Detection, Estimation, and Modulation Theory
Part II. Nonlinear Modulation Theory

HARRY L. VAN TREES
George Mason University
# Contents

## 1 Introduction

- 1.1 Review of Part I  
- 1.2 Topical Outline  
- 1.3 Organization of the Book  

*References*

## 2 Optimum Demodulators

- 2.1 Model of an Angle-Modulation System  
- 2.2 An Intuitive Approach to Demodulator Design  
- 2.3 Maximum A-Posterior Estimates  
- 2.4 Optimum Demodulator Structures  
- 2.5 System Design and Performance  
  - 2.5.1 Derivation of the Unrealizable Mean-Square Error  
  - 2.5.2 Filter Design  
- 2.6 Practical Considerations  
  - 2.6.1 Oscillator Model  
  - 2.6.2 Post-loop Filtering  
  - 2.6.3 Loop Noise Bandwidth  
  - 2.6.4 External VCO Control  
- 2.7 Summary  
- 2.8 Problems  

*References*
## 3 Phase Estimation: The Synchronization Problem

3.1 Oscillator Instability Analysis
3.2 Nonlinear Analysis in the Absence of Noise
   3.2.1 First-Order Loop: Constant-Frequency Offset
   3.2.2 Second-Order Loop: Constant-Frequency Offset
   3.2.3 Second-Order Loop: Constant Acceleration
3.3 Nonlinear Analysis in the Presence of Noise
   3.3.1 Fokker-Planck Techniques
   3.3.2 Perturbation and Approximation Techniques
3.4 Related Topics
   3.4.1 Optimum Tracking Systems: Time-varying
   3.4.2 Optimum Tracking Systems: Time-invariant
   3.4.3 Minimum Acquisition Time Systems
   3.4.4 Phase Detector Design
   3.4.5 Noisy Acquisition
   3.4.6 Bandpass Limiters before the Loop
3.5 Summary: Synchronization Problems
3.6 Problems

## 4 Frequency Modulation

4.1 Model for Frequency-Modulation System
4.2 Optimum FM Demodulators: Threshold Constraint
   4.2.1 Conventional Wiener Approach
   4.2.2 Simplified Wiener Approach
   4.2.3 State-variable Approach
   4.2.4 Examples of FM System Design
4.3 Optimum FM Demodulators: Bandwidth Constraint
4.4 Summary
   4.4.1 FM System Design Summary
   4.4.2 Phase-modulation Systems
   4.4.3 Comparison of AM, FM, and PM Systems
4.5 Problems

## 5 Optimum Angle-Modulation Systems

5.1 Optimum Pre-emphasis Filters: Threshold Constraint
5.2 Optimum Pre-emphasis Filters: Bandwidth Constraint
5.3 Suboptimum Pre-emphasis Filters
  5.3.1 Design of Suboptimum Systems
  5.3.2 Summary
5.4 Bounds on the Performance of Analog Message-Transmission Systems
  5.4.1 Rate-distortion Bound
  5.4.2 Performance Comparison: Infinite-bandwidth Channel
  5.4.3 Performance Comparison: Bandwidth Constraint
  5.4.4 Summary
5.5 Conventional Discriminators
  5.5.1 Weak Noise Analysis
  5.5.2 Threshold Behavior
5.6 Summary
5.7 Problems
References

6 Comparison of Transmission Systems
  6.1 Sampled and Quantized Systems
  6.2 Quantizer Analysis
  6.3 Binary Uncoded Systems
  6.4 Orthogonal Signals
  6.5 Coded Digital Systems
  6.6 Summary
  6.7 Problems
References

7 Nonlinear Estimation Theory: Alternative Approaches
  7.1 Differential-Equation Approach to MAP Estimation
    7.1.1 MAP Interval Estimation
    7.1.2 Realizable MAP Point Estimation and Invariant Imbedding
  7.2 Markov Process Approach
  7.3 Summary
  7.4 Problems
References
8 Analog Communication over Randomly Time-varying Channels 230

8.1 Model and Possible Approaches 230
  8.1.1 Model 230
  8.1.2 Possible Approaches 232

8.2 Derivation of the Optimum Receiver: Rayleigh Channels 236
  8.2.1 MAP Equations: Memoryless Rayleigh Channel 237
  8.2.2 Angle Modulation: Rayleigh Channel 240
  8.2.3 Joint Estimation of Message and Channel Processes 242
  8.2.4 Realizable MAP and MMSE Estimators 244

8.3 Performance Bounds and Approximations 249
  8.3.1 Mean-square Error Bound 249
  8.3.2 Perfect-measurement Bound 252
  8.3.3 Receiver Design and Performance in Slowly Fluctuating Channels: Quasi-Stationary Analysis 253

8.4 Summary 260
8.5 Problems 261
References 264

9 Discussion 265

9.1 Related Topics 265
  9.1.1 Multiplex Systems 265
  9.1.2 Diversity Systems 271
  9.1.3 Synchronization and Tracking Systems 274

9.2 Summary of Part II 275
9.3 Preview of Part III and Array Processing 278
9.4 Problems 280
References 284

Appendix: State Variable Analysis Procedures 286
