

**OPTIMAL PILOT BUS SELECTION
FOR THE SECONDARY VOLTAGE
CONTROL USING PARALLELISM**

Michal Kopček

Universitätsverlag Ilmenau
2013

CONTENTS

List of symbols.....	9
Introduction.....	10
1. Power system and its control.....	12
1.1 Characteristics of the power system.....	12
1.2 ES specifications from the point of control.....	13
1.3 Interconnected power systems	14
1.4 Classification of buses in ES.....	16
1.5 Power system control.....	18
1.5.1 Electric power quality control.....	18
1.5.2 Control of voltage in ES	19
1.5.3 Mathematical description of the secondary voltage control.....	23
1.5.4 Physical basics of the secondary voltage control.....	27
2. Theoretical outcomes for pilot buses selection.....	30
2.1 Basic terminology.....	31
2.1.1 Selected purpose functions	31
2.1.2 Matrix of sensitivity coefficients	33
2.1.3 Calculation of the purpose function.....	36
2.1.4 Multi-criterion purpose function.....	38
2.2 Methods of pilot buses selection.....	40
2.2.1 Exhaustive enumeration of the state space	41
2.2.2 Simulated annealing.....	42
2.2.3 Method of local search.....	43
2.2.4 Method of extended local search	44
2.2.5 Method of global search	44

2.2.6	Greedy algorithm	45
2.2.7	Less-greedy algorithm	46
2.2.8	Two-phase technology	47
2.2.9	Concept of electrical distance	50
2.2.10	Concept of decomposition – decentralized control	50
2.2.11	Operative selection.....	51
2.2.12	Methods of reduction of candidates number for pilot buses	52
2.3	Genetic algorithms	56
2.3.1	Principle of genetic algorithms	57
2.3.2	Applicability of genetic algorithms.....	61
3.	Formulation of subject and objectives	64
3.1	Fundamentals	64
3.2	Scientific objectives	65
4.	System of optimal pilot buses selection.....	67
4.1	MODES Software	67
4.2	Grid computing	68
4.3	Parallel genetic algorithms	71
4.4	Design and implementation of architecture.....	72
4.4.1	Coding of the chromosome	74
4.4.2	GA Master.....	75
4.4.3	GA Slave.....	80
4.4.4	Database.....	84
4.4.5	Conclusion	91
5.	Experimental verification of system designed	94
5.1	Definition of state space size.....	94

5.2	Verification of the contribution of parallel chromosomes processing	99
5.3	Sensitivity threshold value coefficient	102
5.4	Task processing via genetic algorithm	106
5.4.1	Searching for one optimal pilot bus ($n = 1$)	107
5.4.2	Searching the optimal pair of pilot buses ($n = 2$)	111
5.4.3	Searching the optimal triplet of pilot buses ($n = 3$)	112
5.4.4	Searching of the optimal sextuplet of pilot buses ($n = 6$)	115
5.4.5	Evaluation	119
5.5	Verification of parallel genetic algorithm functionality	119
5.6	Description of the experimental system set	127
5.7	Evaluation	130
	Conclusion	131
	Annex A Graph completening Table 5	142
	Annex B Characteristics of CPU load	143
