Preface ix

1 Fluid Properties from the Speed and Absorption of Sound 1
   1.1 Introduction 1
   1.2 Thermodynamic properties from the speed of sound 1
   1.3 Kinetic information from the speed and absorption of sound 14
   1.4 Transport properties from sound absorption at a surface 18
   References 19
   Notes 21

2 Fundamental Theory 22
   2.1 Introduction 22
   2.2 Propagation in an idealized fluid 23
   2.3 Propagation in a dissipative fluid 27
   2.4 Boundary conditions 36
   References 50
   Notes 50

3 Cavities 52
   3.1 Introduction 52
   3.2 The normal modes of an acoustic cavity 52
   3.3 Forced oscillations 54
   3.4 Boundary conditions 57
   3.5 The parallelepiped 63
   3.6 The cylindrical cavity 65
   3.7 The spherical enclosure 74
   3.8 The high-frequency interferometer 81
   References 88
   Notes 89
## 4 Relaxation Phenomena

4.1 Introduction
4.2 Translational relaxation
4.3 Molecular thermal relaxation
4.4 Chemical and structural relaxation

References
Notes

## 5 Generation and Detection of Sound

5.1 Introduction
5.2 Radiation from point and piston sources
5.3 Vibrating elements
5.4 The piezoelectric effect
5.5 Capacitance transducers
5.6 Moving-coil transducers
5.7 Photoacoustic excitation
5.8 Waveguides

References
Notes

## 6 Experimental Methods 1: Steady-state Techniques

6.1 Introduction
6.2 The single-transducer interferometer
6.3 The double-transducer interferometer
6.4 Spherical resonators
6.5 Cylindrical resonators
6.6 Numerical methods
6.7 Choice of methods

References
Notes

## 7 Experimental Methods 2: Transient Techniques

7.1 Introduction
7.2 Pulse methods
7.3 Reverberation methods

References
Notes
Appendix 1: Properties of Some Mathematical Functions 235
A1.1 Cylindrical Bessel functions \( J_m(z) \) 235
A1.2 Spherical Bessel functions \( j_l(z) \) 237
A1.3 The associated Legendre functions \( P_l^m(\eta) \) 238
References 239

Appendix 2: Notation 240
