Magnetic Resonance Imaging
Physical Principles and Sequence Design

E. Mark Haacke, Ph.D.
Professor of Radiology, Electrical Engineering
and Biomedical Engineering
Washington University
St. Louis, MO
and
Professor of Physics
Case Western Reserve University
Cleveland, OH

Robert W. Brown, Ph.D.
Institute Professor of Physics
Case Western Reserve University
Cleveland, OH

Michael R. Thompson, Ph.D.
Picker International
Highland Heights, OH

Ramesh Venkatesan, D.Sc.
General Electric Medical Systems
Bangalore, India

WILEY-LISS
A JOHN WILEY & SONS, INC., PUBLICATION
New York • Chichester • Weinheim • Brisbane • Singapore • Toronto
This book is printed on acid-free paper.

Contents

1 Magnetic Resonance Imaging: A Preview .............................................. 1
  1.1 Magnetic Resonance Imaging: The Name ..................................... 1
  1.2 The Origin of Magnetic Resonance Imaging .................................. 2
  1.3 A Brief Overview of MRI Concepts ............................................. 3
    1.3.1 Fundamental Interaction of a Proton Spin with the Magnetic Field 3
    1.3.2 Equilibrium Alignment of Spin .......................................... 4
    1.3.3 Detecting the Magnetization of the System ............................. 5
    1.3.4 Magnetic Resonance Spectroscopy ...................................... 7
    1.3.5 Magnetic Resonance Imaging ............................................. 7
    1.3.6 Relaxation Times ............................................................ 8
    1.3.7 Resolution and Contrast .................................................. 9
    1.3.8 Magnetic Field Strength .................................................. 10
    1.3.9 Key Developments in Magnetic Resonance ............................ 10
  1.4 Suggested Reading ..................................................................... 13

2 Classical Response of a Single Nucleus to a Magnetic Field .............. 17
  2.1 Magnetic Moment in the Presence of a Magnetic Field ..................... 18
    2.1.1 Torque on a Current Loop in a Magnetic Field ....................... 18
    2.1.2 Magnet Toy Model ................................................................ 22
  2.2 Magnetic Moment with Spin: Equation of Motion ............................ 23
    2.2.1 Torque and Angular Momentum .......................................... 23
    2.2.2 Angular Momentum of the Proton ....................................... 24
    2.2.3 Electrons and Other Elements ........................................... 25
    2.2.4 Equation of Motion ......................................................... 26
  2.3 Precession Solution: Phase ......................................................... 27
    2.3.1 Precession via the Gyroscope Analogy .................................. 27
    2.3.2 Geometrical Representation ............................................... 28
    2.3.3 Cartesian Representation ................................................... 30
    2.3.4 Matrix Representation ....................................................... 32
    2.3.5 Complex Representations and Phase .................................... 32

3 Rotating Reference Frames and Resonance .................................... 35
  3.1 Rotating Reference Frames ......................................................... 36
  3.2 The Rotating Frame for an RF Field ........................................... 39
    3.2.1 Polarization ....................................................................... 40

xv
14 Projection Reconstruction of Images

14.1 Radial k-Space Coverage
14.1.1 Coverage of k-Space at Different Angles
14.1.2 Two Radial Fourier Transform Examples
14.1.3 Inversion for Image Reconstruction

14.2 Sampling Radial k-Space and Nyquist Limits

14.3 Projections and the Radon Transform

14.4 Methods of Projection Reconstruction with Radial Coverage
14.4.1 X-Ray Analog
14.4.2 Back-Projection Method
14.4.3 Projection Slice Theorem and the Fourier Reconstruction Method
14.4.4 Filtered Back-Projection Method
14.4.5 Reconstruction of MR Images from Radial Data

14.5 Three-Dimensional Radial k-Space Coverage

14.6 Radial Coverage Versus Cartesian k-Space Coverage
14.6.1 Image Distortion Due to Off-Resonance Effects: Cartesian Coverage Versus Radial Sampling
14.6.2 Effects of Motion
14.6.3 Cartesian Sampling of Radially Collected Data

15 Signal, Contrast and Noise

15.1 Signal and Noise
15.1.1 The Voxel Signal
15.1.2 The Noise in MRI
15.1.3 Dependence of the Noise on Imaging Parameters
15.1.4 Improving SNR by Averaging over Multiple Acquisitions
15.1.5 Measurement of $\sigma_0$ and Estimation of SNR

15.2 SNR Dependence on Imaging Parameters
15.2.1 Generalized Dependence of SNR in 3D Imaging on Imaging Parameters
15.2.2 SNR Dependence on Read Direction Parameters
15.2.3 SNR Dependence on Phase Encoding Parameters
15.2.4 SNR in 2D Imaging
15.2.5 Imaging Efficiency

15.3 Contrast, Contrast-to-Noise and Visibility
15.3.1 Contrast and Contrast-to-Noise Ratio
15.3.2 Object Visibility and the Rose Criterion

15.4 Contrast Mechanisms in MRI and Contrast Maximization
15.4.1 Three Important Types of Contrast
15.4.2 Spin Density Weighting
15.4.3 $T_1$-Weighting
15.4.4 $T_2$-Weighting
15.4.5 Summary of Contrast Results
15.4.6 A Special Case: $T_1$-Weighting and Tissue Nulling with Inversion Recovery

15.5 Contrast Enhancement with $T_1$-Shortening Agents
18.1.4 Nonideal Slice Profile Effects on the SSI Signal .......................... 466
18.2 Short-$T_R$, Coherent, Gradient Echo Imaging ................................. 467
  18.2.1 Steady-State Free Precession: The Equilibrium Signal .................. 472
  18.2.2 Approach to Coherent Steady-State ...................................... 477
  18.2.3 Utility of SSC Imaging .................................................. 480
18.3 SSFP Signal Formation Mechanisms .............................................. 482
  18.3.1 Magnetization Rotation Effects of an Arbitrary Flip Angle Pulse ...... 482
  18.3.2 Multi-Pulse Experiments and Echoes .................................... 485
18.4 Understanding Spoiling Mechanisms ............................................. 500
  18.4.1 General Principles of Spoiling .......................................... 500
  18.4.2 A Detailed Discussion of Spoiling ...................................... 501
  18.4.3 Practical Implementation of Spoiling .................................... 506
  18.4.4 RF Spoiled SSI Sequence Implementation ................................. 510

19 Segmented k-Space and Echo Planar Imaging .................................... 513
19.1 Reducing Scan Times ............................................................ 514
  19.1.1 Reducing $T_R$ .............................................................. 514
  19.1.2 Reducing the Number of Phase/Partition Encoding Steps ................ 514
  19.1.3 Fixing the Number of Acquisitions ..................................... 516
  19.1.4 Partial Fourier Data Acquisition ....................................... 516
19.2 Segmented k-Space: Phase Encoding Multiple k-Space Lines per RF Excita-
  tion for Gradient Echo Imaging .................................................. 516
  19.2.1 Conventional Multiple Echo Acquisition .................................. 517
  19.2.2 Phase Encoding Between Gradient Echoes ................................ 520
19.3 Echo Planar Imaging (EPI) ...................................................... 524
  19.3.1 An In-Depth Analysis of the EPI Imaging Parameters .................. 528
  19.3.2 Signal-to-Noise ............................................................ 530
19.4 Alternate Forms of Conventional EPI .......................................... 533
  19.4.1 Nonuniform Sampling ...................................................... 533
  19.4.2 Segmented EPI ............................................................. 534
  19.4.3 Angled k-Space EPI ........................................................ 537
  19.4.4 Segmented EPI with Oscillating Gradients ............................... 542
  19.4.5 Trapezoidal Versus Oscillating Waveforms ................................ 545
19.5 Artifacts and Phase Correction ................................................ 546
  19.5.1 Phase Errors and Their Correction ..................................... 546
  19.5.2 Chemical Shift and Geometric Distortion ................................ 547
  19.5.3 Geometric Distortion ...................................................... 549
  19.5.4 $T_2^*$-Filter Effects .................................................... 551
  19.5.5 Ghosting ................................................................. 552
19.6 Spiral Forms of EPI .............................................................. 552
  19.6.1 Square-Spiral EPI .......................................................... 552
  19.6.2 Spiral EPI ..................................................................... 556
19.7 An Overview of EPI Properties .................................................. 560
  19.7.1 Speed of EPI ................................................................. 560
  19.7.2 Contrast Mechanisms ...................................................... 562
20 Magnetic Field Inhomogeneity Effects and $T_2^*$ Dephasing

20.1 Image Distortion Due to Field Effects ........................................... 570
  20.1.1 Distortion Due to Background Gradients Parallel to the Read Direction 570
  20.1.2 Distortion Due to Gradient Perpendicular to the Read Direction .... 575
  20.1.3 Slice Select Distortion .......................................................... 578

20.2 Echo Shifting Due to Field Inhomogeneities in Gradient Echo Imaging 580
  20.2.1 Echo Shift in Terms of Number of Sampled Points ..................... 583
  20.2.2 Echo Shift Due to Background Phase/Partition Encoding Gradients  585
  20.2.3 Echo Shift Due to Background Gradients Parallel to the Slice Select Direction ......................................................... 586
  20.2.4 Echo Shift Due to Background Gradients Orthogonal to the Slice Select Direction ......................................................... 587

20.3 Methods for Minimizing Distortion and Echo Shifting Artifacts .......... 587
  20.3.1 Distortion Versus Dephasing .................................................... 587
  20.3.2 High Resolution and Phase Dispersion ..................................... 588
  20.3.3 2D Imaging .............................................................................. 591
  20.3.4 2D Imaging with Variable Rephasing Gradients ......................... 593
  20.3.5 3D Imaging .............................................................................. 594
  20.3.6 Phase Encoded 2D and 3D Imaging with Single-Point Sampling: A Limited Version of CSI ......................................................... 600
  20.3.7 Spectrally Resolved 2D and 3D Imaging .................................... 600
  20.3.8 Understanding the Recovered Signal with Spectral Collapsing ........ 601

20.4 Empirical $T_2^*$ ............................................................................ 601
  20.4.1 Arbitrariness of $T_2^*$ Modeling of Gradient Echo Signal Envelopes 602
  20.4.2 The Spin Echo Signal Envelope and the Magnetic Field Density of States 604
  20.4.3 Decaying Signal Envelopes and Integrated Signal Conservation .... 605
  20.4.4 Obtaining a Lorentzian Density of States: A Simple Argument .... 609
  20.4.5 Predicting the Effects of Arbitrary Field Inhomogeneities on the Image 609

20.5 Predicting $T_2^*$ for Random Susceptibility Producing Structures ...... 611
  20.6 Correcting Geometric Distortion ................................................. 614

21 Random Walks, Relaxation and Diffusion ........................................ 619
  21.1 Simple Model for Intrinsic $T_2$ .................................................... 620
  21.1.1 Gaussian Behavior for Random Spin Systems ............................. 620
  21.1.2 Brownian Motion and $T_2$ Signal Loss .................................... 621

  21.2 Simple Model for Diffusion ......................................................... 622

  21.3 Carr-Purcell Mechanism .............................................................. 624

  21.4 Meiboom-Gill Improvement .......................................................... 627

  21.5 The Bloch-Torrey Equation .......................................................... 627
    21.5.1 The Gradient Echo Case for a Bipolar Pulse .......................... 628
21.5.2 The Spin Echo Case .................................................. 629
21.5.3 Velocity Compensated Diffusion Weighted Sequences .......... 631
21.6 Some Practical Examples of Diffusion Imaging ...................... 631

22 Spin Density, \( T_1 \) and \( T_2 \) Quantification Methods in MR Imaging 637
22.1 Simplistic Estimates of \( \rho_0, T_1 \) and \( T_2 \) ......................... 639
   22.1.1 Spin Density Measurement .................................. 639
   22.1.2 \( T_1 \) Measurement ........................................ 639
   22.1.3 \( T_2 \) Measurement ....................................... 640
22.2 Estimating \( T_1 \) and \( T_2 \) from Signal Ratio Measurements .......... 640
   22.2.1 \( T_1 \) Estimation from a Signal Ratio Measurement ........... 641
   22.2.2 \( T_2 \) Estimation ........................................ 646
22.3 Estimating \( T_1 \) and \( T_2 \) from Multiple Signal Measurements ...... 648
   22.3.1 Parameter Estimation from Multiple Signal Measurements .... 648
   22.3.2 \( T_1 \) Estimation ........................................ 648
   22.3.3 \( T_2 \) and \( T_2^* \) Estimation ............................ 650
22.4 Other Methods for Spin Density and \( T_1 \) Estimation ................. 650
   22.4.1 The Look-Locker Method .................................. 650
   22.4.2 \( T_1 \) Estimation from SSI Measurements at Multiple Flip
      Angles .................................................................. 654
22.5 Practical Issues Related to \( T_1 \) and \( T_2 \) Measurements .......... 657
   22.5.1 Inaccuracies Due to Nonideal Slice Profile ................... 657
   22.5.2 Other Sources of Inaccuracies in Relaxation Time and Spin Density
      Measurements ...................................................... 661
   22.5.3 Advanced Sequence Design for Relaxation Time and Spin Density
      Measurements ...................................................... 663
   22.5.4 Choice of Number of Signal Measurement Points .............. 664
22.6 Calibration Materials for Relaxation Time Measurements .......... 665

23 Motion Artifacts and Flow Compensation 669
23.1 Effects on Spin Phase from Motion along the Read Direction .......... 670
   23.1.1 Spin Phase Due to Constant Velocity Flow or Motion in the Read
      Direction ......................................................... 670
   23.1.2 Effects of Constant Velocity Flow on the Image ............... 673
23.2 Velocity Compensation along the Read and Slice Select Directions .... 676
   23.2.1 Velocity Compensation Concepts ................................ 676
   23.2.2 Velocity Compensation along the Slice Select Direction ......... 682
23.3 Ghosting Due to Periodic Motion ....................................... 682
   23.3.1 Ghosting Due to Periodic Flow ................................ 682
   23.3.2 Sinusoidal Translational Motion ................................ 684
   23.3.3 Examples of Ghosting from Pulsatile Flow .................... 688
23.4 Velocity Compensation along Phase Encoding Directions .......... 690
   23.4.1 Effects of Constant Velocity Flow in the Phase Encoding Direction: 
      The Misregistration Artifact ..................................... 690
   23.4.2 Phase Variation View of the Shift Artifact .................... 690
### Contents

23.4.3 Velocity Compensating Phase Encoding Gradients ........................................ 694
23.5 Maximum Intensity Projection .............................................................................. 697

#### 24 MR Angiography and Flow Quantification ......................................................... 703
24.1 Inflow or Time-of-Flight (TOF) Effects ............................................................... 704
   24.1.1 Critical Speeds ......................................................................................... 704
   24.1.2 Approach to Equilibrium ....................................................................... 705
   24.1.3 2D Imaging ............................................................................................ 707
   24.1.4 3D Imaging ............................................................................................ 709
   24.1.5 Understanding Inflow Effects for Small Velocities ................................. 713
24.2 TOF Contrast, Contrast Agents and Spin Density/$T_2^*$-Weighting ................ 713
   24.2.1 Contrast Agents ..................................................................................... 714
   24.2.2 Suppressing Signal from Inflowing Blood Using an Inversion Pulse ....... 720
   24.2.3 Suppressing Signal from Inflowing Blood Using a Saturation Pulse ........ 721
24.3 Phase Contrast and Velocity Quantification ....................................................... 725
   24.3.1 Phase Subtraction and Complex Division for Measuring Velocity ......... 727
   24.3.2 Four-Point Velocity Vector Extraction ................................................... 731
24.4 Flow Quantification ............................................................................................. 734
   24.4.1 Cardiac Gating ....................................................................................... 735

#### 25 Magnetic Properties of Tissues: Theory and Measurement ......................... 741
25.1 Paramagnetism, Diamagnetism and Ferromagnetism ....................................... 742
   25.1.1 Paramagnetism ....................................................................................... 742
   25.1.2 Diamagnetism ........................................................................................ 743
   25.1.3 Ferromagnetism ...................................................................................... 744
25.2 Permeability and Susceptibility: The $\vec{H}$ Field .......................................... 746
   25.2.1 Permeability and the $\vec{H}$ Field .......................................................... 746
   25.2.2 Susceptibility .......................................................................................... 747
25.3 Objects in External Fields: The Lorentz Sphere ................................................. 749
   25.3.1 Spherical Body ....................................................................................... 749
   25.3.2 Infinite Cylindrical Body ....................................................................... 751
   25.3.3 Local Field Cancellation via Molecular Demagnetization .................... 753
   25.3.4 Sphere and Cylinder Examples Revisited: The Physical Internal Fields 755
25.4 Susceptibility Imaging ......................................................................................... 757
   25.4.1 Phase Measurements .............................................................................. 757
   25.4.2 Magnitude Measurements ..................................................................... 762
25.5 Brain Functional MRI and the BOLD Phenomenon .......................................... 765
   25.5.1 Estimation of Oxygenation Levels ......................................................... 765
   25.5.2 Deoxyhemoglobin Concentration and Flow ......................................... 766
   25.5.3 Functional MR Imaging (fMRI): An Example ....................................... 767
25.6 Signal Behavior in the Presence of Deoxygenated Blood .................................. 769
   25.6.1 The MR Properties of Blood ................................................................. 769
   25.6.2 Two-Compartment Partial Volume Effects on Signal Loss .................... 771
### Contents

27.4.5 Power Deposition ........................................... 858

A Electromagnetic Principles: A Brief Overview 863
   A.1 Maxwell’s Equations ..................................... 864
   A.2 Faraday’s Law of Induction .............................. 864
   A.3 Electromagnetic Forces .................................. 865
   A.4 Dipoles in an Electromagnetic Field .................... 866
   A.5 Formulae for Electromagnetic Energy .................. 866
   A.6 Static Magnetic Field Calculations ..................... 867

B Statistics 869
   B.1 Accuracy Versus Precision ............................... 869
      B.1.1 Mean and Standard Deviation ....................... 870
   B.2 The Gaussian Probability Distribution ................. 871
      B.2.1 Probability Distribution ............................. 871
      B.2.2 z-Score .............................................. 871
      B.2.3 Quoting Errors and Confidence Intervals .......... 872
   B.3 Type I and Type II Errors ............................... 872
   B.4 Sum over Several Random Variables .................... 874
      B.4.1 Multiple Noise Sources .............................. 875
   B.5 Rayleigh Distribution .................................. 876
   B.6 Experimental Validation of Noise Distributions ....... 878
      B.6.1 Histogram Analysis .................................. 878
      B.6.2 Mean and Standard Deviation ....................... 878

C Imaging Parameters to Accompany Figures 883

Index 893
