CHAPTER 1
DEVELOPING THREE-DIMENSIONAL MODELS OF ION CHANNEL PROTEINS
H. ROBERT GUY and STEWART R. DURELL

1. Introduction ......................................................... 1
2. Physical Factors Influencing Membrane Protein Structure and Modeling ............................................. 3
3. Modeling Ion Channel Protein Structures ....................... 5
   3.1. Overview ...................................................... 5
   3.2. Phase I: Transmembrane Topology, Functional Mechanisms, and Ligand Binding Sites ....................... 6
   3.3. Phase II: General Position and Orientation of Transmembrane Segments ........................................ 8
   3.4. Phase III: Approximation of Atomic Positions .......... 12
4. Channels Formed by Small α-Helical Proteins .................. 13
   4.1. General Concepts .......................................... 13
   4.2. 8-Lysin ..................................................... 15
   4.3. Magainin ..................................................... 15
   4.4. Cecropin and Sarcotoxin ................................... 16
   4.5. Pardaxin ..................................................... 18
   4.6. Amyloid β-Protein .......................................... 20
5. Water-Soluble Proteins that Form Ion Channels ............... 20
6. Phase I Models of Voltage-Gated Channels ...................... 21
   6.1. Models and Rationale ....................................... 21
   6.2. Experimental Verification of Models ....................... 23
7. Potassium Channels .................................................. 25
   7.1. Phase III Models of Ion-Selective P Segments ........... 25
   7.2. Segments Surrounding K+ Channel P Segments .......... 30
8. Models of Na+ and Ca2+ Channel P Segments .................... 32
CHAPTER 2

STRUCTURAL AND FUNCTIONAL DIVERSITY OF VOLTAGE-ACTIVATED CALCIUM CHANNELS

MICHEL DE WAARD, CHRISTINA A. GURNETT, and KEVIN P. CAMPBELL

1. Introduction .................................................. 41
   1.1. Voltage-Dependent Ca\(^{2+}\) Channels as Pathways for Intracellular Ca\(^{2+}\) Elevation ................. 41
   1.2. Biophysical Diversity of Voltage-Dependent Ca\(^{2+}\) Channels .................. 42
   1.3. Pharmacological Diversity of Voltage-Dependent Ca\(^{2+}\) Channels ........... 44
   1.4. Correlation between Ca\(^{2+}\) Channel Type and Function in Excitable and Nonexcitable Cells .............. 47
2. Subunit Structure of Voltage-Dependent Ca\(^{2+}\) Channels ............... 48
   2.1. Purification of the Skeletal Muscle L-Type Ca\(^{2+}\) Channel ................. 48
   2.2. Purification of the N-Type Ca\(^{2+}\) Channel Complex .................. 50
   2.3. Characterization of Other Voltage-Dependent Ca\(^{2+}\) Channels ........... 51
3. Molecular Diversity of Voltage-Dependent Ca\(^{2+}\) Channels ............... 52
   3.1. Cloning of Ca\(^{2+}\) Channel Subunits .................. 52
   3.2. Subunit Identification of Native L- and N-Type Ca\(^{2+}\) Channels ........... 57
   3.3. Membrane Topology of Voltage-Dependent Ca\(^{2+}\) Channel Subunits .......... 57
4. Functional Reconstitution of Purified Voltage-Dependent Ca\(^{2+}\) Channels .... 59
   4.1. Functional Properties of Purified Ca\(^{2+}\) Channels in Bilayers ............ 59
   4.2. Similarities between Purified L- and N-Type Ca\(^{2+}\) Channels ............... 62
5. Expression of Ca\(^{2+}\) Channels .................................. 63
   5.1. Functional Classification of Cloned \(\alpha_1\) Subunits .................. 63
   5.2. Role of Ancillary Subunits .................. 67
6. Subunit Interaction Sites in Voltage-Dependent Ca\(^{2+}\) Channels .......... 70
   6.1. Identification of an Alpha 1 Interaction Domain (AID) that Binds \(\beta\) Subunits .................. 70
   6.2. Identification of a Beta Interaction Domain (BID) that Interacts with AID ............... 71
   6.3. Perspectives on the Primary Subunit Interaction Sites .................. 75
7. Summary and Conclusions .................................. 75
   7.1. Secondary Subunit Interaction Sites .................. 76
   7.2. Interactions of Ca\(^{2+}\) Channels with Other Cellular Proteins .......... 76
   7.3. Functional Map of Ca\(^{2+}\) Channels .................. 78
8. References ........................................ 79
CHAPTER 3
THE GABA A RECEPTORS: FROM SUBUNITS TO DIVERSE FUNCTIONS
H. MOHLER, J. M. FRITSCHY, B. LÜSCHER, U. RUDOLPH, J. BENSON, and D. BENKE

1. Introduction ................................................................. 89
2. Subunit Structure and Stoichiometry ...................................... 90
3. Functional Domains of Subunits .......................................... 90
   3.1. GABA Site ............................................................ 90
   3.2. Benzodiazepine Site ............................................... 91
   3.3. Loreclezole Site .................................................. 92
   3.4. Barbiturate Site .................................................. 92
   3.5. Steroid Site ........................................................ 92
   3.6. PicROTOXIN Site ................................................ 93
   3.7. Novel Drug Binding Sites ...................................... 93
   3.8. Phosphorylation Sites .......................................... 93
4. Receptor Diversity in Vivo by Heterooligomerization .............. 94
   4.1. GABA A Receptors Containing the α1β2γ2 Subunits .......... 94
   4.2. GABA A Receptors Containing α2β3γ2 Subunits or α3β3γ2 Subunits ................................................................. 96
   4.3. GABA A Receptors Containing the α5 Subunit ................. 97
   4.4. GABA A Receptors Containing the α4 or α6 Subunits ....... 98
   4.5. GABA A Receptors Containing the δ Subunit ................. 98
   4.6. GABA A Receptors with Unusual Subunit Combinations .... 99
   4.7. GABA Receptors Containing the ρ1 or ρ2 Subunits .......... 99
5. Drug Responses of GABA A Receptor Subtypes ....................... 100
6. Regulation of Receptor Expression .................................... 101
7. Analysis of Gene Promoters .............................................. 102
8. Animals with Mutations in GABA A Receptor Subunits ............ 102
9. GABA A Receptors in Disease .......................................... 103
   9.1. Epilepsy ............................................................ 103
   9.2. Huntington’s Disease ........................................... 104
   9.3. Angelman’s Syndrome .......................................... 105
10. Outlook ................................................................ 105
11. References ................................................................ 106

CHAPTER 4
STRUCTURE AND REGULATION OF THE AMILORIDE-SENSITIVE EPITHELIAL SODIUM CHANNEL
PASCAL BARBRY and MICHEL LAZDUNSKI
1. Introduction ................................................................. 115
2. Pharmacology .............................................................. 116
3.2. Conservation of Primary and Secondary Structure 178
3.3. Site-Directed Mutagenesis of Charged Residues in Yeast VDAC 179
4.1. Magnitude of the Structural Change Associated with Voltage Gating 180
4.2. Location of the Mobile Domain 183
4.3. Identification and Localization of the Voltage Sensor 184
4.4. Activation Energy and the Gating Mechanism 187
4.5. Ion Flow and the Gating Process 189
5. Comparison of Proposed Gating Mechanisms 190
5.1. Corking the Bottle 190
5.2. Forming a Jelly Roll 191
5.3. Tilting the Strands 191
5.4. Deforming the Cylinder 192
6. Regulation 192
6.1. Amplification of the Voltage Dependence 192
6.2. Action of the VDAC Modulator 193
6.3. Action of Nucleotides 195
6.4. Colloidal Osmotic Pressure 195
6.5. Inhibition by Metal Hydroxides 196
7. Auto-Directed Insertion 196
8. Role of VDAC in Cell Function 197
9. Conclusions 198
10. References 199

CHAPTER 6
ION CHANNELS AND MEMBRANE RECEPTORS IN FOLLICLE-ENCLOSED XENOPUS OOCYTES
ROGELIO O. ARELLANO, RICHARD M. WOODWARD, and RICARDO MILEDI
1. Introduction 203
2. The Follicle-Enclosed Xenopus Oocyte 204
2.1. Morphology 204
2.2. Electrophysiological Methods 206
2.3. Defolliculation Methods 208
3. Follicle Ion Currents: An Overview 209
3.1. Oocyte-Based Ca\(^{2+}\)-Dependent Cl\(^{-}\) Currents 209
3.2. Follicular Cell–Based Muscarinic Responses (ACh-K\(^{+}\), \(I_{in}\), \(S_{in}\), and \(S_{out}\) Currents) 210
3.3. Follicular Cell–Based Responses Mediated by cAMP (cAMP-K\(^{+}\), \(S_{in}\), and \(S_{out}\) Currents) 212
3.4. Follicular Cell–Based Currents Elicited by Changes in Osmolarity 213
4. Follicular Cell K\(^{+}\) Currents 215
### CONTENTS

4.1. cAMP-K⁺ Currents ........................................ 215  
4.2. K⁺ Currents Activated by ACh, ATP, or All ............. 225  
4.3. Modulation of cAMP-K⁺ Current by Muscarinic and Purinergic Receptors ........................................ 226  

5. Follicular Cell Cl⁻ Currents .................................. 229  
5.1. Osmodependent Sᵢn Currents ............................... 230  
5.2. Sᵢn and Fᵢn Currents Are Not Ca²⁺-Dependent .......... 231  
5.3. Cellular Localization of Sᵢn and Fᵢn Channels ......... 232  
5.4. Intrinsic Differences between Sᵢn and Fᵢn Currents .... 235  
5.5. Membrane Receptors Involved in Cl⁻ Current Generation .... 236  
5.6. Receptor-Channel Coupling Mechanisms .................. 238  

6. Follicular Cell Ion Currents Elicited by Changes in Osmolarity .......... 244  
6.1. Localization of the Elements Involved in I_Cl(osm) Generation 245  
6.2. Relationship between I_Cl(osm) and Sᵢn Currents ......... 250  

7. Potential Physiological Roles ................................... 250  
7.1. Regulation of Oocyte Maturation ........................... 251  
7.2. Regulation of Follicle Volume .............................. 251  

8. Conclusions .................................................. 252  
9. References .................................................... 253  

---

**CHAPTER 7**  
CALCIUM-ACTIVATED POTASSIUM CHANNELS IN ADRENAL CHROMAFFIN CELLS  
CHRISTOPHER J. LINGLE, CHRISTOPHER R. SOLARO, MURALI PRAKRIYA, and JIU PING DING  

1. Introduction .................................................. 261  
1.1. General Physiology and Pharmacology of BK Channels ... 262  
1.2. Molecular Biology of Ca²⁺- and Voltage-Dependent K⁺ Channels ........................................ 263  
1.3. Diversity of BK Channels ................................... 264  
1.4. Properties of BK Channels that Are Important for Defining Potential Physiological Roles ...................... 265  
1.5. Physiology and Pharmacology of SK Channels ............. 266  

2. Calcium-Dependent K⁺ Current in Chromaffin Cells ......... 267  
2.1. Rat Chromaffin Cells Express both BK and SK Ca²⁺-Dependent Currents ........................................ 267  
2.2. Rat Chromaffin Cells Express Two Variants of BK Channel .... 271  
2.3. Properties of Macroscopic Inactivating BK Current Reflect Underlying Single-Channel Characteristics .................. 274  

3. Inactivation of BKᵢ Channels: Does a “Ball and Chain” Model Apply? .......... 275  
3.1. Inactivation of BKᵢ Channels Is Rapid and Exhibits Apparent Ca²⁺ and Voltage Dependence .......................... 279  
3.2. Inactivation of BKᵢ Channels Is Trypsin-Sensitive .......... 280  
3.3. ShakerB Ball Peptides (BP) Block BK Channels ........... 280
CHAPTER 8
REGULATION OF CALCIUM RELEASE CHANNEL IN SARCOPLASMIC RETICULUM
MICHIKI KASAI and TORU IDE

1. Introduction ........................................................................................................... 303
2. Permeability of Ca\textsuperscript{2+} Channel .......................................................... 304
   2.1. Choline and Monovalent Cation Permeation .............................................. 304
   2.2. Ca\textsuperscript{2+} and Divalent Cation Permeation ........................................ 306
   2.3. Complementarity between Single-Channel and Flux Measurements ........ 307
3. Requirement of Potassium Chloride for Neutral Molecule Permeation ......... 307
   3.1. Glucose Permeation ......................................................................................... 307
   3.2. Ca\textsuperscript{2+} Permeation .............................................................................. 309
   3.3. Choline Permeation ....................................................................................... 310
   3.4. Permeation of Other Molecules .................................................................... 311
   3.5. Model of Conformational Change in the Ca\textsuperscript{2+} Channel ................. 312
4. Effects of Potassium Chloride on Regulation of Calcium Channel ............ 313
   4.1. Activation and Inhibition Sites of Ca\textsuperscript{2+} Channel .............................. 313
   4.2. Effects of KCl on Activation and Inhibition Sites for Ca\textsuperscript{2+} .......... 313
   4.3. Effects of KCl on Inhibition Sites for Ruthenium Red and Mg\textsuperscript{2+} ........ 314
5. Effect of Ryanodine ............................................................................................... 315
   5.1. Effect of Ryanodine on Pore Size ................................................................. 315
   5.2. Effect of Inhibitors on Ryanodine-Treated Channel ..................................... 320

SINGLE-CHANNEL STUDIES IN MOLLUSCAN NEURONS

MICHAEL FEJTL and DAVID O. CARPENTER

1. Introduction ........................................................................ 333
2. Voltage-Activated Currents ............................................. 334
   2.1. The Sodium Channel .................................................. 334
   2.2. The Potassium Channels ............................................. 339
