PREFACE	xiii
ACKNOWLEDGMENTS	xv
PART I METHODS	1
1 The Basic Method	3
1.1 The Probabilistic Method, 3	
1.2 Graph Theory, 5	
1.3 Combinatorics, 9	
1.4 Combinatorial Number Theory, 11	
1.5 Disjoint Pairs, 12	
1.6 Independent Sets and List Coloring, 13	
1.7 Exercises, 16	
<i>The Erdős–Ko–Rado Theorem, 18</i>	
2 Linearity of Expectation	19
2.1 Basics, 19	
2.2 Splitting Graphs, 20	
2.3 Two Quickies, 22	
2.4 Balancing Vectors, 23	

- 2.5 Unbalancing Lights, 25
- 2.6 Without Coin Flips, 26
- 2.7 Exercises, 27

Bregman's Theorem, 29

3 Alterations 31

- 3.1 Ramsey Numbers, 31
- 3.2 Independent Sets, 33
- 3.3 Combinatorial Geometry, 34
- 3.4 Packing, 35
- 3.5 Greedy Coloring, 36
- 3.6 Continuous Time, 38
- 3.7 Exercises, 41

High Girth and High Chromatic Number, 43

4 The Second Moment 45

- 4.1 Basics, 45
- 4.2 Number Theory, 46
- 4.3 More Basics, 49
- 4.4 Random Graphs, 51
- 4.5 Clique Number, 55
- 4.6 Distinct Sums, 57
- 4.7 The Rödl nibble, 58
- 4.8 Exercises, 64

Hamiltonian Paths, 65

5 The Local Lemma 69

- 5.1 The Lemma, 69
- 5.2 Property B and Multicolored Sets of Real Numbers, 72
- 5.3 Lower Bounds for Ramsey Numbers, 73
- 5.4 A Geometric Result, 75
- 5.5 The Linear Arboricity of Graphs, 76
- 5.6 Latin Transversals, 80
- 5.7 Moser's Fix-It Algorithm, 81
- 5.8 Exercises, 87

Directed Cycles, 88

6 Correlation Inequalities 89

- 6.1 The Four Functions Theorem of Ahlswede and Daykin, 90
- 6.2 The FKG Inequality, 93
- 6.3 Monotone Properties, 94

6.4	Linear Extensions of Partially Ordered Sets,	97
6.5	Exercises,	99
	<i>Turán's Theorem,</i>	<i>100</i>
7	Martingales and Tight Concentration	103
7.1	Definitions,	103
7.2	Large Deviations,	105
7.3	Chromatic Number,	107
7.4	Two General Settings,	109
7.5	Four Illustrations,	113
7.6	Talagrand's Inequality,	116
7.7	Applications of Talagrand's Inequality,	119
7.8	Kim–Vu Polynomial Concentration,	121
7.9	Exercises,	123
	<i>Weierstrass Approximation Theorem,</i>	<i>124</i>
8	The Poisson Paradigm	127
8.1	The Janson Inequalities,	127
8.2	The Proofs,	129
8.3	Brun's Sieve,	132
8.4	Large Deviations,	135
8.5	Counting Extensions,	137
8.6	Counting Representations,	139
8.7	Further Inequalities,	142
8.8	Exercises,	143
	<i>Local Coloring,</i>	<i>144</i>
9	Quasirandomness	147
9.1	The Quadratic Residue Tournaments,	148
9.2	Eigenvalues and Expanders,	151
9.3	Quasirandom Graphs,	157
9.4	Szemerédi's Regularity Lemma,	165
9.5	Graphons,	170
9.6	Exercises,	172
	<i>Random Walks,</i>	<i>174</i>
PART II	TOPICS	177
10	Random Graphs	179
10.1	Subgraphs,	180

- 10.2 Clique Number, 183
- 10.3 Chromatic Number, 184
- 10.4 Zero–One Laws, 186
- 10.5 Exercises, 193

Counting Subgraphs, 195

11 The Erdős–Rényi Phase Transition 197

- 11.1 An Overview, 197
- 11.2 Three Processes, 199
- 11.3 The Galton–Watson Branching Process, 201
- 11.4 Analysis of the Poisson Branching Process, 202
- 11.5 The Graph Branching Model, 204
- 11.6 The Graph and Poisson Processes Compared, 205
- 11.7 The Parametrization Explained, 207
- 11.8 The Subcritical Regions, 208
- 11.9 The Supercritical Regimes, 209
- 11.10 The Critical Window, 212
- 11.11 Analogies to Classical Percolation Theory, 214
- 11.12 Exercises, 219

Long paths in the supercritical regime, 220

12 Circuit Complexity 223

- 12.1 Preliminaries, 223
- 12.2 Random Restrictions and Bounded-Depth Circuits, 225
- 12.3 More on Bounded-Depth Circuits, 229
- 12.4 Monotone Circuits, 232
- 12.5 Formulae, 235
- 12.6 Exercises, 236

Maximal Antichains, 237

13 Discrepancy 239

- 13.1 Basics, 239
- 13.2 Six Standard Deviations Suffice, 241
- 13.3 Linear and Hereditary Discrepancy, 245
- 13.4 Lower Bounds, 248
- 13.5 The Beck–Fiala Theorem, 250
- 13.6 Exercises, 251

Unbalancing Lights, 253

14 Geometry 255

- 14.1 The Greatest Angle Among Points in Euclidean Spaces, 256

14.2	Empty Triangles Determined by Points in the Plane,	257
14.3	Geometrical Realizations of Sign Matrices,	259
14.4	ϵ -Nets and VC-Dimensions of Range Spaces,	261
14.5	Dual Shatter Functions and Discrepancy,	266
14.6	Exercises,	269
	<i>Efficient Packing,</i>	<i>270</i>
15	Codes, Games, and Entropy	273
15.1	Codes,	273
15.2	Liar Game,	276
15.3	Tenure Game,	278
15.4	Balancing Vector Game,	279
15.5	Nonadaptive Algorithms,	281
15.6	Half Liar Game,	282
15.7	Entropy,	284
15.8	Exercises,	289
	<i>An Extremal Graph,</i>	<i>291</i>
16	Derandomization	293
16.1	The Method of Conditional Probabilities,	293
16.2	d -Wise Independent Random Variables in Small Sample Spaces,	297
16.3	Exercises,	302
	<i>Crossing Numbers, Incidences, Sums and Products,</i>	<i>303</i>
17	Graph Property Testing	307
17.1	Property Testing,	307
17.2	Testing Colorability,	308
17.3	Testing Triangle-Freeness,	312
17.4	Characterizing the Testable Graph Properties,	314
17.5	Exercises,	316
	<i>Turán Numbers and Dependent Random Choice,</i>	<i>317</i>
Appendix A	Bounding of Large Deviations	321
A.1	Chernoff Bounds,	321
A.2	Lower Bounds,	330
A.3	Exercises,	334
	<i>Triangle-Free Graphs Have Large Independence Numbers,</i>	<i>336</i>

Appendix B Paul Erdős	339
B.1 Papers, 339	
B.2 Conjectures, 341	
B.3 On Erdős, 342	
B.4 Uncle Paul, 343	
<i>The Rich Get Richer, 346</i>	
Appendix C Hints to Selected Exercises	349
