Contents

List of Contributors ................................................................. v

Preface ........................................................................................ xi

Acknowledgements ................................................................. xiii

Section I. Seizure-induced damage in experimental epilepsy

1. Concept of activity-induced cell death in epilepsy: historical and contemporary perspectives
   B.S. Meldrum (London, UK) ...................................................... 3

2. Are seizures harmful: what can we learn from animal models?
   A.J. Cole, S. Koh and Y. Zheng (Boston, MA, USA) ............... 13

3. Doubt and certainty in counting
   R.W. Guillery and B.K. August (Madison, WI, USA) .............. 25

4. Design-based stereological methods for counting neurons
   M.J. West (Arhus, Denmark) ................................................... 43

5. The course of cellular alterations associated with the development of spontaneous seizures after status epilepticus
   F.E. Dudek, J.L. Hellier, P.A. Williams, D.J. Ferraro and K.J. Staley
   (Fort Collins and Denver, CO, USA) ...................................... 53

6. Progression of neuronal damage after status epilepticus and during spontaneous seizures in a rat model of temporal lobe epilepsy
   A. Pitkänen, J. Nissinen, J. Nairismägi, K. Lukasiuk, O.H.J. Gröhn,
   R. Miettinen and R. Kauppinen (Kuopio, Finland) .................. 67

7. Does convulsive status epilepticus (SE) result in cerebral damage or affect the course of epilepsy — the epidemiological and clinical evidence?
   S. Shorvon (London, UK) ....................................................... 85

8. Repeated brief seizures induce progressive hippocampal neuron loss and memory deficits
   R. Kotloski, M. Lynch, S. Lauersdorf and T. Sutula (Madison, WI, USA) ......................................................... 95
9. Neuronal apoptosis after brief and prolonged seizures
   J. Bengzon, P. Mohapel, C. Ekdahl and O. Lindvall (Lund, Sweden) 111

10. Seizure-induced neurogenesis: are more new neurons good for an adult brain?
    J.M. Parent and D.H. Lowenstein (Ann Arbor, MI and Boston, MA, USA) 121

11. Summary: Seizure-induced damage in experimental models
    T. Sutula and A. Pitkänen (Madison, WI, USA and Kuopio, Finland) 133

### Section II. Mechanisms of seizure-induced damage

12. Complications associated with genetic background effects in models of experimental epilepsy
    P.E. Schauwecker (Los Angeles, CA, USA) 139

13. Genomics and neurological phenotypes: applications for seizure-induced damage
    J.A. Del Rio and C. Barlow (La Jolla, CA, USA) 149

14. Functional genomics in experimental and human temporal lobe epilepsy: powerful new tools to identify molecular disease mechanisms of hippocampal damage
    A.J. Becker, O.D. Wiestler and I. Blümcke (Bonn, Germany) 161

15. What synaptic lipid signaling tells us about seizure-induced damage and epileptogenesis
    N.G. Bazan, B. Tu and E.B. Rodriguez de Turco (New Orleans, LA, USA) 175

16. The role of mitochondria and oxidative stress in neuronal damage after brief and prolonged seizures
    H.R. Cock (London, UK) 187

17. Cell death and metabolic activity during epileptiform discharges and status epilepticus in the hippocampus
    U. Heinemann, K. Buchheim, S. Gabriel, O. Kann, R. Kovacs and S. Schuchmann (Berlin, Germany) 197

18. Summary: Mechanisms of seizure-induced damage
    T. Sutula and A. Pitkänen (Madison, WI, USA and Kuopio, Finland) 211

### Section III. Evidence for seizure-induced damage in human studies: epidemiology, pathology, imaging and clinical studies

19. Do seizures beget seizures?
    W.A. Hauser and J.R. Lee (New York, NY and San Francisco, CA, USA) 215
20. Do occasional brief seizures cause detectable clinical consequences?
   S. Shinnar and W.A. Hauser (Bronx and New York, NY, USA) ........... 221

21. Hippocampal neuron damage in human epilepsy: Meyer's hypothesis revisited
   G.W. Mathern, P.D. Adelson, L.D. Cahan and J.P. Leite (Los Angeles, CA, Pittsburgh, PA, USA and Ribeirão Preto, Brazil) ........... 237

22. MRI studies. Do seizures damage the brain?
   J.S. Duncan (London and Chalfont St. Peter, UK) ....................... 253

23. Do prolonged febrile seizures produce medial temporal sclerosis? Hypotheses, MRI evidence and unanswered questions
   D.V. Lewis, D. Barboriak, J.R. MacFall, J.M. Provenzale, T.V. Mitchell and K.E. VanLandingham (Durham, NC, USA) ............. 263

24. Do recurrent seizures cause neuronal damage? A series of studies with MRI volumetry in adults with partial epilepsy
   R. Kälviäinen and T. Salmenperä (Kuopio, Finland) .................... 279

25. Proton magnetic resonance spectroscopic imaging suggests progressive neuronal damage in human temporal lobe epilepsy
   A. Bernasconi, E. Tasch, F. Cendes, L.M. Li and D.L. Arnold (Montreal, PQ, Canada) .................................................. 297

26. Neuroimaging and the progression of epilepsy
   W.H. Theodore and W.D. Gaillard (Bethesda, MD, USA) .............. 305

27. Summary: Evidence for seizure-induced damage in human studies: epidemiology, pathology, imaging, and clinical studies
   T. Sutula and A. Pitkänen (Madison, WI, USA and Kuopio, Finland) 315

Section IV. Seizure-induced cell death in development and functional consequences

28. Seizure-induced damage in the developing human: relevance of experimental models
   G.L. Holmes, R. Khazipov and Y. Ben-Ari (Boston, MA, USA and Marseille, France) ..................................................... 321

29. Seizure-induced neuronal death in the immature brain

30. Effects of brief seizures during development
   L. Velíšek and S.L. Moshé (Bronx, NY, USA) ......................... 355
31. Is neuronal death required for seizure-induced epileptogenesis in the immature brain?
   T.Z. Baram, M. Eghbal-Ahmadi and R.A. Bender (Irvine, CA, USA) 365

32. Assessing the behavioral and cognitive effects of seizures on the developing brain
   C.E. Stafstrom (Madison, WI, USA) ........................................ 377

33. Recent experimental studies of the effects of seizures on brain development
   J.W. Swann (Houston, TX, USA) ............................................ 391

34. Summary: Seizure-induced damage in development and functional consequences
   T. Sutula and A. Pitkänen (Madison, WI, USA and Kuopio, Finland) 395

Section V. Neuropsychological consequences of human epilepsy

35. Progressive cognitive decline in adolescents and adults with epilepsy
   C.B. Dodrill (Seattle, WA, USA) ........................................ 399

36. Progressive cognitive decline in epilepsy: an indication of ongoing plasticity
   H. Stefan and E. Pauli (Erlangen, Germany) .......................... 409

37. Progressive behavioral changes in children with epilepsy
   J.K. Austin and D.W. Dunn (Indianapolis, IN, USA) ............... 419

38. The neurodevelopmental impact of childhood onset temporal lobe epilepsy on brain structure and function and the risk of progressive cognitive effects
   B.P. Hermann, M. Seidenberg and B. Bell (Madison, WI and North Chicago, IL, USA) ........................................ 429

39. Effects of chronic epilepsy on declarative memory systems
   C. Helmstaedter (Bonn, Germany) .................................. 439

40. Effects of chronic epilepsy on intellectual functions
   H. Jokeit and A. Ebner (Zürich, Switzerland and Bielefeld, Germany) 455

41. Summary: neuropsychological consequences of human epilepsy
   T. Sutula and A. Pitkänen (Madison, WI, USA and Kuopio, Finland) 465

Section VI. Implications for management

42. Will brain damage after status epilepticus be history in 2010?
   D.M. Treiman (Phoenix, AZ, USA) ....................................... 471

43. Is complete seizure control imperative?
   F. Andermann (Montreal, Canada) ................................. 479
44. Implications for neuroprotective treatments
   B.S. Meldrum (London, UK) ........................................ 487

45. Development of neuroprotective compounds in the pharmaceutical industry:
   Where are we, and where are we going?
   N. Santilli (San Francisco, CA, USA) ............................. 497

46. So what can we conclude — do seizures damage the brain?
   J. Engel Jr. (Los Angeles, CA, USA) .............................. 509

47. Summary: Implications for management
   T. Sutula and A. Pitkänen (Madison, WI, USA and Kuopio, Finland) 513

Subject Index ............................................................... 515
