List of Contributors .................................................................................................................. v
Preface ....................................................................................................................................... ix

Section I. Strategies for spinal cord injury repair

1. Strategies for spinal cord injury repair
   D.M. McTigue, P.G. Popovich, L.B. Jakeman and B.T. Stokes
   (Columbus, OH, USA) ........................................................................................................ 3

2. Cell death and plasticity after experimental spinal cord injury
   M.S. Beattie, Q. Li and J.C. Bresnahan (Columbus, OH, USA) ........................................ 9

3. The multi-domain structure of extracellular matrix molecules: implications for
   nervous system regeneration
   S. Meiners, M.L.T. Mercado and H.M. Geller (Piscataway, NJ, USA) ............................. 23

4. Spinal cord injury-induced inflammation: a dual-edged sword
   J.R. Bethea (Miami, FL, USA) ........................................................................................ 33

5. Immunological regulation of neuronal degeneration and regeneration in the
   injured spinal cord
   P.G. Popovich (Columbus, OH, USA) ............................................................................. 43

Section II. Plasticity of the injured spinal cord: retraining neural circuits to
   promote motor recovery

6. Plasticity of neuronal networks in the spinal cord: modifications in response to
   altered sensory input
   K.G. Pearson (Edmonton, AB, Canada) ............................................................................. 61

7. Neural plasticity as revealed by the natural progression of movement expression
   — both voluntary and involuntary — in humans after spinal cord injury
   B. Calancie, M. Del Rosario Molano and J.G. Broton (Miami, FL, USA) .......................... 71

8. Laufband (LB) therapy in spinal cord lesioned persons
   A. Wernig, A. Nanassy and S. Müller (Bonn and Karlsbad-Langensteinbach, Germany) 89
9. Spinal and supraspinal plasticity after incomplete spinal cord injury: correlations between functional magnetic resonance imaging and engaged locomotor networks  
B.H. Dobkin (Los Angeles, CA, USA) ..................................... 99

Section III. Impact of neuroprosthetic applications on functional recovery

10. Impact of neuroprosthetic applications on functional recovery  
J.K. Chapin (Brooklyn, NY, USA) ........................................ 115

11. Nerve cuffs for nerve repair and regeneration  
J.A. Hoffer and K. Kallesøe (Burnaby, BC, Canada) ................. 121

12. Cortical motor areas and their properties: implications for neuroprosthetics  
P.D. Cheney, J. Hill-Karrer, A. Belhaj-Saïf, B.J. McKiernan, M.C. Park and J.K. Marcario (Kansas City, KS, USA) ............... 135

13. Network level properties of short-term plasticity in the somatosensory system  
D.J. Krupa and M.A.L. Nicolelis (Durham, NC, USA) ............... 161

14. The reorganization of somatosensory and motor cortex after peripheral nerve or spinal cord injury in primates  
J.H. Kaas (Nashville, TN, USA) ........................................... 173

Section IV. Neurotrophins and activity-dependent plasticity

15. Neurotrophins and activity-dependent plasticity  
H. Thoenen (Martinsried, Germany) ..................................... 183

16. Differences in the regulation of neuropeptide Y, somatostatin and parvalbumin levels in hippocampal interneurons by neuronal activity and BDNF  
S. Marty (Créteil, France) ................................................. 193

17. Long-term regulation of excitatory and inhibitory synaptic transmission in hippocampal cultures by brain-derived neurotrophic factor  
M.M. Bolton, D.C. Lo and N.T. Sherwood (Durham, NC, USA) .... 203

18. Neurotrophins and activity-dependent inhibitory synaptogenesis  
F.J. Seil and R. Drake-Baumann (Portland, OR, USA) ............. 219

19. Modulation of hippocampal synaptic transmission and plasticity by neurotrophins  
B. Lu and W. Gottschalk (Bethesda, MD, USA) ....................... 231

20. Neurotrophin-evoked rapid excitation of central neurons  
K.W. Kafitz, C.R. Rose and A. Konnerth (Munich, Germany) ...... 243
Section V. Candidate cells for transplantation into the injured CNS

21. Candidate cells for transplantation into the injured CNS
   I. Fischer (Philadelphia, PA, USA) ........................................... 253

22. Autoimmune involvement in CNS trauma is beneficial if well controlled
   M. Schwartz (Rehovot, Israel) .................................................. 259

23. Olfactory ensheathing glia transplantation into the injured spinal cord
   A. Ramón-Cueto (Valencia, Spain) .............................................. 265

24. Precursor cells for transplantation
   M.S. Rao and M. Mayer-Proschel (Salt Lake City, UT, USA) ........... 273

25. Potential use of marrow stromal cells as therapeutic vectors for diseases of the central nervous system
   D.J. Prockop, S.A. Azizi, D.G. Phinney, G.C. Kopen and E.J. Schwarz (New Orleans, LA and Philadelphia, PA, USA) ..................... 293

26. Neurobiology of human neurons (NT2N) grafted into mouse spinal cord: implications for improving therapy of spinal cord injury
   V.M.-Y. Lee, R.S. Hartley and J.Q. Trojanowski (Philadelphia, PA and Sunnyvale, CA, USA) ............................................... 299

27. Grafting of genetically modified fibroblasts into the injured spinal cord
   Y. Liu, M. Murray, A. Tessler and I. Fischer (Philadelphia, PA, USA) 309

Section VI. New directions in regeneration research

28. Delivery of therapeutic molecules into the CNS
   M.E. Emborg and J.H. Kordower (Chicago, IL, USA) ...................... 323

29. Neurotrophin small-molecule mimetics
   Y. Xie and F.M. Longo (San Francisco, CA, USA) .......................... 333

30. Tissue engineering strategies for nervous system repair
   P.A. Tresco (Salt Lake City, UT, USA) ........................................ 349

31. In vivo neuroprotection of injured CNS neurons by a single injection of a DNA plasmid encoding the Bcl-2 gene
   R.A. Saavedra, M. Murray, S. De Lacalle and A. Tessler (Philadelphia, PA and Los Angeles, CA, USA) ....................................... 365

Subject Index ............................................................................. 373
