Wave Propagation and Remote Sensing

Propagation des Ondes et Télédétection

Proceedings of URSI Commission F Symposium
Louvain, Belgium, 9-15 June 1983

Co-sponsors: the European Space Agency (ESA)
& the Commission of the European Communities (CEC)
Contents

Welcoming address xi
Allocation de bienvenue xiii

INVITED REVIEW PAPERS

Wave propagation and remote sensing
D T Gjessing xvii

Wave propagation in precipitation
P Deligne xxxi

Wave scattering by random surfaces and application to natural surfaces
E Lüneberg xLiii

Session 1 MULTIPATH EFFECTS

Analysis of multipath fading observations on certain microwave paths in British Columbia
N Owen et al 3

The PACEM experiment on line of sight multipath propagation
M Sylvain et al 13

Microwave multipath from sea reflections - the Bay of Fundy
A R Webster & W I Lam 25

Rates of change of propagation medium transfer functions during selective fadings
L Martin 31

Distortions in FM car radios caused by multipath reception and their reduction by means of antenna diversity
K H Lindenmeier et al 37
Session 2  CLEAR AIR REFRACTIVITY

Effect of 'anomalous' tropospheric M-profiles over the sea on SHF field strengths
V A Kabanov et al

Measurements of radio refractive index profiles at tropical and equatorial regions and their influence on line-of-sight microwave links
N R Dhein

Propagation anomalies in a 4.7 and 11 GHz line of sight path
G Roux & J P Mon

Statistics of radio refractivity and atmospheric attenuation in tropical climates
L B Kolawole

Session 3  CLEAR AIR TURBULENCE

A comparison of radio-wave and in-situ observations of tropospheric turbulence and wind velocity
M H A J Herben & W Kohsiek

Upper tropospheric structures observed with VHF radar at Arecibo
A T Waterman & P Czechowsky

Amplitude scintillation in propagation paths above 10 GHz
P Basili et al

An offsetting technique to study scintillations in direction of arrival in earth-space paths
E Vilar et al

Session 4A  ATTENUATION OF MICROWAVES

Results obtained from attenuation measurements of the Deutsche Bundespost OTS-propagation experiment
F Dintelmann

First global results of the European Space Agency OTS propagation campaign
A Laloux et al
CONTENTS

Attenuation by rain on earth-space paths at 13 GHz
R V Webber et al 127

Correlation between various radioelectrical data
at 11.4, 11.6 and 35 GHz
D Vanhoenacker et al 135

Session 4BMICROWAVE PROPERTIES OF DUST

X-band measurements of the dielectric constant
of dust
S M Sharief & S I Ghobrial 143

Measurements of the complex refractive index
of soils and airborne particles
S J Al-Bader & M M Dawoud 149

Effects of dust/sandstorms on some aspects
of microwave propagation
S Haddad et al 153

Session 5RAIN CHARACTERISTICS

Experimental study of propagation characteristics
in millimeter wave region
Y Furuhama et al 165

Measurements and analysis of raindrop size
distribution in South Western Nigeria
G O Ajayi & R L Olsen 173

Etude théorique et expérimentale de l'affaiblissement
de propagation par les précipitations equatoriales
et tropicales
F Moupfouma & J Tiffon 185

Rain profile effects on radiowave attenuation
above 10 GHz
Z W Zhang et al 193

Statistics on the fine scale structure of rain in
Stockholm 1977-79
L Falk 197

100 GHz open-resonator measurements of precipitation
and fog propagation parameters
D J Harris & S Pickard 201
Session 6A  ATTENUATION PREDICTION METHODS

Uncertainties in estimating worst month statistics for earth-space links influenced by rain
   P Misse & P Waldteufel  209

An analytical and numerical comparison between two rain attenuation prediction methods for earth-satellite paths
   E Costa  213

Prediction of rain attenuation based on point rain rate statistics for Alexandria, Egypt
   H N Khirallah  219

Evaluation of an effective medium temperature from radiometric-satellite beacons comparisons
   P Sobieski et al  225

Session 6B  ATMOSPHERIC CROSS-POLARISATION

Cross-polarisation on terrestrial microwave links during clear weather
   I A Glover et al  235

Influence of raindrop oscillations on coherent forward scattering of microwaves in rain
   M Chandra et al  239

Correlation of 6- and 4-GHz rain-induced depolarization at low elevation angle
   N Matsunaka et al  247

Session 7  RADIOMETRY

Effects of the atmosphere on image resolution in microwave radiometry
   G D'Auria & D Solimini  259

Mesospheric water vapour measured with an airborne sensor
   G K Hartmann et al  269

Influence of surface type on the brightness temperature of snow-covered terrain
   M T Hallikainen et al  273

Radiometric sensing of the atmospheric boundary layer
   P Ciotti et al  281
Session 8  SURFACE SCATTERING

Numerical comparisons of space-harmonic and full-wave scattering models  
D M Delauder & C A Balanis 291

The development and testing of a stochastic variational principle for electromagnetic scattering  
J A Krill & R A Farrell 299

A new perturbation expansion for electromagnetic scattering by stochastic surfaces  
H P Baltes & A M J Huiser 309

Generalised approach to radio wave scatter from time-varying rough surfaces  
D P Chrissoulidis & E E Kriezis 315

Measurements of long-term radar sea clutter statistics  
I A Mandour et al 323

Session 9  INVERSION METHODS

ART and SIRT correction factors in geotomography  
C A Balanis et al 335

Stability improvements in geotomographic inversion methods  
R D Radoliff et al 341

Comparison of two methods for estimating the water vapour correction to altimeter readings from radiometric measurements  
A Guissard 347

Session 10A  VOLUME SCATTERING

Scattering and absorption by atmospheric aerosol models  
P W Barber & P E Geller 357

Backscattering and differential backscattering characteristics of the melting layer  
A W Dissanayake et al 363

Radiative transfer in size-limited bodies  
G Brussaard 371
Session 10B  REMOTE SENSING APPLICATIONS

On the use of communication concepts and techniques for remote sensing
J Hjelmstad 381

Propagation characteristics at 35 and 78 GHz for spaceborne altimeters
D Tarducci 391

Electromagnetic methods in geophysical probing
V Hansen 399

Reponse d'un gisement à une excitation electromagnetique sinusoidale ou impulsionnelle - approximation de la plaque mince
P Degauque et al 405

Session 11  RADAR MEASUREMENTS AND APPLICATIONS

Capability of surface-based clear-air doppler radar for monitoring meteorological properties in elevated layers
E E Gossard et al 413

The dependency on the propagation environment of the frequency-scaling of attenuation
R McGuinness et al 425

Radar modelling of space diversity associated with slant path rain attenuation at variable path angles, frequencies and drop size distributions
J Goldhirsh 437

Site diversity in earth to satellite links: radar measurements and theoretical predictions
C Capsoni et al 447

Attenuation of radio waves by atmospheric wet ice and mixed phase hydrometeors
Y M M Antar & A Hendry 455

Assessment of the intrinsic rain profile parameters from radar and rain gauge data
C Capsoni et al 463

Symmetric four antenna array resolves multiple reflectors with complex spectrum analysis of multiplexed closely spaced frequency soundings
K Bibl 469
