

# The Oxford Handbook of Small Superconductors

Edited by  
A.V. Narlikar

**OXFORD**  
UNIVERSITY PRESS

# Contents

Plan of the Book and Acknowledgments	xi
List of Contributors	xvii
<b>Part I Introduction and Basic Studies</b>	
<b>1 Small Superconductors—Introduction</b>	<b>3</b>
<i>A.V. Narlikar</i>	
1.1 Two characteristic length scales of superconductors	3
1.2 Two size effects in superconductors	8
1.3 QSE, quantum fluctuations, Anderson limit, parity and shell effects, etc.	9
1.4 Factors influencing small size effects	12
1.5 Behavior of nanowires and ultra-thin films	16
1.6 Vortex states of small superconductors	20
1.7 Proximity effect behaviors	25
1.8 Synthesis of small superconductors	28
1.9 Summary and outlook	33
<b>2 Local-Scale Spectroscopic Studies of Vortex Organization in Mesoscopic Superconductors</b>	<b>40</b>
<i>D. Roditchev, T. Cren, C. Brun, and M. Milošević</i>	
2.1 Basic properties of quantum vortices in superconductors	41
2.2 Experimental requirements for studying vortex confinement phenomena	51
2.3 Observation of confinement effects on vortices	54
2.4 Conclusions and outlook	76
<b>3 Multi-Vortex States in Mesoscopic Superconductors</b>	<b>81</b>
<i>N. Kokubo, S. Okayasu, and K. Kadowaki</i>	
3.1 Introduction	81
3.2 Magnetic imaging of superconducting vortices	83
3.3 Observation of multi-vortex states in mesoscopic superconductors	87
3.4 Summary and outlook	103
<b>4 Proximity Effect: A New Insight from <i>In Situ</i> Fabricated Hybrid Nanostructures</b>	<b>108</b>
<i>J.C. Cuevas, D. Roditchev, T. Cren, and C. Brun</i>	
4.1 An introduction to proximity effect	109
4.2 <i>In situ</i> fabricated hybrid nanostructures and tunneling spectroscopy	123
4.3 Proximity effect in a correlated 2D disordered metal	126

vi Contents

4.4	Proximity effect in diffusive SNS junctions	129
4.5	Proximity Josephson vortices	131
4.6	Proximity effect between two different superconductors	135
4.7	Conclusions and outlook	139
5	<b>Andreev Reflection and Related Studies in Low-Dimensional Superconducting Systems</b>	144
	<i>D. Daghero, G.A. Ummarino, and R.S. Gonnelli</i>	
5.1	Basics of point-contact Andreev-reflection spectroscopy	145
5.2	Andreev reflection in a nutshell	150
5.3	Length scales in mesoscopic systems	155
5.4	Examples of PCARS in superconductors with reduced dimensionality	165
5.5	Summary and outlook	177
6	<b>Topological Superconductors and Majorana Fermions</b>	183
	<i>Y.Y. Li and J.F. Jia</i>	
6.1	Introduction	183
6.2	TI/SC heterostructures	185
6.3	Nanowire/SC junctions	195
6.4	FM atomic chain on SCs	199
6.5	Summary and outlook	202
7	<b>Surface and Interface Superconductivity</b>	207
	<i>S. Gariglio, M.S. Scheurer, J. Schmalian, A.M.R.V.L. Monteiro, S. Goswami, and A.D. Caviglia</i>	
7.1	Introduction	207
7.2	Superconductivity in two dimensions	208
7.3	Superconductivity in ultra-thin metals on Si(111)	210
7.4	Superconductivity at the LaAlO <sub>3</sub> /SrTiO <sub>3</sub> interface	215
7.5	Summary and outlook	231
<b>Part II Materials Aspects</b>		
8	<b>Mesoscopic Effects in Superconductor–Ferromagnet Hybrids</b>	241
	<i>G. Karapetrov, S.A. Moore, and M. Iavarone</i>	
8.1	Theories underpinning S/F hybrid structures	242
8.2	Domain wall and reverse domain superconductivity	249
8.3	Vortex behavior in planar S/F hybrids	256
8.4	Conclusions and outlook	261
9	<b>Theoretical Study of THz Emission from HTS Cuprate</b>	265
	<i>H. Asai</i>	
9.1	Intrinsic Josephson junction (IJJ) in HTS cuprate	266
9.2	THz emitter utilizing IJJs	271

9.3	Temperature inhomogeneity in IJJ-based THz emitter	273
9.4	THz emission from IJJs with temperature inhomogeneity	274
9.5	Summary	286
<b>10</b>	<b>Micromagnetic Measurements on Electrochemically Grown Mesoscopic Superconductors</b>	<b>291</b>
	<i>A. Müller, S.E.C. Dale, and M.A. Engbarth</i>	
10.1	Introduction	291
10.2	Electrochemical preparation of $\beta$ -tin samples	296
10.3	Measurement techniques and sample preparation	300
10.4	Summary and outlook	317
<b>11</b>	<b>Growth and Characterization of HTSc Nanowires and Nanoribbons</b>	<b>321</b>
	<i>M.R. Koblischka</i>	
11.1	HTSc nanowires prepared by the template method	321
11.2	HTSc nanowires prepared by electrospinning	326
11.3	Use of HTSc nanowires as building blocks	341
11.4	Summary and outlook	342
<b>12</b>	<b>Mesoscopic Structures and Their Effects on High-<math>T_c</math> Superconductivity</b>	<b>347</b>
	<i>H. Zhang</i>	
12.1	Introduction and motivation	348
12.2	Model	350
12.3	Calculating results and discussion	352
12.4	Strain between two blocks and its effect on superconductivity	356
12.5	Carrier-compensated system and mesoscopic structures	359
12.6	Existence of fixed triangle (local mesoscopic structure) by x-ray diffraction	363
12.7	The existence of the fixed triangle (local mesoscopic structure) demonstrated by Raman spectroscopy	365
12.8	Low wave number evidence about mesoscopic structure	368
12.9	Discussions	369
12.10	Summary and outlook	375
<b>13</b>	<b>Magnetic Flux Avalanches in Superconducting Films with Mesoscopic Artificial Patterns</b>	<b>379</b>
	<i>M. Motta, A.V. Silhanek, and W.A. Ortiz</i>	
13.1	Avalanches in superconductors	380
13.2	Artificial pinning centers in superconducting films	391
13.3	Effects of the antidot geometry and lattice symmetry in flux avalanches	399
13.4	Summary and outlook	406

**Part III Device Technology**

<b>14 Superconducting Spintronics and Devices</b>	415
<i>M.G. Blamire and J.W.A. Robinson</i>	
14.1 Conventional spintronics	416
14.2 The rationale for superconducting spintronics	417
14.3 S/F proximity effects and Josephson junctions	418
14.4 Spin transport in the superconducting state	421
14.5 Superconducting spintronic memory	423
14.6 Superconducting spintronic logic	424
14.7 Superconductor/ferromagnet thermoelectric devices	424
14.8 Materials and device structures	425
14.9 Summary and outlook	427
<b>15 Barriers in Josephson Junctions: An Overview</b>	432
<i>M.P. Weides</i>	
15.1 Josephson effect	433
15.2 Tunnel barriers	443
15.3 Metallic barriers	449
15.4 Semiconducting barriers	450
15.5 Magnetic barriers	451
15.6 Summary and outlook	453
<b>16 Hybrid Superconducting Devices Based on Quantum Wires</b>	459
<i>K. Grove-Rasmussen, T.S. Jespersen, A. Jellinggaard, and J. Nygård</i>	
16.1 Introduction	459
16.2 Experimental aspects of hybrid devices	460
16.3 Superconducting junctions with normal quantum dots	463
16.4 Superconductivity-enhanced spectroscopy of quantum dots	467
16.5 Sub-gap states in hybrid quantum dots	468
16.6 Non-local signals in hybrid double quantum dots	472
16.7 Epitaxial superconducting contacts to nanowires	477
16.8 Summary and outlook	482
<b>17 Superconducting Nanodevices</b>	492
<i>J. Gallop and L. Hao</i>	
17.1 The drive to the nanoscale	492
17.2 Types of Josephson junction	494

17.3	NanoSQUIDs imply improved energy sensitivity	503
17.4	Applications	506
17.5	Future developments	516
17.6	Summary and outlook	520
<b>18</b>	<b>Superconducting Quantum Bits of Information—Coherence and Design Improvements</b>	<b>524</b>
	<i>J. Bylander</i>	
18.1	Introduction: superconducting qubits	524
18.2	Single-qubit Hamiltonians and reference frames	526
18.3	Decoherence. Characterization and mitigation of noise	529
18.4	Superconducting qubits	539
18.5	Circuit quantum electrodynamics (c-QED)	553
18.6	Second-generation superconducting qubits	557
18.7	Summary and outlook	561
<b>19</b>	<b>NanoSQUIDs Applied to the Investigation of Small Magnetic Systems</b>	<b>567</b>
	<i>M. J. Martínez-Pérez, R. Kleiner, and D. Koelle</i>	
19.1	SQUID basics	567
19.2	NanoSQUIDs	572
19.3	Measurement techniques using nanoSQUIDs	590
19.4	Particle positioning	592
19.5	Applications	596
19.6	Summary and outlook	600
	<b>Index</b>	<b>607</b>
