Peptides of Poisonous Amanita Mushrooms

With 78 Figures

Springer-Verlag
New York Berlin Heidelberg
London Paris Tokyo
Contents

Introduction .............................................. 1
Mushrooms Causing Death in Rare Cases ............. 3

Deadly Poisonous Amanita Mushrooms and Their Constituents

Toadstools Accumulating Amatoxins .................. 10
Poisoning by Amatoxins ................................ 13
Two Centuries of Amanita Research ................... 15
Recognition, Isolation, and Characterization of the Peptide Toxins .......... 22
Recognition of Toxic Components ....................... 22
Chromatographic Procedures ........................... 22
  Paper Chromatography 22; Thin-Layer Chromatography 22; Visualization 25; Color Reaction on Newsprint 26; Liquid Chromatography 27
Quantification of Amatoxins and Phallotoxins ........ 28
  Quantitative Chromatography 28; High-Performance Liquid Chromatography 29; Radioimmunoassay 29; Inhibition of RNA Polymerase 29; Phallotoxins and Actin 30
Quantities of Toxic Cyclopeptides in Various Mushrooms 31
Isolation and Characterization of the Cyclopeptides 36
Isolation ................................................. 36
Chemical Properties .................................... 37
Physical Properties ..................................... 39
  Mass Spectroscopy 39; Ultraviolet Spectroscopy 39; Fluorescence and Phosphorescence 42; Circular Dichroism (CD) and Optical-Rotatory Dispersion (ORD) 42; Nuclear Magnetic-Resonance (NMR) Spectroscopy 44
Toxicological Properties ............................... 45
## Contents

**The Chemistry of the Amatoxins, Phallotoxins and Virotoxins** ........................................ 47

Common Features ........................................ 47
The Hydroxyamino Acids .................................... 48

*Elucidation of the Structure and Synthesis of the Non-Lactonizing Members* 49; *Elucidation of the Structure and Synthesis of the Lactonizing Amino Acids* 49

Amatoxins ........................................ 52
Structure and Conformation ................................ 52
Structure-Activity Relationships .......................... 55

*The 6'-Hydroxyl Group* 56; *Molecular Shape* 56; *The Sulfoxide Moiety* 56; *The Side Chains* 58; *Chemical Modifications at the 6'-Hydroxy-Indole Moiety* 63

Protein Conjugates of Amatoxins .......................... 67

*Methods of Conjugation* 67

Radioactively-Labelled Amatoxins .......................... 69

Phallotoxins ........................................ 69
Structure and Conformation ................................ 69

*Spatial Structure of Phallotoxins* 72

Structure-Activity Relationships .......................... 74

*Molecular Shape* 74; *The Role of the Side Chains* 75; *Chemical Modifications* 75; *Synthetic Analogues* 83;

Conclusions ........................................ 85

Virotoxins ........................................ 88
Structure ........................................ 88
Structure-Activity Relationships .......................... 89
Presumptive Derivation from Phallotoxins ................. 91

Synthetic Approaches at the Toxic Peptides ................. 92
Synthesis of Thioethers of L-Tryptophan ................... 92
Peptide Synthesis .................................... 93

*Cyclization* 94

Synthesis of Phallotoxins ................................ 94

*Total Synthesis of Phalloin* 98; *The Savige-Fontana Approach* 98

Analogues of Amanin .................................... 100

**Molecular Pathology of the Amanita Peptides** ............ 101

Uptake of the Toxins by the Liver .......................... 101
Amatoxins ........................................ 104
Mechanism of Amatoxin Intoxication .......................... 104
Pathological Symptoms of Intoxication 104; Inhibition of RNA Synthesis 104; The Amatoxin-RNA-Polymerase II Complex 106; The Amatoxin-Binding Subunit 108; Other Amatoxin-Binding Proteins 109; The Mechanism of Polymerase Inhibition 110; Susceptibility of RNA Polymers from Different Origin 111

Amatoxins in Cell Biology .................................. 113
  Morphological and Biochemical Effects in Vivo 113; Effect of Amatoxins on Isolated Cells 116; Amatoxin-Resistant Cell Lines and Organisms 121; Amanitin-Resistant Drosophila 123

Amatoxins in Virus Research ............................... 124
  Deoxyriboviruses 124; Riboviruses 125

Amatoxins in Physiology .................................. 126
  Hormonal Induction of Protein Synthesis 127

Phallotoxins and Virotoxins ................................ 129
  Molecular Mechanism of Toxicity .......................... 129
  Phenomenology of Intoxication 130; Interaction of Phalloidin with Actin 135

The Pathological Events, a Consequence of the Phallotoxin-Actin Interaction .................................. 147
  Swelling of the Liver, Vacuolization 148; Secretory Processes 150 Inhibition of Protein Synthesis 152; Effects on Stimulatory Transmission 154

Phalloidin and Motility of Cells ............................ 155
  Influence on Muscle Contraction 156; Influence on Cytoplasmic Streaming and Motility of Non-Muscle Cells 158

Fluorescent Phallotoxins as Tools in Biological Research
  Visualization of F-Actin 162; Eicosanoids and Actin Fibers 164; Actin Structure and Cell Transformation 165; Miscellaneous Studies 168

Tolerance and Protective Agents ............................ 173
  Tolerance 173; Antagonists, Protectors 176

Non-Toxic Peptides from Amanita phalloides ................ 181

Antamanide and Other Cycloamanides ....................... 181
  Antamanide .............................................. 181
    Isolation and Properties 181; Structure of Antamanide 182; Synthesis of Antamanide and Analogues 185; Metal-Ion-Complexing Properties 186; Complexing Aptitude
Additional Cycloamanides ........................................... 205
Phallolysin ................................................................. 207
Hemolytically-Active Proteins from Mushrooms and Bacteria 207
Purification and Characterization of Phallolysin ............... 208
Mechanism of Hemolytic Activity ................................. 208
Toxicity 208; Mechanism of Action 209; Similarity of the Hemolytic Effects of Phallotoxin and Staphylococcal α-Toxin 210
Retrospectives and Outlook ........................................... 211
References ................................................................. 213
Subject Index ............................................................. 249
