1 The protein folding problem
THOMAS E. CREIGHTON

1. The problem 1
2. The stable conformational states of proteins 1
   2.1 The unfolded state (U) 2
   2.2 The fully folded, native state (N) 4
   2.3 The so-called ‘molten globule’ state 4
3. General properties of protein folding transitions 5
   3.1 Stability of the folded state 5
   3.2 Co-operativity of folding 8
4. Kinetic aspects of folding 9
   4.1 Experimental evidence for kinetic determination of folding 9
   4.2 Models of folding 11
5. Experimental observations of protein unfolding and refolding 15
   5.1 Kinetic analysis of complex reactions 15
   5.2 Protein unfolding 17
   5.3 Protein refolding 18
6. A general scheme for protein folding 21
References 22

2 Early stages of protein folding
HEINRICH RODER and GÜLNUR A. ELÖVE

1. Introduction 26
2. Hydrogen exchange and NMR approaches 27
   2.1 Model peptides and denatured proteins 27
   2.2 Native proteins 28
3. Folding events on the millisecond time-scale
   3.1 Time-resolved CD
   3.2 Amide protection
   3.3 Fluorescence
   3.4 Initial stages of cytochrome c folding
4. Intermediates with partially assembled tertiary structure
   4.1 Cytochrome c
   4.2 Hen lysozyme
   4.3 Ribonuclease A
   4.4 Barnase
   4.5 Ubiquitin
   4.6 Dihydrofolate reductase
   4.7 Formation of ligand binding sites during folding
5. Late stages
   5.1 Parallel folding pathways
   5.2 Haem ligation in cytochrome c folding
6. Concluding remarks
Acknowledgements

3 The contribution of the molten globule model
   HENRIETTE CHRISTENSEN and ROGER H. PAIN
1. The molten globule model
2. Experimentally observed molten globules
   2.1 The stable molten globule
   2.2 The kinetic molten globule
3. Molten globules as earlier intermediates?
   3.1 The framework model
   3.2 The molten globule as a model for early folding
4. The molten globule as a functional entity
   4.1 Protein transport
## 4 Proline isomerization as a rate-limiting step

**BARRY T. NALL**

1. The importance of kinetics 80
2. Simplicity at equilibrium but complex kinetics 82
3. Proline isomerization and slow folding reactions: the hypothesis 83
4. Experimental evidence 85
   4.1 Comparison of properties of proline isomerization and slow folding 85
   4.2 Double-jump assays 85
   4.3 Isomer-specific proteolysis 89
   4.4 Site-directed mutants 90
   4.5 Effects of structure 92
   4.6 Ribonuclease A 92
5. Structural intermediates and slow refolding reactions 94
6. Are slow phases real folding reactions? 95
7. Enzymatic catalysis of proline isomerization and slow folding reactions 96
Acknowledgements 98
References 99

## 5 The formation of native disulfide bonds

**H. F. GILBERT**

1. The nature of the problem 104
2. Chemistry of the disulfide bond 105
   2.1 Thiol/disulfide exchange 106
   2.2 Equilibria and kinetics 106
   2.3 Competing equilibria 108
   2.4 Effects of structure on equilibria and kinetics 109
3. The mechanism(s) of oxidative protein folding 111
   3.1 The pathway is complex 112
   3.2 Early folding steps—do disulfides dictate the structure or vice versa? 114
   3.3 The role of non-native structure during oxidative folding 115
# 7 Assembly of multi-subunit structures

**Nicholas C. Price**
