List of contributors.................................................................................................................. v
Preface ........................................................................................................................................ vii
Acknowledgements.................................................................................................................. ix

Section I.  Psychobiology of Acute and Chronic Pain

1. From acute to chronic pain: mechanisms and hypotheses
   F. Cervero and J.M.A. Laird (Madrid, Spain) ................................................................. 3

2. Quantitative experimental assessment of pain and hyperalgesia in animals and underlying neural mechanisms
   E. Carstens (Davis, CA, USA) ......................................................................................... 17

3. Nociceptive, environmental and neuroendocrine factors determining pain behaviour in animals
   A.M. Aloisi and G. Carli (Siena, Italy) ............................................................................ 33

4. Functional imaging studies of the pain system in man and animals
   C.A. Porro and M. Cavazzuti (Udine and Modena, Italy) ............................................ 47

5. Limbic processes and the affective dimension of pain
   C.R. Chapman (Seattle, WA, USA) ................................................................................ 63

II. Neuropeptides, Inflammation and Neuropathic Injuries

6. Neurogenic mechanisms and neuropeptides in chronic pain
   A. Dray (London, UK) .................................................................................................. 85

7. Peripheral opioid analgesia - facts and mechanisms
   A. Herz (Martinsried, Germany) .................................................................................. 95

8. Alterations in the functional properties of dorsal root ganglion cells with unmyelinated axons after a chronic nerve constriction in the rat
   R.H. LaMotte, Jun-ming Zhang and M. Petersen (New Haven, CT, USA and Wurzburg, Germany) ................................................................................... 105

9. Plasticity of messenger function in primary afferents following nerve injury – implications for neuropathic pain
   Z. Wiesenfeld-Hallin and X.-J. Xu (Huddinge, Sweden) .............................................. 113
10. The possible role of substance P in eliciting and modulating deep somatic pain
S. Mense, U. Hoheisel and A. Reinert (Heidelberg, Germany).......................... 125

11. Studies of the release of immunoreactive galanin and dynorphin A_1-8 in the
spinal cord of the rat
A.W. Duggan and R.C. Riley (Edinburgh)..................................................... 137

III. Neurotransmission and Plasticity

12. Cooperative mechanisms of neurotransmitter action in central nervous sensitization
W.D. Willis, K.A. Sluka, H. Rees and K.N. Westlund (Galveston, TX, USA)................................. 151

13. Neurophysiology of chronic inflammatory pain: electrophysiological recordings from spinal cord neurons in rats with prolonged acute and chronic unilateral inflammation at the ankle
Hans-Georg Schaible and Robert F. Schmidt (Würzburg, Germany).......................... 167

14. Acute mechanical hyperalgesia in the rat can be produced by coactivation of spinal ionotropic AMPA and metabotropic glutamate receptors, activation of phospholipase A_2 and generation of cyclooxygenase products
S.T. Meller, C. Dykstra and G.F. Gebhart (Iowa City, IA, USA) .................... 177

15. Involvement of glutamatergic neurotransmission and protein kinase C in spinal plasticity and the development of chronic pain
T.R. Tölle, A. Berthele, J. Schadrack and W. Zieglgänsberger (Munich, Germany) ........... 193

16. Neurobiology of spinal nociception: new concepts
J. Sandkühler (Heidelberg, Germany).......................................................... 207

17. Balances between excitatory and inhibitory events in the spinal cord and chronic pain
A.H. Dickenson (London, UK)........................................................................ 225

18. Plasticity of the nervous system at the systemic, cellular and molecular levels:
a mechanism of chronic pain and hyperalgesia
M. Zimmermann and T. Herdegen (Heidelberg, Germany)............................... 233

Subject Index ........................................................................................................ 261
