CONTENTS

Preface ................................................................. .................................

I - PRIMARY CELLS

Introduction ................................................................. .................................

Manganese Dioxide-Lithium Cells
H. Ikeda and N. Furukawa ................................................................. 8

Lithium Manganese Dioxide Cells Featuring the Use of Aluminium with a Polymer Bonded Seal
A. Gilmour ................................................................. 16

Discharge Characteristics of Graphite Fluoride Prepared Via Graphite oxide
T. Nakajima, A. Mabuchi, R. Hagiwara and N. Watanabe ............ 23

The Lithium/Cobalt Polysulfide 2/3A High Rate Cell
W.L. Bowden, L.H. Barnette and D.L. DeMuth ................................. 30

Rationalization of the Electrochemical Behavior of Transition Metal Oxide Positive Electrode Materials at Room Temperature
S. Crouch-Baker, C.K. Huang and R.A. Huggins ................................. 44

The Stepwise Reduction of Silver Vanadium Oxide in Lithium/Silver Vanadium Oxide Cells
E.S. Takeuchi and W.C. Thiebolt III ................................................................. 58

Evaluation of Li/CuO and Li/Cu₂O(PO₄)₂ D-Cells
Calvin D. Jaeger ................................................................. 68

A Novel Method for Applying Polymeric Coating to the Anode of the Lithium/Iodine-Polyvinylpyridine Battery
Frank W. Rudolph and Curtis F. Holmes ................................................................. 77

The Effect of P2VP Molecular Weight and Aging Temperature on Self-Discharge and the Subsequent High Rate Performance of Lithium-Iodine Batteries
C.C. Streinz, R.G. Kelly, and P.J. Moran ................................................................. 87
The Influence of Poly (2-Vinylpyridine) Molecular Weight on the Volume Change Characteristics of Li/I₂ Batteries with Pelletized Cathodes

The Technology Issues and The Prospects for the Use of Lithium Batteries in Space
G. Halpert and S. Subbarao. 129

Reliability of Li/SO₂ Cells for Long-Life Applications
Samuel C. Levy. 146

Active Cosolvents for Sulfur Dioxide Liquid Cathode Electrolytes
Russell Moyl and George E. Blomgren. 152

Lithium Sulfur Dioxide Battery Safety Studies
H.Venkatasetty, W.B. Ebner, D.L. Chua, J.A. Barnes and R.F. Bis. 159

An Innovative Rupture Disk Vent for Lithium Batteries
Baylis C. Navel. 169

Optimization of Reserve Lithium Thionyl Chloride Battery Electrochemical Design Parameters
Narayan Doddapaneni. 175

Low Temperature Safety of Lithium-Thionyl Chloride Cells

Impedance Spectroscopy for Lithium Passivation In Li/SOCl₂ Cells
P. Chenebault and D. Vallin. 201

Impedance of Passive Lithium Anodes in SOCl₂ Solutions under Low-Field Polarization
Frank M. Delnick. 212

Passivation of Lithium in SOCl₂, SO₂Cl₂ and SO₃
Mogens Mogensen. 229

Electrochemical Study of Halides and Oxyhalides in LiAlCl₄ Electrolyte
Part 1 : Electrochemical Studies of SO₂Cl₂
E. Lojou, R. Messina, J. Perichon, J.P. Descroix, G. Sarre. 244

Electrochemical Study of Halides and Oxyhalides in LiAlCl₄, 3 SO₂ Electrolyte
Part 2 : Comparison between SO₂Cl₂, SOCl₂ and Cl₂
E. Lojou, R. Messina, J. Perichon, J.P. Descroix, G. Sarre. 259
Properties of Advanced C-Size Calcium-Thionyl Chloride Batteries
E. Elster, R. Cohen, M. Brand, Y. Lavi and E. Peled........... 271

A comparison of Lithium Liquid Cathode and Ca/SOCl₂ Cells for Communication Use
R.J. Staniewicz, S.J. Hafner and R.A. Dixon.................... 279

Investigation of Catalyzed Li/SOCl₂ Cells

Spectroscopic Study of the LiAlCl₄-SOCl₂ Electrolyte Hydrolysis Reaction Using Isotopically Enriched Compounds
J.C. Bailey and G.E. Blomgren.................................. 301

II - SECONDARY CELLS

Recent Work in Organic Electrolyte Secondary Lithium Batteries
J.P. Gabano......................................................... 311

Ambient Temperature Lithium Batteries for Electric Utility and Vehicle Applications
B.B. Owens, D.L. Douglas........................................ 335

Inorganic Electrolyte Li/SO₂ Rechargeable System: Development of a Prototype Hermetic C Cell and Evaluation of the Performance and Safety Characteristics
A.N. Dey, H.C. Kuo, P. Keister, and M. Kallianidis........... 343

Cell Performance and Electrochemical Studies of Inorganic Electrolytes in Rechargeable Lithium Sulfur Dioxide Systems

Performance of Rechargeable Lithium Titanium Disulphide Cells
C.D. Desjardins and T.G. Cadger................................. 382

Performance of AA Li-TiS₂ Cells
M. Anderman and J.T. Lundquist.................................. 392

Lithium Secondary Batteries Using Thin Films of Titanium Sulfide as the Cathode
T. Uchida, Y. Fuji, M. Wakihara, and M. Taniguchi............ 401

Capacity Decline of Ambient Temperature Secondary Lithium Battery
Modelling of Irreversible Reactions in Li/MoS\textsubscript{2} Secondary Cells
J.A.R. Stiles and D.T. Fouchard................................. 422

Discharge and Charge Mechanisms of TiO\textsubscript{2} and MoS\textsubscript{2} as a Cathode
Material of Lithium Battery
Z.I. Takehara, K. Kanamura, K. Yuasa, and N. Imanishi........ 434

Nuclear Beam Analysis of Lithium in a-MoS\textsubscript{3}Li\textsubscript{x}
R.N. Bhattacharya, D. Yan, P.M.S. Lesser, F.H. Pollak and
D.M. Schleich.................................................... 443

Importance of Heat Transfer in Li/MoS\textsubscript{2} Batteries for Aerospace
Applications
C.J. Johnson.......................................................... 458

MoS\textsubscript{3} Thin Film Cathodes Prepared by Chemical Vapor Deposition
D.M. Schleich, H.S. Chang and Y.L. Barberio.................... 464

Rechargeable Lithium Battery Employing Porous Thin Film of
Cu\textsubscript{y}Mo\textsubscript{6}S\textsubscript{8}z (2<\textit{y}<4, 7.8<\textit{z}<8.0)
M. Wakihara and T. Uchida......................................... 477

Electrochemical Characteristics and Structural Changes of Several
Molyblic Acids as Cathode Materials for Lithium Batteries
M. Kumagai, N. Kumagai and K. Tanno.......................... 484

Oxide Based Intercalation Compounds for Organic Electrolyte
Rechargeable Lithium Cells
J. Labat, V. Dechenaux, Y. Jumel and J.P. Gabano.............. 494

Electrochemical Behavior of Vanadium (V) Oxide in Propylene
Carbonate-LiClO\textsubscript{4}
M. Sugawara, Y. Kitada, N. Date and K. Matsuki............... 503

The Cathode Reactions of V\textsubscript{6}O\textsubscript{13} (NS) in Rechargeable Lithium
Battery
X.K. Feng, D.Q. Wang, and D.J. Liu.............................. 511

Lithium Insertion Characteristics of Vanadium Pentoxide and
Related Oxides
Y. Kuranushi, T. Miura, and T. Kishi............................ 520

Development of Li-Linear-Graphite Hybrid-Amorphous V\textsubscript{2}O\textsubscript{5} Coin
Type Secondary Battery
K. Inada, D. Ikeda, Y. Sato...................................... 530

Vanadium-Molybdenum Oxides and their P\textsubscript{2}O\textsubscript{5} Glasses as Intercalation
Cathodes for Rechargeable Lithium Cells
M. Uchiyama, S. Slane, E. Plichta, and M. Salomon............. 540
Manganese Oxide for Lithium Secondary Battery  
N. Furukawa, T. Saito, K. Teraji, I. Nakane and T. Nohma

Studies on Niobium Triselenide Cathode Material for Lithium Rechargeable Cells  
B.V. Ratnakumar, C.L. Ni, S. Distefano, R.B. Somoano and C.P. Bankston

Carbon Microfibers with Conically Orientated Carbon Layers as Cathode Materials of Rechargeable Lithium Cells  
M. Dohzono, H. Katsuki, M. Egashira

A rechargeable Cell Based on a Conductive Polymer/Metal Alloy Composite Electrode  
T.R. Jow and L.W. Shacklette

Effects of the Electrolyte Solution on the Behavior of Lithium Electrode  
Y. Matsuda and M. Morita

Addition Effects of Some Organic Compounds on the Cycling Behavior of Li Electrode  
Y. Matsuda, H. Hayashida, and M. Morita

Suppression of Dendrite Formation During Cycling of Lithium Electrodes in Organic Electrolytes  
J.O. Besenhard, J. Gürtler, P. Komenda and M. Josowicz

Lithium Cycling Efficiency in Mixed Solvents Electrolytes  
S. Tobishima, M. Arakawa and J. Yamaki

Thermodynamics of Ternary Systems and its Application to Li-Si-Based Negative Electrode Materials  
A.A. Anani and R.A. Huggins

Secondary Lithium Batteries Using Fusible Alloy Negative Electrodes  
Y. Toyoguchi, J. Yamaura, T. Matsuı and T. Iijima

Alternative Anodes for Secondary Lithium Batteries  
K.M. Abraham, D.M. Pasquarello, E.B. Willstaedt and G.F. McAndrews

Electrochemical Stability of LiMF₆ (M=P, As, Sb) in Various Aprotic Organic Solvents  
C. Nanjundiah, J.L. Goldman, L.A. Dominey and V.R. Koch

Optimization of Electrolyte Purification Procedures  
O. Laverdure, C.D. Desjardins, G.K. MacLean and T.G. Cadger
