The Editors

Chapter 1
Chemoprevention of Lung Cancer by Isothiocyanates
Stephen S. Hecht

Abstract
Introduction
Inhibition of NNK-Induced Lung Tumorigenesis by PEITC
Inhibition of BaP-Induced Lung Tumorigenesis by BITC
Effects of Watercress Consumption on NNK Metabolism in Smokers
Summary
Acknowledgments
References

Chapter 2
Isothiocyanates as Inhibitors of Esophageal Cancer
Gary D. Stoner and Mark A. Morse

Introduction
Methods
Chemicals
Animals
Experimental Diets
Tumorigenesis Bioassays
Analysis of DNA Adducts
Statistical Analysis
Results
Effects of PEITC on NMBA-Induced Esophageal Tumorigenesis
Effects of Various Arylalkyl Isothiocyanates on NMBA-Induced Esophageal Tumorigenesis
Effects of Dietary Isothiocyanates on NMBA-Induced Methylation
Discussion
Acknowledgments
References
Chapter 6

Estrogens, Phytoestrogens, and Breast Cancer

Robert Clarke, Leena Hilakivi-Clarke, Elizabeth Cho, Mattie R. James, and Fabio Leonessa

Introduction

Estrogens and Phytoestrogens

What Is an Estrogen?

What Is a Phytoestrogen?

Where Are Compounds with Phytoestrogenic Activity?

The Interactions of Estrogens and Phytoestrogens with Estrogen Receptors

Structure-Activity Relationships of Estrogen Receptor Ligands

Relative Potencies

Bioavailability

Agonists, Partial Agonists, and Antagonists

The Nature and Diversity of Estrogenic Responses

What Is an Estrogenic Response?

The Diversity of Estrogenic Responses

What Is a Phytoestrogenic Response?

Estrogenic Stimuli in the Normal Breast

Estrogens and the Normal Breast

Estrogen and Mammary Gland Development

Estrogenic Exposures throughout Life

Sources of Estrogens

Estrogenic Stimuli in the Malignant Breast

Early Life and Breast Cancer

Early Phytoestrogen Exposure and Mammary Tumors

Mechanisms of Action of Phytoestrogens in Breast Cancer

Conclusions and Future Prospects

Acknowledgments

References

Chapter 7

Soy Isoflavonoids and Cancer Prevention: Underlying Biochemical and Pharmacological Issues

Stephen Barnes, Jeff Sfakianos, Lori Coward, and Marion Kirk

Abstract

Introduction

Materials and Methods

Materials
Chapter 8
Quercetin as a Modulator of the Cellular Neoplastic Phenotype: Effects on the Expression of Mutated H-ras and p53 in Rodent and Human Cells
Matias A. Avila, José Cansado, K. William Harter, Juan A. Velasco, and Vicente Notario

Introduction ......................................................... 101
Materials and Methods ............................................. 102
    Cell Lines, Culture Conditions, and Quercetin Treatment ....... 102
    Growth Rate, Clonogenic Assays, and FACS Analysis ......... 102
    Northern Blot Hybridization Analysis ........................ 102
    Protein Analyses .............................................. 102
    Other Experimental Procedures ............................... 103
Results .............................................................. 103
    Effect of Quercetin on ras-Transformed NIH/3T3 Cells .... 103
    Effect of Quercetin on Human Mammary Carcinoma Cells Carrying Mutant p53 ............ 105
Discussion .......................................................... 107
Acknowledgments ................................................... 108
References .......................................................... 109

Chapter 9
Effects of Monoterpenes and Mevinolin on Murine Colon Tumor CT-26 in Vitro and Its Hepatic “Metastases” in Vivo
Selwyn A. Broitman, John Wilkinson IV, Sonia Cerda, and Steven K. Branch

Introduction .......................................................... 111
Materials and Methods ............................................. 118
    Cell Culture .................................................... 118
    Preparation of Lipoprotein-Deficient Serum (LPDS) ........ 118
    Preparation of MEV ............................................ 118
    Protein Determinations ....................................... 118
    Inhibition of Cell Growth with MEV and Perillyl Alcohol Combinations .... 118
    Cholesterol Synthesis Assay ................................ 119
    Protein Isoprenylation Assay ................................ 119
    Tissue Culture for Mouse Implantation ....................... 120
    Diets Used for Animal Studies .............................. 120
    Direct Hepatic Implantation ..................
Chapter 13
Recent Results in the Organosulfur and Organoselenium Chemistry of Genus
Allium and Brassica Plants: Relevance for Cancer Prevention ............... 155
Eric Block

Introduction .................................................. 155
Organosulfur and Organoselenium Compounds in Allium and Brassica spp. 155
Selenium Biochemistry ..................................... 156
Analysis of Selenium in Allium spp. ................................ 158
Headspace Analysis ......................................... 159
Selenoamino Acid Analysis .................................. 160
Human Garlic Breath Analysis ................................. 163
Cancer Preventative Activity ................................ 163
  Epidemiological Evidence ................................ 163
  Antibacterial Activity Relevant to Cancer Prevention 164
  Cytotoxicity and Anti-Tumor Activity .................. 165
  Antioxidant Activity .................................... 166
  Tumor Promotion Activity ............................... 166
Acknowledgment ............................................. 166
References .................................................. 166

Chapter 14
Allium Vegetables and the Potential for Chemoprevention of Cancer ........ 171
Michael J. Wargovich and Naoto Uda

Introduction .................................................. 171
Early Studies Indicating Possible Cancer Prevention Effects for Organosulfur Compounds .......................... 172
Further Evidence for Chemoprevention: Effects of Allium Volatiles in Other Animal Models and Carcinogen Detoxification Systems ................ 173
Recent Studies on the Effects of Allium-Derived Organosulfur Compounds on Carcinogen Metabolism .................... 174
Epidemiological and Clinical Studies Related to the Cancer Preventives Effects of Allium Vegetables ............................ 175
Acknowledgments ............................................. 176
References .................................................. 176

Chapter 15
The Attributes of Selenium-Enriched Garlic in Cancer Prevention ........... 179
Clement Ip and Donald J. Lisk

Introduction .................................................. 179
Cultivation of High Selenium Garlic ............................................ 180
Studies of Mammary Cancer Prevention by High Selenium Garlic ........... 180
The Anticarcinogenic Efficacy of High Selenium Garlic Is Primarily Attributable to the Effect of Selenium ....................... 181
Nutritional Bioavailability of Selenium from High Selenium Garlic ........ 182
Tissue Selenium Accumulation and Tolerance Studies in Rats Fed High Selenium Garlic ................................. 184
Discussion ................................................... 185
Chapter 16
Is There a Need to Change the American Diet?
Johanna Dwyer

Introduction .................................................. 189
Science Base for Evaluating Evidence ...................... 189
Expert Recommendations .................................. 190
What Experts Recommend Today ............................ 190
Are We Meeting Expert Recommendations? .............. 190
Are New Recommendations Needed? ....................... 191
Next Steps .................................................... 195
Four Paths .................................................... 195
Wait for More Evidence to Accumulate and Let Dietary Intakes “Float” 195
Increase Intakes of Foods Naturally Containing Phytochemicals 195
Make Phytochemical Fortified Foods More Available and Eat Them 196
Promote Phytochemical Supplements ........................ 196
Conclusions ................................................... 196
Acknowledgment ............................................. 197
References .................................................... 197

Chapter 17
The National 5 A Day for Better Health Program
Jerianne Heimendinger and Daria Chapelsky

Introduction and Rationale .................................. 199
Program Design ............................................... 200
Program Components ........................................ 201
Media .......................................................... 202
Retail .......................................................... 202
Community ..................................................... 203
Research and Evaluation ..................................... 203
Program Materials ............................................ 204
Conclusion ..................................................... 204
References ..................................................... 205

Chapter 18
Nutritional Implications of Dietary Phytochemicals
Mark Messina and Virginia Messina

The Golden Ages of Nutrition ............................... 207
Phytochemicals and Their Impact on Dietary Guidelines 208
Changing Views of Diet and Foods .......................... 209
Phytochemical Supplements and Phytochemical Food Fortification 210
Summary ....................................................... 211
References ..................................................... 211
Chapter 19
Designer Foods: Is There a Role for Supplementation/Fortification? .......................... 213
John W. Finley

Designer Foods .................................................. 213
Dietary Guidelines .............................................. 215
Materials with Perceived Efficacy ......................... 219
Conclusion ....................................................... 220
References ....................................................... 220

Chapter 20
Wheat Bran, Colon Cancer, and Breast Cancer: What Do We Have? What Do We Need? .......... 221
Richard M. Black

Introduction ..................................................... 221
Colon Cancer .................................................... 222
Breast Cancer ................................................... 224
Phytochemicals ............................................... 227
Conclusion ....................................................... 227
References ....................................................... 228

Chapter 21
Diet, Nutrition, and Cancer Prevention: Research Opportunities, Approaches, and Pitfalls .................. 231
Chung S. Yang, Barbara C. Pence, Michael J. Wargovich, and Janelle M. Landau

Introduction ..................................................... 231
Important, but Not Well Funded, Research Field .......... 231
Common Weaknesses and Problems in Grant Applications .... 232
Ways to Strengthen Research on Diet and Cancer Prevention ............................................. 233
New Opportunities and Approaches .......................... 234
Approaches to Increase Funding ............................... 235
   Justifying the Importance of the Research .................. 235
   Increasing Support and Fund Raising ....................... 235
   Strengthening the Study Sections and Review Panels ...... 235
   Writing Better Grant Applications .......................... 236
   Keeping the Lines of Communication Open ................. 236
Acknowledgment .................................................. 236
References ....................................................... 236
Appendix 1 ....................................................... 237
Appendix 2 ....................................................... 237
Appendix 3 ....................................................... 238
Appendix 4 ....................................................... 238

Abstracts ......................................................... 239

Index .......................................................... 325
