New Trends in Fluorescence Spectroscopy

Applications to Chemical and Life Sciences

With 187 Figures and 39 Tables

Springer
Fluorescence spectroscopy, fluorescence imaging and fluorescent probes are indispensable tools in numerous fields of modern medicine and science, including molecular biology, biophysics, biochemistry, clinical diagnosis and analytical and environmental chemistry. Applications stretch from spectroscopy and sensor technology to microscopy and imaging, to single molecule detection, to the development of novel fluorescent probes, and to proteomics and genomics. The Springer Series on Fluorescence aims at publishing state-of-the-art articles that can serve as invaluable tools for both practitioners and researchers being active in this highly interdisciplinary field. The carefully edited collection of papers in each volume will give continuous inspiration for new research and will point to exciting new trends.

## Contents

### Part 1 Historical Aspects of Fluorescence

1 Introduction: On the Origin of the Terms Fluorescence, Phosphorescence, and Luminescence .......................... 3  
B. VALEUR  
References .................................................. 6  

2 Pioneering Contributions of Jean and Francis Perrin to Molecular Luminescence .......................... 7  
M.N. BERBERAN-SANTOS  
2.1 Introduction ........................................ 7  
2.2 Biographical Sketches of Jean Perrin and Francis Perrin ........................................ 9  
2.3 The Perrin-Jablonski Diagram ...................... 18  
2.3.1 Jablonski Diagram ................................ 19  
2.3.2 États Métastables – Phosphorescence ........... 20  
2.4 Resonance Energy Transfer .......................... 22  
2.5 Fluorescence Polarization ......................... 25  
2.6 Concluding Remarks ................................ 28  
2.7 Bibliographical Notes ................................ 30  
References .................................................. 30  

3 The Seminal Contributions of Gregorio Weber to Modern Fluorescence Spectroscopy ....................... 35  
D.M. JAMESON  
3.1 Overview ............................................. 35  
3.2 Early Years .......................................... 36  
3.3 Cambridge ........................................... 36  
3.4 Francis Perrin's Influence .......................... 37  
3.5 Ph.D. Thesis .......................................... 38  
3.6 Postdoctoral ......................................... 40  
3.7 Sheffield ............................................. 42  
3.8 Intrinsic Protein Fluorescence ..................... 42  
3.9 Red-Edge Effects .................................... 44  
3.10 EEM .................................................. 44  
3.11 Brandeis ............................................ 45
Part 2 Fluorescence of Molecular and Supramolecular Systems

4 Investigation of Femtosecond Chemical Reactivity by Means of Fluorescence Up-Conversion

J.-C. Miaoloq, T. Gustavsson

4.1 Nanosecond and Picosecond Time-Resolved Fluorescence Techniques
   4.1.1 Phase Modulation Spectroscopy
   4.1.2 Time Correlated Single Photon Counting
   4.1.3 Streak Cameras for Time-Domain Measurements

4.2 Femtosecond Emission Spectroscopy by Time-Gated Up-Conversion
   4.2.1 Historical Background of the Time-Gated Up-Conversion Technique
   4.2.2 Principle of the Time-Gated Up-Conversion Technique
      4.2.2.1 Phase Matching Conditions
      4.2.2.2 Quantum Efficiency for Up-Conversion
      4.2.2.3 Group Velocity Effects
   4.2.3 Experimental Setup

4.3 Time-Resolved Spectroscopy
   4.3.1 Solvation Processes
      4.3.1.1 Time-Dependent Fluorescence Stokes Shift (TDFSS). Non-Specific Solvation
      4.3.1.2 Specific Solvation: Role of the Structure and the Charge of the Probe
      4.3.1.3 Specific Solvation: Hydrogen Bond Dynamics
      4.3.1.4 Isotope Effect
      4.3.1.5 Spectral Narrowing in the 10 ps Time Scale
   4.3.2 Photoinduced Intramolecular Charge Transfer
   4.3.3 Intermolecular Electron Transfer
### 4.3.4 Intramolecular Proton Transfer

### 4.3.5 S₂→S₁ Internal Conversion

### 4.3.6 Biological Systems

### 4.4 Conclusions
