Abstract	vi
Zusammenfassung	viii
1 Introduction	1
1.1 Motivation	1
1.2 Thesis outline	4
2 Theory	7
2.1 Basics of fluid dynamics	7
2.1.1 Fundamentals	7
2.1.2 Properties of dispersed phase flow	10
2.1.3 Single particle motion	12
2.1.4 Curvilinear motion and inertial impaction	19
2.2 Silicon solar cell principles	23
2.2.1 Structure and work principle of crystalline silicon solar cells	23
2.2.2 Current-voltage characteristic	24
2.2.3 Losses in silicon solar cells related to metallization	28
2.2.4 Metal-semiconductor contact	30
2.2.5 Electrical contact resistivity determination	33
2.2.6 Influence of surface morphology on contact resistivity	36
3 Technological fundamentals	39
3.1 Aerosol jet printing	39
3.1.1 Nebulization	39
3.1.2 Virtual impaction	44
3.1.3 Aerosol jet print head and deposition	45
3.2 The photo-form process	49
3.3 Manufacturing of standard silicon solar cells with seed and plate contacts	52
3.4 Seed layer metallization ink	57
3.4.1 Inorganic components	57
3.4.2 Organic vehicle system	61

3.4.3	Preparation of the seed layer ink	62
4	Experimental	65
4.1	Printer setups	65
4.1.1	Aerosol jet printers	65
4.1.2	Ink jet printer	65
4.2	Experimental procedures	67
4.2.1	Determination of the aerosol mass flow rate	67
4.2.2	Fabrication of micro-structured glass print heads	67
4.2.3	Imaging of the liquid fluid flow	69
4.2.4	Visualization of the aerosol flow	69
4.2.5	Printing of test structures and solar cell front-side grids	70
4.2.6	Ink fluids	71
4.2.7	Ink jet printing of single droplets	71
4.2.8	Choice of silicon wafer substrates	72
4.3	Characterization methods	74
4.3.1	Optical laser confocal microscopy	74
4.3.2	Image analysis of printed structures	75
4.3.3	Surface roughness determination	77
4.3.4	Contact angle goniometry	78
4.3.5	Semi-automated transfer-length measurement	78
5	Development of an analytical flow model for aerosol jet printing	81
6	Results	87
6.1	Aerosol generation and supply	87
6.1.1	Performance of the nebulizer spray nozzle	87
6.1.2	Collision nebulizer performance	87
6.1.3	Droplet size distribution	91
6.2	Fluid-dynamic focusing at the transition region	93
6.3	Laminar aerosol flow released into ambient air	94
6.4	Investigations on the aerosol jet diameter and line width	97
6.4.1	Impact of the aerosol flow	97
6.4.2	Variation of the gas flow ratio	100
6.4.3	Radial rearrangement of droplets and line quality	103
6.5	Aerosol jet print head development	104
6.5.1	Geometry of transition region and print nozzle	104
6.5.2	Homogeneity of aerosol flow with 10-nozzle print heads	105
6.5.3	Further upscale for photovoltaic production	111
6.5.4	Quantification of ink losses in 10-nozzle AJP systems	112

6.6	Wetting of ink on silicon wafer surfaces	115
6.6.1	Ink jet printing of single droplets	115
6.6.2	Printing of continuous lines	120
6.6.3	Surface free energy of silicon nitride coated wafers . .	124
6.6.4	Surface tension of organic vehicles	127
6.7	Application of AJP to solar cell metallization	129
6.7.1	Aspects of multiple aerosol jet printed seed layers . . .	129
6.7.2	Contact resistivity to lowly doped emitters	130
6.7.3	Results of solar cells with aerosol jet printed seed layer	134
7	Discussion of the results	139
7.1	Aerosol supply	139
7.2	Fluid-dynamic focusing mechanism	140
7.3	Released laminar aerosol jet in air	140
7.4	Influencing variables on the aerosol jet printed line	141
7.4.1	Influence of the flow velocity and the nozzle to substrate distance	141
7.4.2	Influence of the gas flow ratio on the printed lines . .	141
7.5	Upscale of aerosol jet print heads	143
7.5.1	Shape of the transition region	143
7.5.2	Effects on homogeneity	144
7.5.3	Production scale aerosol jet print head	145
7.5.4	Ink efficiency of aerosol jet print process	146
7.6	Influence of wetting	146
7.7	Application to solar cell metallization	148
7.7.1	Aspects of multiple printed layers	148
7.7.2	Contact formation to lowly doped emitters	150
7.7.3	Solar cell results	150
8	Conclusion and outlook	153
8.1	Conclusion	153
8.2	Outlook	156
9	Theses to the doctoral thesis	159
	List of principal symbols and abbreviations	161
	Bibliography	178
	List of publications	179
