methods of optimal motion control	44
4.4.1	Optimization with more criteria	45
4.4.2	Time-optimal control.....	45
4.4.3	Optimization via genetic algorithms.....	46
4.4.4	Introduction to the subject matter solution via genetic algorithms	47
4.5	Formulation of genetic trajectory planning	48
4.5.1	Fitness transformation via punishment function.....	49
4.5.2	Subject matter definition.....	51
4.5.3	Parameterization of genetic trajectory	53
4.6	Procedure of genetic trajectory planner.....	53
4.6.1	Acceleration parameterization for genetic algorithm.....	53
4.6.2	Trajectory parameter coding	56
4.6.3	Working with limit conditions	57
5.	Solution proposal and implementation	60
5.1	Algorithm of the whole procedure	60
5.2	Solution implementation in support software	65
5.2.1	Robot model.....	65
5.2.2	Trajectory optimization	69
5.2.3	Simulation results.....	77
5.3	Experimental verification of results	77
6.	Conclusion	87
	References.....	89
