RSCPublishing
The cover illustration shows the structure of the outer membrane porin MspA from the soil bacterium *Mycobacterium smegmatis*. Mycobacteria, which have an unusual outer membrane, are considered a third group equidistant from the Gram-positive and Gram-negative bacteria. The MspA protein consists of eight subunits, forming a goblet-like structure around a single central channel. The upper part of the goblet consists of eight rim domains. The lower part contains two consecutive β-barrels with $8 \times 2 = 16$ strands forming the stem and the base regions of the goblet. For details about crystallization and structure, see the chapter by G.E. Schulz.
Contents

Section 1 Expression and Purification of Membrane Proteins

Chapter 1 Refolding of G-Protein-Coupled Receptors 3
Jean-Louis Banères
1 Introduction 3
2 Refolding of Membrane Proteins 4
3 In Vitro Protein Refolding 6
4 GPCR In Vitro Refolding 6
  4.1 Resolubilization from Inclusion Bodies 6
  4.2 Refolding 7
  4.3 Refolding of GPCR Fragments 8
  4.4 Refolding of Intact GPCRs 9
5 Conclusion 12
References 13

Chapter 2 Expression of Genes Encoding Eukaryotic Membrane Proteins in Mammalian Cells 15
Philip J. Reeves
1 Introduction 15
2 Mammalian Cell Hosts and Gene Expression Vectors 16
3 Delivery and Maintenance of Expression Vectors in Mammalian Cells 16
  3.1 Transient Transfection 17
  3.2 Stable Transfection 17
    3.2.1 A Procedure for Stable Transfection of HEK293S Cells 18
  3.3 Stable Episomal Replication 19
  3.4 Viral Infection 19
4 HEK293S Stable Cell Lines for High-Level Expression of Eukaryotic Membrane Proteins 20
  4.1 Constitutive Expression 20
  4.2 Tetracycline-Regulated Gene Expression 21
Chapter 3 Expression of Recombinant G-Protein Coupled Receptors for Structural Biology

Filippo Mancia and Wayne A. Hendrickson

1 Introduction
   1.1 Signal Transduction through G-protein Coupled Receptors
   1.2 Structural and Functional Characteristics of GPCRs
   1.3 Structure Determination of GPCRs

2 Expression of Recombinant GPCRs
   2.1 Overview
   2.2 Bacteria as Hosts for the Production of Functional GPCRs
   2.3 Production of GPCRs in Stably Transfected Mammalian Cells
   2.4 Production of GPCRs via Transient Transfection or Viral Infection of Mammalian Cells
   2.5 Production of GPCRs in Yeast
   2.6 Production of GPCRs in Insect Cells
   2.7 "In Vivo" Expression in the Eye
   2.8 Extra-Membranous Expression Systems
Chapter 4  The Purification of G-Protein Coupled Receptors for Crystallization

Tony Warne and Gebhard F.X. Schertler

1 Introduction
   1.1 Structural Studies of G-Protein Coupled Receptors
   1.2 The Turkey Erythrocyte Beta-Adrenergic Receptor

2 Heterogeneity of Overexpressed Receptors
   2.1 Heterogeneity of GPCRs due to Post-Translational Modifications
      2.1.1 N-Glycosylation
      2.1.2 Palmitoylation
      2.1.3 Phosphorylation
   2.2 Other Sources of Heterogeneity

3 Membrane Fractionation, Solubilization, and Detergent Selection
   3.1 Detergents for Solubilization
   3.2 Detergents for Final Purification Steps and Crystallization

4 Purification
   4.1 Use of Purification Tags and Fusions
   4.2 Removal of Tags and Fusions
   4.3 Ligand Affinity Chromatography
   4.4 Final Purification Steps before Crystallization and Assembly of Complexes
   4.5 Lipid Content during Purification

5 Final Quality Control, Monitoring Protein Stability, Aggregational State, Lipid, and Bound Detergent

6 Conclusions

Chapter 5  An Introduction to Detergents and Their Use in Membrane Protein Studies

Fabien Walas, Hiroyoshi Matsumura and Ben Luisi

1 Introduction
2 Physical Properties of Detergents Used in Membrane Protein Studies

2.1 Properties and Classification of Detergents

2.1.1 Properties of Detergents

2.1.2 Ionic Detergents

2.1.3 Non-Ionic Detergents

2.1.4 Zwitterionic Detergents

2.1.5 Amphipols

2.2 Lipopeptide Detergents

2.3 Supplements and Additives for Detergents

3 Extraction and Purification Procedure Using Common Detergents

3.1 Choice of Detergent

3.2 Purification of Membrane Proteins in the Presence of Detergents

3.2.1 Strategy and Method

3.2.2 Detergent Exchange or Removal

4 Use of Detergents in Membrane Protein Crystallization

4.1 Introduction

4.2 Membrane Protein Crystallization in Lipid Cubic Phase

4.3 Crystal Lattice Organization

4.4 Example of Detergent Interactions with β-Sheet Membrane Proteins

4.4.1 Crystal Structure of VceC, an Outer Membrane Protein from Vibrio Cholerae

4.4.2 Detergent Organization in Crystals of Monomeric Outer Membrane Phospholipase A

4.5 Example of Detergent and α-Helical Type Membrane Protein Contact

4.5.1 Crystal Structure of Rotor Rings

4.5.2 Structure of Bovine Rhodopsin in a Trigonal Crystal Form

4.6 A Synopsis of Detergent–Protein Interactions in Crystals

5 Conclusion

Chapter 7  Membrane Proteins Studied by Solid-State NMR

Adam Lange and Marc Baldus

1 Introduction
2 Sample Preparation and Methodology
   2.1 Isotope Labelling and Solid-State NMR Sample Preparation
   2.2 Resonance Assignments and Structure Determination
3 Applications
   3.1 Membrane Protein Structure
   3.2 Ligand Binding to Membrane Proteins
   3.3 Membrane Protein Dynamics
4 Conclusions

Chapter 8  Assessing Structure and Dynamics of Native Membrane Proteins

W. Kukulski, T. Kaufmann, T. Braun, H. Rémigy, D. Fotiadis and A. Engel

Abstract
1 Introduction
2 Assembly of 2D Crystals
3 Electron Microscopy
   3.1 Image Formation
   3.2 Electron Diffraction
   3.3 Specimen Preparation
   3.4 Data Processing
4 Atomic Force Microscopy
   4.1 Image Formation
   4.2 Sample Preparation
   4.3 Optimized Imaging Conditions
   4.4 Imaging Native Membranes
   4.5 Nanodissection
   4.6 Image Processing
5 Conclusion and Perspectives

2.3.2 The Donor Site of the Electron Transfer Chain of Photosystem II
Chapter 19 Glutamate Receptor Ion Channels: Structural Insights into Molecular Mechanisms

Avinash Gill and Dean R. Madden

1 Introduction

1.1 Physiological and Pathophysiological Roles of the Ionotropic Glutamate Receptors

1.2 Medicinal Chemistry

1.3 Ionotropic Glutamate Receptor Subunits Are Modular

2 Studies of the Ligand-Binding Domain

2.1 Overall Structure

2.2 Pharmacological Specificity

2.3 Ligand-Binding Domain Conformational Changes

2.4 Correlation with Channel Activation

2.5 Dimerization
2.6 Desensitization and the Stability of the Dimer Interface 356

3 The Functional Architecture of a Glutamate Receptor Ion Channel 358
3.1 Structure of a Complete Ionotropic Glutamate Receptor 358
3.2 The Role of the N-Terminal Domain in Subunit Assembly 360
3.3 The Organization of the Transmembrane Domains 361

4 A Working Model of AMPA Receptor Function 362
4.1 LBD Mutations Affecting Binding and Gating 363
4.2 Subunit Gating Behavior 363

5 Open Questions 364
5.1 Different Models of Partial Agonism 364
5.2 Multistate Kinetic Models 366
5.3 Structural Prospects 366
5.4 Auxiliary Proteins 367
