NATURAL CAUSES

ESSAYS IN ECOLOGICAL MARXISM

JAMES O’CONNOR

THE GUILFORD PRESS
NEW YORK LONDON
Abstraction of labor and nature, 20, 87, 326
Agriculture, 2–3
  bad harvests, 159–160, 171–173n
  capitalist, 123, 159–160
  degradation of soil resources, 192–193
  in early industrial capitalism, 9–10, 114
  historical evolution of labor in, 26
  Preservation First! principles, 320
Anarchism, 284–285, 292–293n, 294n, 309
Año Nuevo, 25–26
Anthropocentrism, 2–3
Asian capital, 311–313
Berry, Wendell, 320
Bioregionalism, 285, 287–288, 293n
  Monterey Bay, 74–75, 77
  sustainability concept, 235
Bookchin, Murray, 283–284, 285
Bush, George, 136, 214, 221, 223, 241
Canadian forest crisis, 127, 139
Capital accumulation
  crisis theory, 130, 185, 252n
  ecological crisis and, 180–182
  external natural barriers to, 159–160,
  165, 174–175n
  function of state, 212–213
  global development patterns, 197–198
  history of Chicago, 112–113, 119n
  as impairing conditions of capital, 165–
  166
  qualitative consequences, 316–317
  sources, 178
Capital goods, 179–180
Capitalist economies, 8. See also Second con-
  tradition of capitalism; Sustainable
capitalism
  abstract/concrete labor in, 327–328
  Asian, 311–313
  basis for red green politics in, 272–273
  biological resource use, 122–123, 124
  capital goods/consumer goods, 179
  commodification of nature in, 23–24
  compatibility of environmentalists with,
  269–270
  contradictions in production condi-
  tions, 150–152, 160–162
  control of labor in, 203
  as crisis-dependent, 163–164, 182, 252n
  as crisis-ridden systems, 162–163, 164–
  167, 182
  current functioning, 1–2
  as demand-constrained, 261–262
  development of ecological theory, 126–
  127
  developmental historiography, 49–51,
  61, 63–65
  dualistic views of nature in, 22, 23
  ecological effects of, 123–124
  economic histories, 56–57
  effects on local knowledge, 88–89
  environmental harms in, vs. socialist
  countries, 258–259, 263–264
  environmental history, 59–60
  first contradiction of, 3, 127, 176–177,
  240–241
  history of Los Angeles, 117–119
  history of Monterey Bay, 83–87
Capitalist economies (continued)
individual in, 22
myth of modern growth, 316–317
nature in, 3, 10, 59–60, 144
operations of state in, 154–155
political histories, 56
as political subject, 77–78
postindustrial conditions of production, 12–13
preservation function, 317–318
primacy of oil industry, 214–217
self-expansion, 180–181
social and cultural history, 57–59
sources of cost crises, 242
state regulation of production conditions, 148–149, 164–165
structural evolution, 50
technology in, 201–203
use value/exchange value in, 327–328

Capitalist society, 30
Chicago. See Nature’s Metropolis: Chicago and the Great West
China, 29
City of Quartz
accomplishments of, 117
as economic history, 117–119
as environmental history, 117–118
theoretical content, 117

Civil society
in determining production conditions, 152–155
in liberal democratic state, 212–213
structural determinants, 153

Class politics/struggle
in Chicago history, 114–115
current environment, 299
current significance, 1–2
historical context, 34–35
integration of ecological and cultural politics in, 77–78, 87–89
issues in production conditions, 14–15
post-Marxist thought, 12–13, 14
relations within classes and, 41–42, 43
Clinton administration, 282, 286, 314, 315

Colonialism, 65n
Combined development
definition, 188
pollution and, 196–197
pressures for, 190
resource depletion and, 197
theoretical significance, 187

Commodification
of labor, 84, 144, 155–156n
of land, 23, 58, 84, 144
of nature, 107–108
Commoner, Barry, 207, 283–284, 285
Competitive accumulation, 58

Consciousness
nature and, 4–5
socially mediated, 5, 276
Conservationism, 124–125

Consumer goods, 179–180
technological innovation in, 202–203, 205–206
Consumer income/spending, 206–207

Cost crises
managing, 246–247
sources of, 242–246
Costs, ecological, 128–129, 130n

Crisis theory, 2, 3. See also Ecological crisis
capital accumulation in, 130, 185
as capital underproduction, 129, 166
classical Marxist, 125, 159–160, 161, 162–164, 328
cost crises, 242–247
conceptualizations of crisis, 135–137
current manifestations, 281–282
ecological Marxism, 160–162, 164–167
ecological vs. traditional Marxism, 334–335
economic, 178, 182–183
economic development of Chicago in, 112–113
first contradiction of capitalism, 3, 127, 176–177
global capitalism, 282–283
of historical materialism, 31
significance of, 186
social planning response, 168, 175–176n
transition to socialism, 167–171
Critical theory, 58
Cronon, William. See *Nature's Metropolis: Chicago and the Great West*
Cuba, 29, 33–34, 45
Culture
  - capitalization of, in Monterey Bay, 83–87
  - as determinant of nature, 71–72, 75–77
  - labor as linkage with nature, 83–84
  - Los Angeles history, 117–118
  - as product of nature, 71–75
  - as productive force, 83–84
  - traditional Marxist thought, 40–41
  - work relations and, 36–38, 40–43, 45–47
Czechoslovakia, 29
Davis, Mike. See *City of Quartz*
Deep ecology, 285, 293n, 308
  - Romantic philosophy in, 21–22
Deforestation, 193–194
Departments of capitalist reproduction, 179–180, 182
Depression, global, 247–248
Distribution of wealth, 116, 268–269, 273
Diversity, 286
Douglas, Mary, 136
Ecological crisis
  - as cause of economic crisis, 183
  - consequences of general depression, 247–248
  - as crisis of capital accumulation, 166–167, 180–182
  - current global, 281, 300
  - economic source of, 183
  - identifying material interests in, 138–140
  - ideological dimensions, 137–139
  - North–South division, 190
  - political discourse, 142
  - prospects for red green politics in, 267
  - subjectivist basis, 135–136, 137
  - uncertainty in, 140–141, 142
  - world fisheries, 139–140
Ecological feminism, 285, 288, 292
Ecological Marxism
  - concept of capital underproduction, 166–167
  - conditions of production in, 12–13, 307
  - crisis theory, 160–162, 164–167
  - criticisms of, 3–4
  - necessary conditions for, 161–162
  - post-Marxist thought and, 12–14
  - prospects, 15
  - rationale, 2–3, 7
  - role of, 7
  - significance for new social movements, 158–159
  - theory development, 126–127, 174n
  - transition to socialism, 161–162, 167–171
Ecological science, 68–69n
  - in ex-socialist countries, 259–260
Ecological socialism. See also Ecological Marxism
  - current indications for, 272–275
  - definition, 278n
  - democratic form, 277, 279n
  - distinguishing features, 332–333, 334–337
  - historical obstacles, 275–276
  - internal dualism, 268, 284
  - organizing needs for, 250–251
  - social setting for, 256, 267–268
  - theoretical basis/goals, 290–292, 331–333
Ecology, definition and scope, 25, 270, 274–275
Education, 89
Endangered species, 135, 137
Energy economy. See also Fossil fuels
  - capital's motivation for efficiency, 181
  - Marxist thought, 122
  - thermodynamic model, 131n
  - transparency of capitalist state, 213
Enlightenment
  - sense of nature in, 20, 21–22, 24
  - view of technology, 200
Environmental determinism, 47n
  - Monterey Bay history conceived as, 73–74
Environmental history, 4
  - built environment in, 67n
  - in capitalist historiography, 51, 59–60, 65
  - in development of histories, 56
  - ecological science and, 68–69n
  - of Falls Creek watershed, 94
  - goals, 25, 51–52, 66–67n
  - leading historians, 65
  - of Los Angeles, 117–119
  - Marxism and, 52
  - methodological challenges, 55
Environmental history (continued)

- Nature in, 70n
- Premature applications, 64
- Prospects for, 65–66
- Significance of, 52–53, 54
- Site specificity, 54–55
- Subject matter, 53–54, 62, 94

Environmental justice, 285, 286
Environmental racism, 285, 286

Exchange value. See also Surplus value
- In capitalist economy, 324, 327–328
- Definition, 325–326
- Ecological costs in, 130n
- Of labor, 144–145
- Of natural conditions, 147
- In nature, 122
- In second contradiction of capitalism, 127–128

Fall Creek watershed, 6–7
- Ecological impact of industry, 105–107
- Economic history, 94–95
- Labor history, 96–104
- Nature–culture dichotomy in, 96
- Purpose of narrative, 94
- Restoration effort, 104–105
- Significance, 95–96, 107–108

Family, 149

Feminist thought, 285, 288, 292, 308, 319

Feudalism, 26–27, 44

First contradiction of capitalism, 3, 127, 176–177, 240
- Global regulation, 240–241

Fisheries, 139–140, 153

Fossil fuels, 122, 130
- Antecedents to Gulf War, 217–219
- Estimated oil reserves, 225n
- Global consumption, 215, 224–225n
- History of oil resource exploitation, 216–217
- North Sea reserves, 227. See also Shetland Islands
- Primacy of oil industry, 214–216
- Uneven development, 194

Free riders, 13–14

Genetic science, 211n, 238, 251n

Global capitalism, 1–2
- Asian capital in, 311–313
- Combined development, 188
- Ecological–cultural politics and, 77–78
- Ecological issues, 274
- Growth, 314
- Institutions and structures, 241–242, 302–303
- New forms of reproduction of production conditions, 169
- Patterns of ecological damage, 197–198, 300
- Political functioning in, 299
- Potential for crisis, 282–283
- Prospects for red green movement, 300–302, 303–304
- Regulating first contradiction, 240–241
- Strategies for red green movement, 302–303
- Structure of labor in, 128
- Uneven development, 187–190
- U.S. role, 281–282
- Work relations in, 46

Gordon, Burton, 25

Great man histories, 64, 69n

Green politics, 11, 197. See also Red green politics

Group of seven countries, 240–242, 282–283

Gulf War
- Economic theory of, 213–219
- Historical antecedents, 217–219, 220–221
- Iraqi rationale, 217
- Political theory of, 213, 214, 219–223

Haiti, 33, 34

Hirsch, J., 145, 157n

Historical materialism
- Centrality of labor in, 26
- Classical account, 4–6
- Concept of cooperation in, 39–40
- Concept of leadership in, 31–32
- Function of ideas, 31–34
- Limitations of Marx's model, 43–44, 275–277, 289–290
- Object of study, 31
- Productive forces and relations in, 35–36
- Progress of history in, 34
- Recent conceptualizations, 27–28, 30–31
- Revision for ecological thought, 5–7, 290
- Socioeconomic context, 34–35
- Theory of culture in, 36–38, 43–44
- Theory of nature in, 37–38
History
antecedents of Gulf War, 217–219, 220–221
Cold-War era ecological harms, 257–265
cumulative processes, 62
evolution of capitalism, 49–50, 56–60,
61, 62
narrative form, 48
oil resource exploitation, 216–218
postmodernist view of, 48–49
specialization in writing of, 63
uneven development, 63, 188–189
Human ecology, 25, 53
Idealism, 32–34
Identity politics, 295–296
Images, 19–20
Import substitute industrialization, 189
Indigenous peoples, 79, 284
Individualism, 13–14, 288–289
historical conceptualizations, 22
Indonesia, 27
Industrialization
economic history of Chicago, 113–114
historical development, 8–10
subordination of merchant capital in,
113–114
uneven global development, 188–190
Information management, 260
Infrastructure, 145–146, 307, 318
Instrumentalist view, 21, 24
International Monetary Fund, 2, 241, 302–303, 310
Justice, 285, 286, 338–339
Labor, 169–170. See also Production condi-
tions; Production relations; Productive
relations
abstract/concrete, 326, 327–328
capitalist evolution, 23–24
commodification of, 58, 84, 144, 155–
156n
cooperation in, 38–40
in Cronon’s Nature’s Metropolis: Chicago
and the Great West, 115–116
as cultural practice, 36–37, 45–47
ecological socialist model, 331–333
effects of combined development, 196–197
as fictitious commodity, 144–145, 307
historical forms of, 26–27
historical materialist conception, 26
history of Fall Creek watershed, 96–104
history of nature and, 26, 52
methods for capital control of, 203
place in environmental movement, 271
as political subject, 79
preservation, 318–319
Preservation First! model, 322
prospects for new social movements, 14–15
reconstruction of community, 329
in resolving culture–nature dichotomy,
83–87
in socialist countries, 260–261
society–nature interface, 5
in stagnated global economy, 314–316
technology and, 203, 204–205
traditional socialist goals, 268
Land
anarchist thought, 284
commodification, 23, 58, 84, 144
Language, 6
ecology of, 37–38
genetically determined, 47n
images and, 19–20
productive forces and relations, 37–38
reality and, 48–49
and reification of ideas, 32–33
Lebowitz, M., 173n
Legal relations, 258
Liberal democratic states
reform movements, 309–310
two-state model, 212–213
Local knowledge, 88–89
Localism, 270–271, 273–274, 296
“think globally/act locally” approach,
300–302
Los Angeles. See City of Quartz
Market formation, 112
Marxist thought
crude labor and use value formula-
tions, 329–330
conservationist ethic, 124–125
crisis theory, 159–160, 161, 162–164, 328
cultural subjects, 40–41, 69–70n
current relevance, 1–2, 28, 281
departments of capitalist reproduction,
179–180
Marxist thought (continued)
ecological content, 2–4, 121, 124, 125–126
ecological effects of capitalism, 123–124
energy economics in, 122
environmental history and, 52
forms of production conditions, 125–126, 144–147, 160, 243, 252n, 306–307
functions of state, 149
historical context, 289–290
idealism in, 32–34
limitations, 43–44, 159, 276–277, 289–290, 327
natural barriers to capitalism, 159–160
nature in, 2–3, 4–6, 37, 38, 121–122
production relations in, 35–38
recent developments, 29–30
social conflict in, 58
structure of civil society, 153
transition to socialism, 328–329
within-class relations, 41–42
Mind–body dualism, 22
Monterey Bay. See also Fall Creek watershed
bioregionalism, 74–75, 77
capitalization of nature and culture, 83–87
class politics, 77–78
cultural history, 72–73, 75–77
divisions between nature and culture, 79–83
economic geography, 73
environmental threats, 74
flatlands politics, 295–298
greenbelt, 80–81
labor as informing historical principle, 83–84
marine resources, 81–83
multiculturalism, 77
naturalistic view of, 71–75
obstacles to political change, 88–89
physical landscape, 71, 72, 73
political divisions, 79–83
Moore, T.G., 140–141
Multiculturalism, 285–286
Naturalization, 258, 336
Natural economy, 44–45, 293–294n
organization of, 181
Natural history
history of labor and, 26, 52
human history interface, 25–26
in revision of historical materialism, 5–7
Natural resources
as capital, 179
in capital self-expansion, 181–182
in capitalist production, 122–124
capital's motivation for efficient use, 181, 238
combined development, 197
as conditions of production, 146–147
consumer behavior linkages, 206–207
in demand-constrained vs. resource-constrained economies, 261–262, 263–264
extraction technologies, 202
global distribution and exploitation, 8, 189–190
modification of environment in use of, 24–25
political modeling, 11–12
uneven development, 192–196
use in ex-socialist countries, 256, 261, 262, 263–264
Nature
capitalist conceptualizations, 22–24
in capitalist economy, 3, 10
capitalization of, 59–60, 83–87, 185, 238
classical Marxist thought, 2–3, 4–6, 37, 38, 121–122
commodification of, 107–108
culture as product of, 71–75
depictions of, 19–20
effects of material life, 4–5
environment and, 24
in environmental history, 52, 70n
as fictitious commodity, 125–126, 144, 307
historical conceptualizations, 20–22
historical materialist conceptualization, 37–38
human separation from, 22, 23
labor as linkage with culture, 83–84
as product of culture, 71–72, 75–77
as production condition, 307
as productive force, 83
restoration of Fall Creek, 104–105
work relations and, 37–38, 43–45, 43–47
INDEX 347

Nature's Metropolis: Chicago and the Great West, 65
class politics in, 114–115
criticism of, 109
environmental content, 110
goals of, 110–112
market formation in, 112
Marxist thought and, 109–110, 112, 115–116
regional development in, 110
subordination of merchant capital by industrial capital, 113–114
theoretical basis, 109, 110
transportation issues in, 110–111

Needs, 326–327
New Left, on class relations, 41–42
New social movements. See Social movements
New world order, 213, 214, 219–220
North American Free Trade Agreement, 2, 303, 304, 305n
North–South division, 8
ecological degradation, 190
focus of radical movements, 255–256, 293n
meaning of political ecology, 255–256
political functioning, 11–12
prospects for international red green movement, 301, 302–304
prospects for sustainable capitalism, 248–249
uneven development, 189, 192–193

Nuclear technology, 205

Obsolescence, 207
Original accumulation, 23
Ozone depletion, 141

Page, B., 112–113, 114
Passive materialism, 47n, 277

Planning
basis for ecological socialism, 274–275
crisis-induced, 168, 175–176n
ecological science in ex-socialist countries, 259–260, 264–265
global ecological issues, 274
localism, 273–274
socialist, 259
for sustainable capitalism, 246–247
Polanyi, Karl, 125, 144, 147, 159, 307, 308

Political ecology, 67n
North–South commonalities/differences, 255–256, 293n
Political functioning
absence of class issues, 77–78
challenges for new social movements, 223–224
conflicts of Monterey Bay region, 79–83
contradictions within production conditions, 151–152
current left green political movements, 271–272
in defining ecological crisis, 137–139, 142
ecological degradation in capitalist vs. socialist systems, 257–258
energy economics, 122
in ex-socialist countries, 259–260, 264–265
form of ecological socialism, 277
future orientation, 88
in global capitalism, 11–12, 15, 299
goals, 12
green trends, 236–237, 300–301
history of capitalism, 56, 61
idealism in, 34–35
individual and universal demands, 13–14
influence of oil industries, 214–215
leadership, 31–32
legitimation of state and policy, 212–213
in liberal democratic state, 212–213
localism, 270–271
models of work relations, 42
naturalistic vs. cultural, 77, 79–80
in origins of Gulf War, 213, 214, 219–223
political compatibility of environmentalists, 269–270
post-Marxist conceptualization, 13
prospects for sustainable capitalism, 249–251
state regulation of production conditions, 149–151

Pollution
combined development and, 196–197
costs, 128–129
Department I industries, 182
ever industrial period, 8–10
economic conditions as determinants of, 209–210n
by ex-socialist countries, 256–257, 260, 261, 262, 263–265
Pollution (continued)
