

# EXTENDED CONTENTS

<b>HOW TO USE THIS BOOK</b>	<b>XV</b>
Who is the book aimed at?	xv
How do I teach with a book that has a fictional narrative?	xv
Can I dip into the book?	xvi
What online resources are there?	xvi
<b>PROLOGUE: THE DYING STARS</b>	<b>1</b>
<b>1 WHY YOU NEED SCIENCE: THE BEGINNING AND THE END</b>	<b>7</b>
1.1. Will you love me now?	10
1.2. How science works	14
1.2.1. The research process	14
1.2.2. Science as a life skill	21
1.3. Research methods	21
1.3.1. Correlational research methods	22
1.3.2. Experimental research methods	24
1.3.3. Practice, order and randomization	27
1.3.4. Piecing it all together	31
1.4. Why we need science	34
Key terms	36
JIG:SAW's puzzles	36
<b>2 REPORTING RESEARCH, VARIABLES AND MEASUREMENT: BREAKING THE LAW</b>	<b>39</b>
2.1. Writing up research	43
2.2. Maths and statistical notation	49
2.3. Variables and measurement	55
2.3.1. The conspiracy unfolds	55
2.3.2. Qualitative and quantitative data	57

2.3.3. Levels of measurement	60
2.3.4. Measurement error	66
2.3.5. Validity and reliability	68
<b>Key terms</b>	<b>70</b>
<b>JIG:SAW's puzzles</b>	<b>70</b>
<b>3 SUMMARIZING DATA: SHE LOVES ME NOT?</b>	<b>75</b>
<b>3.1. Frequency distributions</b>	<b>81</b>
3.1.1. Tabulated frequency distributions	81
3.1.2. Grouped frequency distributions	89
3.1.3. Graphical frequency distributions	94
3.1.4. Idealized distributions	100
3.1.5. Histograms for nominal and ordinal data	100
<b>3.2. Throwing shapes</b>	<b>103</b>
<b>Key terms</b>	<b>107</b>
<b>JIG:SAW's puzzles</b>	<b>107</b>
<b>4 FITTING MODELS (CENTRAL TENDENCY): SOMEWHERE IN THE MIDDLE</b>	<b>111</b>
<b>4.1. Statistical models</b>	<b>116</b>
4.1.1. From the dead	116
4.1.2. Why do we need statistical models?	117
4.1.3. Sample size	118
4.1.4. The one and only statistical model	120
<b>4.2. Central tendency</b>	<b>124</b>
4.2.1. The mode	126
4.2.2. The median	128
4.2.3. The mean	129
<b>4.3. The 'fit' of the mean: variance</b>	<b>135</b>
4.3.1. The fit of the mean	136
4.3.2. Estimating the fit of the mean from a sample	141
4.3.3. Outliers and variance	148
<b>4.4. Dispersion</b>	<b>149</b>
4.4.1. The standard deviation as an indicator of dispersion	149
4.4.2. The range and interquartile range	151
<b>Key terms</b>	<b>155</b>
<b>JIG:SAW's puzzles</b>	<b>155</b>
<b>5 PRESENTING DATA: AGGRESSIVE PERFECTOR</b>	<b>157</b>
<b>5.1. Types of graphs</b>	<b>161</b>
<b>5.2. Another perfect day</b>	<b>162</b>
<b>5.3. The art of presenting data</b>	<b>166</b>
5.3.1. What makes a good graph?	166
5.3.2. Bar graphs	170
5.3.3. Line graphs	172

5.3.4. Boxplots (box-whisker diagrams)	173
5.3.5. Graphing relationships: the scatterplot	176
5.3.6. Pie charts	177
<b>Key terms</b>	<b>181</b>
<b>JIG:SAW's puzzles</b>	<b>182</b>
<b>6 Z-SCORES: THE WOLF IS LOOSE</b>	<b>189</b>
6.1. Interpreting raw scores	193
6.2. Standardizing a score	196
6.3. Using z-scores to compare distributions	200
6.4. Using z-scores to compare scores	206
6.5. z-scores for samples	209
Key terms	212
JIG:SAW's puzzles	212
<b>7 PROBABILITY: THE BRIDGE OF DEATH</b>	<b>215</b>
7.1. Probability	218
7.1.1. Classical probability	219
7.1.2. Empirical probability	225
7.2. Probability and frequency distributions	228
7.2.1. The discs of death	228
7.2.2. Probability density functions	230
7.2.3. Probability and the normal distribution	233
7.2.4. The probability of a score greater than $x$	236
7.2.5. The probability of a score less than $x$ : The tunnels of death	238
7.2.6. The probability of a score between two values: The catapults of death	242
7.3. Conditional probability: Deathscotch	248
Key terms	255
JIG:SAW's puzzles	255
<b>8 INFERENTIAL STATISTICS: GOING BEYOND THE DATA: HUMILIATIVE</b>	<b>257</b>
8.1. Estimating parameters	262
8.2. How well does a sample represent the population?	267
8.2.1. Sampling distributions	267
8.2.2. The standard error	271
8.2.3. The central limit theorem	274
8.3. Confidence intervals	278
8.3.1. Calculating confidence intervals	281
8.3.2. Calculating other confidence intervals	286
8.3.3. Confidence intervals in small samples	287
8.4. Inferential statistics	291
Key terms	296
JIG:SAW's puzzles	296

<b>14 THE GENERAL LINEAR MODEL: RED FIRE COMING OUT FROM HIS GILLS</b>	<b>477</b>
<b>14.1. The linear model with one predictor</b>	<b>481</b>
14.1.1. Estimating parameters	484
14.1.2. Interpreting regression coefficients	491
14.1.3. Standardized regression coefficients	492
14.1.4. The standard error of $b$	492
14.1.5. Confidence Intervals for $b$	494
14.1.6. Test statistic for $b$	495
14.1.7. Assessing the goodness of fit	496
14.1.8. Fitting a linear model using a computer	499
14.1.9. When this fails	501
<b>14.2. Bias in the linear model</b>	<b>503</b>
<b>14.3. A general procedure for fitting linear models</b>	<b>506</b>
<b>14.4. Models with several predictors</b>	<b>507</b>
14.4.1. The expanded linear model	510
14.4.2. Methods for entering predictors	512
14.4.3. Estimating parameters	513
14.4.4. Using a computer to build more complex models	514
<b>14.5. Robust regression</b>	<b>522</b>
14.5.1. Bayes factors for linear models	522
<b>Key terms</b>	<b>525</b>
<b>JIG:SAW's puzzles</b>	<b>525</b>
<b>15 COMPARING TWO MEANS: ROCK OR BUST</b>	<b>527</b>
<b>15.1. Testing differences between means: The rationale</b>	<b>532</b>
<b>15.2. Means and the linear model</b>	<b>534</b>
15.2.1. Estimating the model parameters	537
15.2.2. How the model works	540
15.2.3. Testing the model parameters	541
15.2.4. The independent $t$ -test on a computer	545
15.2.5. Assumptions of the model	546
<b>15.3. Everything you believe is wrong</b>	<b>547</b>
<b>15.4. The paired-samples <math>t</math>-test</b>	<b>549</b>
15.4.1. The paired-samples $t$ -test on a computer	553
<b>15.5. Alternative approaches</b>	<b>556</b>
15.5.1. Effect sizes	556
15.5.2. Robust tests of two means	558
15.5.3. Bayes factors for comparing two means	560
<b>Key terms</b>	<b>562</b>
<b>JIG:SAW's puzzles</b>	<b>562</b>
<b>16 COMPARING SEVERAL MEANS: FAITH IN OTHERS</b>	<b>567</b>
<b>16.1. General procedure for comparing means</b>	<b>575</b>
<b>16.2. Comparing several means with the linear model</b>	<b>576</b>

16.2.1. Dummy coding	577
16.2.2. The $F$ -ratio as a test of means	580
16.2.3. The total sum of squares ( $SS_T$ )	582
16.2.4. The model sum of squares ( $SS_M$ )	584
16.2.5. The residual sum of squares ( $SS_R$ )	586
16.2.6. Partitioning variance	587
16.2.7. Mean squares	588
16.2.8. The $F$ -ratio	588
16.2.9. Comparing several means using a computer	590
<b>16.3. Contrast coding</b>	<b>592</b>
16.3.1. Generating contrasts	593
16.3.2. Devising weights	596
16.3.3. Contrasts and the linear model	597
16.3.4. <i>Post hoc</i> procedures	602
16.3.5. Contrasts and <i>post hoc</i> tests using a computer	603
<b>16.4. Storm of memories</b>	<b>605</b>
<b>16.5. Repeated-measures designs</b>	<b>609</b>
16.5.1. The total sum of squares, $SS_T$	611
16.5.2. The within-participant variance, $SS_W$	611
16.5.3. The model sum of squares, $SS_M$	614
16.5.4. The residual sum of squares, $SS_R$	614
16.5.5. Mean squares and the $F$ -ratio	615
16.5.6. Repeated-measures designs using a computer	618
<b>16.6. Alternative approaches</b>	<b>619</b>
16.6.1. Effect sizes	619
16.6.2. Robust tests of several means	621
16.6.3. Bayesian analysis of several means	623
<b>16.7. The invisible man</b>	<b>625</b>
Key terms	627
JIG:SAW's puzzles	628

## **17 FACTORIAL DESIGNS: PRAYER OF TRANSFORMATION** **633**

<b>17.1. Factorial designs</b>	<b>638</b>
<b>17.2. General procedure and assumptions</b>	<b>640</b>
<b>17.3. Analysing factorial designs</b>	<b>640</b>
17.3.1. Factorial designs and the linear model	640
17.3.2. The fit of the model	646
17.3.3. Factorial designs on a computer	656
<b>17.4. From the pinnacle to the pit</b>	<b>658</b>
<b>17.5. Alternative approaches</b>	<b>658</b>
17.5.1. Calculating effect sizes	658
17.5.2. Robust analysis of factorial designs	660
17.5.3. Bayes factors for factorial designs	661
<b>17.6. Interpreting interaction effects</b>	<b>662</b>
Key terms	670
JIG:SAW's puzzles	670

<b>EPILOGUE: THE GENIAL NIGHT: SI MOMENTUM REQUIRIS, CIRCUMSPICE</b>	<b>677</b>
<b>APPENDIX</b>	<b>685</b>
<b>A.1. The standard normal distribution</b>	<b>685</b>
<b>A.2. The <i>t</i>-distribution</b>	<b>691</b>
<b>A.3. Critical values of the chi-square distribution</b>	<b>693</b>
<b>A.4. Critical values of the <i>F</i>-distribution</b>	<b>694</b>
