Symposium on Complexity in biological information processing, held at the Kaiserin-Friedrich-Haus, Berlin, Germany, 4-6 July 2000

Editors: Gregory Bock (Organizer) and Jamie Goode

This symposium was based on a proposal made by Georg Brabant and Klaus Prank, and was supported by a grant from the Deutsche Forschungsgemeinschaft

Terence Sejnowski  Introduction  1

Upinder S. Bhalla and Ravi Iyengar  Functional modules in biological signalling networks  4
Discussion  13

Matthias G. von Herrath  Design of immune-based interventions in autoimmunity and viral infections—the need for predictive models that integrate time, dose and classes of immune responses  16
Discussion  24

Lee A. Segel  Controlling the immune system: diffuse feedback via a diffuse informational network  31
Discussion  40

General discussion I  45

Michael J. Berridge  The versatility and complexity of calcium signalling  52
Discussion  64

Thomas Gudermann  Multiple pathways of ERK activation by G protein-coupled receptors  68
Discussion  80

Manuela Zaccolo, Luisa Filippin, Paulo Magalhães and Tullio Pozzan  Heterogeneity of second messenger levels in living cells  85
Discussion  93

v
Klaus Prank, Martin Kropp and Georg Brabant  Humoral coding and decoding  96
Discussion  107

Denis Noble  From genes to whole organs: connecting biochemistry to physiology  111
Discussion  123

Discussion  146

General discussion II  Understanding complex systems: top–down, bottom–up or middle–out?  150

R. Douglas Fields, Feleke Eshete, Serena Dudek, Nesrin Ozsarac and Beth Stevens  Regulation of gene expression by action potentials: dependence on complexity in cellular information processing  160
Discussion  172

Simon B. Laughlin  Efficiency and complexity in neural coding  177
Discussion  187

Ad Aertsen, Markus Diesmann, Marc-Oliver Gewaltig, Sonja Grün and Stefan Rotter  Neural dynamics in cortical networks — precision of joint-spike events  193
Discussion  204

Rajesh P. N. Rao and Terrence J. Sejnowski  Predictive learning of temporal sequences in recurrent neocortical circuits  208
Discussion  229

Final discussion  234
