## 7. Vector and Matrix Norms

### 7.1. Vector Norms
- Properties of the 2-Norm
- Spherical Coordinates

### 7.2. Matrix Norms
- The Frobenius Matrix Norm
- Induced Matrix Norms

### 7.3. Submultiplicative Matrix Norms

### 7.4. Computing the Matrix 2-Norm

### 7.5. Properties of the Matrix 2-Norm

### 7.6. Chapter Summary

### 7.7. Problems
- 7.7.1. MATLAB Problems

## 8. Floating Point Arithmetic

### 8.1. Integer Representation

### 8.2. Floating-Point Representation
- Mapping from Real Numbers to Floating-Point Numbers

### 8.3. Floating-Point Arithmetic
- Relative Error
- Rounding Error Bounds

### 8.4. Minimizing Errors
- Avoid Adding a Huge Number to a Small Number
- Avoid Subtracting Numbers That Are Close

### 8.5. Chapter Summary

### 8.6. Problems
- 8.6.1. MATLAB Problems

## 9. Algorithms

### 9.1. Pseudocode Examples
- Inner Product of Two Vectors
- Computing the Frobenius Norm
- Matrix Multiplication
- Block Matrices

### 9.2. Algorithm Efficiency
- Smaller Flop Count Is Not Always Better
- Measuring Truncation Error

### 9.3. The Solution to Upper and Lower Triangular Systems

### 9.4. The Thomas Algorithm

### 9.5. Chapter Summary

### 9.6. Problems
- 9.6.1. MATLAB Problems

## 10. Conditioning of Problems and Stability of Algorithms

### 10.1. Why Do We Need Numerical Linear Algebra?

### 10.2. Computation Error
- Forward Error
- Backward Error

### 10.3. Algorithm Stability
- Examples of Unstable Algorithms

### 10.4. Conditioning of a Problem

### 10.5. Perturbation Analysis for Solving a Linear System

### 10.6. Properties of the Matrix Condition Number

### 10.7. MATLAB Computation of a Matrix Condition Number

### 10.8. Estimating the Condition Number

### 10.9. Introduction to Perturbation Analysis of Eigenvalue Problems

### 10.10. Chapter Summary

### 10.11. Problems
- 10.11.1. MATLAB Problems

## 11. Gaussian Elimination and the LU Decomposition

### 11.1. LU Decomposition

### 11.2. Using LU to Solve Equations

### 11.3. Elementary Row Matrices

### 11.4. Derivation of the LU Decomposition
- Colon Notation
- The LU Decomposition Algorithm
- LU Decomposition Flop Count

### 11.5. Gaussian Elimination with Partial Pivoting
- Derivation of PA=LU
- Algorithm for Gaussian Elimination with Partial Pivoting

### 11.6. Using the LU Decomposition to Solve $Ax = b$, $1 \leq i \leq k$

### 11.7. Finding $A^{-1}$

### 11.8. Stability and Efficiency of Gaussian Elimination

### 11.9. Iterative Refinement

### 11.10. Chapter Summary

### 11.11. Problems
- 11.11.1. MATLAB Problems
12. Linear System Applications 241
12.1. Fourier Series 241
  12.1.1. The Square Wave 243
12.2. Finite Difference Approximations 244
  12.2.1. Steady-State Heat and Diffusion 245
12.3. Least-Squares Polynomial Fitting 247
  12.3.1. Normal Equations 249
12.4. Cubic Spline Interpolation 252
12.5. Chapter Summary 256
12.6. Problems 257
  12.6.1. MATLAB Problems 260

13. Important Special Systems 263
13.1. Tridiagonal Systems 263
13.2. Symmetric Positive Definite Matrices 267
  13.2.1. Applications 269
13.3. The Cholesky Decomposition 269
  13.3.1. Computing the Cholesky Decomposition 270
  13.3.2. Efficiency 272
  13.3.3. Solving $Ax = b$ If $A$ Is Positive Definite 272
  13.3.4. Stability 273
13.4. Chapter Summary 273
13.5. Problems 274
  13.5.1. MATLAB Problems 277

14. Gram-Schmidt Orthonormalization 281
14.1. The Gram-Schmidt Process 281
14.3. The QR Decomposition 287
  14.3.1. Efficiency 289
  14.3.2. Stability 290
14.4. Applications of the QR Decomposition 290
  14.4.1. Computing the Determinant 291
  14.4.2. Finding an Orthonormal Basis for the Range of a Matrix 291
14.5. Chapter Summary 292
14.6. Problems 292
  14.6.1. MATLAB Problems 293

15. The Singular Value Decomposition 299
15.1. The SVD Theorem 299
15.2. Using the SVD to Determine Properties of a Matrix 302
  15.2.1. The Four Fundamental Subspaces of a Matrix 304
15.3. SVD and Matrix Norms 306
15.4. Geometric Interpretation of the SVD 307
15.5. Computing the SVD Using MATLAB 308
15.6. Computing $A^{-1}$ 309
15.7. Image Compression Using the SVD 310
  15.7.1. Image Compression Using MATLAB 311
  15.7.2. Additional Uses 313
15.8. Final Comments 314
15.9. Chapter Summary 314
15.10. Problems 316
  15.10.1. MATLAB Problems 317

16. Least-Squares Problems 321
16.1. Existence and Uniqueness of Least-Squares Solutions 322
  16.1.1. Existence and Uniqueness Theorem 322
  16.1.2. Normal Equations and Least-Squares Solutions 324
  16.1.3. The Pseudoinverse, $m \geq n$ 324
  16.1.4. The Pseudoinverse, $m<n$ 325
16.2. Solving Overdetermined Least-Squares Problems 325
  16.2.1. Using the Normal Equations 326
  16.2.2. Using the QR Decomposition 327
  16.2.3. Using the SVD 329
  16.2.4. Remark on Curve Fitting 332
16.3. Conditioning of Least-Squares Problems 332
  16.3.1. Sensitivity when using the Normal Equations 333
16.4. Rank-Deficient Least-Squares Problems 333
  16.4.1. Efficiency 338
16.5. Underdetermined Linear Systems 338
  16.5.1. Efficiency 341
16.6. Chapter Summary 341
16.7. Problems 342
  16.7.1. MATLAB Problems 343

17. Implementing the QR Decomposition 351
17.1. Review of the QR Decomposition Using Gram-Schmidt 351
17.2. Givens Rotations 352
  17.2.1. Zeroing a Particular Entry in a Vector 353
17.3. Creating a Sequence of Zeros in a Vector Using Givens Rotations 355
17.4. Product of a Givens Matrix with a General Matrix 356
17.5. Zeroing-Out Column Entries in a Matrix Using Givens Rotations 357
17.6. Accurate Computation of the Givens Parameters 358
22. Large Sparse Eigenvalue Problems

22.1. The Power Method

22.2. Eigenvalue Computation Using the Arnoldi Process

22.3. The Implicitly Restarted Arnoldi Method

22.4. Eigenvalue Computation Using the Lanczos Process

23. Computing the Singular Value Decomposition

A. Complex Numbers

B. Mathematical Induction

C. Chebyshev Polynomials
