CONTENTS

ELASTIC FILAMENTS OF THE CELL

Connecting Filaments: A Historical Prospective ........................................ 1
Károly Trombitás

Connectin: From Regular to Giant Sizes of Sarcomeres ....................... 25
Koscak Maruyama and Sumiko Kimura

Molecular Tools for the Study of Titin’s Differential Expression ...... 35
Thomas Centner, Francoise Fougerousse, Alexandra Freiburg, Christian Witt, Jacque S. Beckmann, Henk Granzier, Károly Trombitás, Carol C. Gregorio, and Siegfried Labeit

Sequence and Mechanical Implications of Titin’s PEVK Region ...... 53
Marion L. Greaser, Seu-Mei Wang, Mustapha Berri, Paul Mozdziak, and Yashiyuki Kumazawa

Probing the Functional Roles of Titin Ligands in Cardiac Myofibril Assembly and Maintenance ................................................. 67
Abigail S. McElhinny, Siegfried Labeit, and Carol Gregorio

Assembly of Myofibrils in Cardiac Muscle Cells............................. 89
Joseph W. Sanger, Joseph C. Ayoob, Prokash Chowrashi, Daniel Zurawski, and Jean M. Sanger

General Discussion I ............................................................................. 107

MOLECULAR MECHANISM OF ELASTICITY

Mechanical Manipulation of Single Titin Molecules with Laser Tweezers ................................................................. 111
Miklós S.Z. Kellermayer, Steven Smith, Carlos Bustamante, and Henk L. Granzier
Unfolding Forces of Titin and Fibronectin Domains Directly Measured by AFM ............................................. 129  
Matthias Rief, Mathias Gautel, and Hermann E. Gaub

Computer Modeling of Force-Induced Titin Domain Unfolding ...... 143  
Hui Lu, André Krammer, Barry Isralewitz, Viola Vogel, and Klaus Schulten

Extensibility in the Titin Molecule and Its Relation to Muscle Elasticity ................................................................. 163  
Larissa Tskhovrebova and John Trinick

Titin Elasticity in the Context of the Sarcomere: Force and Extensibility Measurements on Single Myofibrils ............ 179  
Wolfgang A. Linke

TITIN-LIKE PROTEINS

Links in the Chain: The Contribution of Kettin to the Elasticity of Insect Muscles ..................................................... 207  
Belinda Bullard, David Goulding, Charles Ferguson, and Kevin Leonard

Titin as a Chromosomal Protein .............................................. 221  
Cristina Machado and Deborah J. Andrew

Role of the Elastic Protein Projectin in Stretch Activation and Work Output of Drosophila Flight Muscles ................................. 237  
Jim O. Vigoreaux, Jeffrey R. Moore, and David W. Maughan

Drosophila Projectin: A Look at Protein Structure and Sarcomeric Assembly .............................................................. 251  
Agnes Ayme-Southgate, Richard Southgate, and Michelle Kulp McEliece

Role of Titin in Nonmuscle and Smooth Muscle Cells ..................... 265  
Thomas C.S. Keller, III, Kenneth Eilertsen, Mark Higginbotham, Steven Kazmierski, Kyoung-Tae Kim, and Michaella Velichkova
FUNCTIONAL ROLE OF ELASTIC FILAMENTS

Mechanical Properties of Titin Isoforms ........................................ 283
Henk Granzier, Michiel Helmes, Olivier Cazorla,
Mark McNabb, Dietmar Labeit, Yiming Wu, Rob Yamasaki,
Alka Redkar, Miklós Kellermayer, Siegfried Labeit,
and Károly Trombitás

Intact Connecting Filaments Change Length in 2.3-nm Quanta....... 305
Felix Blyakhman, Anna Tourovskaya, and Gerald H. Pollack

Titin-Thin Filament Interaction and Potential Role in
Muscle Function .................................................................................. 319
Jian-Ping Jin

Is Titin the Length Sensor in Cardiac Muscle?
Physiological and Physiopathological Perspectives ...................... 337
Jean-Yves Le Guennec, Olivier Cazorla, Alain Lacampagne,
and Guy Vassort

Ca²⁺-Dependence of Passive Properties of Cardiac Sarcomeres ...... 353
Bruno D. Stuyvers, Masahito Miura, and Henk E.D.J. ter Keurs

Possible Contribution of Titin Filaments to the Compliant Series
Elastic Component in Horseshoe Crab Skeletal Muscle Fibers........ 371
Haruo Sugi, Tsuyoshi Akimoto, Takakazu Kobayashi,
Suechika Suzuki, and Mitsuyo Shimada

Skeletal Muscle-Specific Calpain, p94, and Connectin/Titin:
Their Physiological Functions and Relationship to Limb-Girdle
Muscular Dystrophy Type 2A .............................................................. 383
Hiroyuki Sorimachi, Yasuko Ono, and Koichi Suzuki

General Discussion II ......................................................................... 399

From Connecting Filaments to Co-Expression of Titin Isoforms ..... 405
Károly Trombitás, Alexandra Freiburg, Marion Greaser,
Siegfried Labeit, and Henk Granzier

INDEX ................................................................................................. 419
