CONTENTS

	Page		Page
Abstract .....	1	Analysis, Association, and Effects of Organic	
Workshop summary .....	1	Constituents of Aquatic Sediment—Continued	
Introduction .....	1	Proposed operational programs—Continued	
Structure and goals of the workshop .....	2	Correlation of sediment organic contaminant anal-	
Synopsis of discussions .....	3	yses with bioassay analyses .....	28
Sources, sinks, transport, and storage .....	3	Proposed research programs in sediment organic	
Analytical methods .....	4	chemistry .....	29
Chemical analyses .....	4	Development of a comprehensive testing regime and	
Mineralogical analyses .....	4	chemical model for organic contaminant associa-	
Physical properties .....	5	tion with sediment .....	29
Sampling methodology .....	5	Improved methodology for isolation and analysis of	
Technology transfer .....	6	organic contaminants from sediment .....	29
Training .....	6	Inorganic solubility controls on natural and manmade	
Advisory groups and workshops .....	6	organic solutes in water .....	29
Concluding remarks .....	6	Organic chemistry changes associated with the	
References .....	6	aerobic/anaerobic boundary in bed sediment .....	30
A Review of Physical and Chemical Partitioning of In-		Early diagenesis of organic matter in aquatic	
organic Constituents in Sediments, by Arthur		sediments .....	30
J. Horowitz		Conclusions .....	30
Introduction .....	7	References .....	31
Physical partitioning of sediments .....	7	Bioavailability of Sediment-Bound Metals, by Samuel N.	
Surface area and grain size .....	7	Luoma	
Mineralogy and composition .....	8	Introduction .....	32
Size fractionation techniques for chemical analysis .....	9	Characteristics of the biological uptake of metals .....	33
Utility of size fractionation for chemical analysis .....	11	Mechanisms of uptake .....	34
Chemical partitioning of sediments .....	11	Transport from food .....	37
Partial chemical extractions .....	13	The role of sediments .....	40
Chemical analysis of separated phases .....	15	Recommendations .....	50
Statistical treatment of data and mathematical		Conclusions .....	50
modeling .....	16	References .....	51
Summary .....	18	Concepts and Methods for Characterizing the Physical	
References .....	19	Properties of Sediments, by Tung-Ming Lai	
Analysis, Association, and Effects of Organic Con-		Introduction .....	56
stituents of Aquatic Sediment, by Jerry A. Leenheer		Composition of sediments .....	57
Introduction .....	22	Particle size .....	57
Association of organic constituents with sediments .....	22	Surface area .....	59
Natural organic constituents .....	22	Surface charge .....	60
Organic contaminants .....	24	Recommendations .....	61
Analysis of organic constituents in sediments .....	25	References .....	62
Natural organic constituents .....	25	Simulation of Transport-Related Properties, by James P.	
Organic contaminants .....	26	Bennett	
Aquatic effects of organic constituents in sediments .....	26	Introduction .....	64
Natural organic constituents .....	26	Suspended-load transport .....	64
Organic contaminants .....	27	Bed-load transport .....	66
Proposed operational programs in sediment organic		Dispersive characteristics of sediment transport .....	67
chemistry .....	28	Deposition and erosion .....	69
Field separation of dissolved and sediment phases of		Bed elevation and composition accounting—Scour, fill,	
samples for organic contaminant analysis .....	28	and armoring .....	70
Tailoring sediment sampling and subsampling tech-		Simulation of sediment transport, scour, and fill .....	72
niques for organic contaminant analysis .....	28	Sediment transport model case studies .....	73
Long-term site-specific studies .....	28	References .....	75

## ILLUSTRATIONS

---

		Page
FIGURE 1.	Diagrammatic representation of the important inorganic and organic sinks on the surface of a clay mineral particle -----	23
2.	Diagram of proposed analytical scheme for organic contaminant analysis of sediment -----	30
3.	Simplified schematic characterization of the environmental interface of an organism, illustrating mechanisms of transport of metals into biological tissues -----	35
4.	Simplified schematic illustration of the various processes that affect the availability of trace contaminants to organisms -----	37
5.	Diagram showing partitioning of Ag, Cd, Co, Cu, Pb, and Zn among binding components important in oxidized sediments, as indicated by statistical associations -----	43
6, 7.	Graphs showing:	
	6. Differences in uptake of $^{110m}\text{Ag}$ when different types of well-defined sediments were ingested by the deposit-feeding clam <i>Macoma balthica</i> -----	45
	7. Correlation of Pb in deposit-feeding bivalve <i>Scrobicularia plana</i> with Pb or Pb/Fe ratio in surficial estuarine sediments -----	46
8.	Diagram of water-sediment-biota system -----	56
9.	Graph showing settling velocity as a function of particle diameter for quartz spheres -----	65
10.	Definition sketch of vertical transport processes -----	65
11.	Idealized diagram of the forms of bed roughness in an alluvial channel -----	68
12.	Definition sketch for bed elevation accounting -----	71
13.	Diagram illustrating bed composition accounting procedures -----	71

## TABLES

---

		Page
TABLE 1.	Distribution of Cu in a marine sediment sample -----	11
2.	Distribution of Mn in two marine sediment samples -----	12
3.	Reagents employed in sequential partial chemical extractions -----	14
4.	Percentage of the total variation in concentration of Ag, Cd, Co, Cu, Pb, and Zn in two deposit feeders from 17 estuaries explained by statistical correlation with metal in various locations -----	48
5.	Summary of various factors that appear to inhibit or enhance the availability of sediment-bound trace metals to benthic organisms -----	49
