SESSION 1: WOOD HANDLING

Key-note speaker: Matti Niranen, Veitsiluoto Oy
Wood handling—the link between forest and pulp—How to solve the problems of the eighties 6
Wood handling for increased utilization of wood resources. Kurt Johansson, KMW Handling Technology 10
A new bunch delimbing machine. Staffan Eskilsson, Fröfors Bruk AB 16
Reclaiming of bulk materials with Lönström circular screw reclaimer LPE. Slow-speed rotor crusher. Viljo Hirvonen, Lönström Oy 21
Applications of wear-resistant rubber products and low friction materials in the pulp and paper industry. Per Ivar Mickelson, Skega AB 23
Chip screening operations on Liwell screens. Aspects of primary and secondary applications. Yngve Stade, Korsnäs-Marina Aktiebolag 27
Chip thickness screening—a pulping process at Fiskeby mill. Lars Ektund, Fiskeby AB 31

SESSION 2: PULP PRODUCTION

Key-note speaker: John S Fujii, Crown Zellerbach Corp. Pulping technology—transition into the 1990's 8

Section 1: Pulp in high yield pulps
Chemimechanical pulp, the new fiber for papermaking. Ingemar L A Croon, CroonConsult 36
CTMP—the pulp of the future. Görgen Åkerlund, Sunds Defibrator AB 42
Use of PGW pulp in various paper and board grades—update of mill operations. Risto Karojrvi, Tampella Ltd 47
A new generation large refiners for TMP and CTMP. Karl-Gunnar Ryberg, Sunds Defibrator AB 54
Low consistency refining—a new technique. David H Robinson, Beloit Corporation 50
FROTAPULPER for high-yield pulp. Elisabeth Forsman-Andtbacka, AB Karlstads Mekaniska Werkstad 56

Section 2: Chemical pulps
A new low energy batch cooking system. Lars T Sjödin, Lars E Näsman, Sunds Defibrator AB 60
Rader low energy batch pulping system. Folke Lindgren, Rader International AB 66
GR Method for digester discharge, pulp washing and heat recovery in batch digesting. Arvi A R Rönnholm, Rosenlew Engineering 70
Modified continuous kraft pulping—a way to decrease lignin content and improve pulp quality. Birgitta Johansson, Johan Möjöberg, Peter Sandström, Ants Teder, STFI, Swedish Forest Products Research Laboratory 75
Horizontal pulp washer operation at low dilution factors. Kenneth A Coffey, The Black Clawson Company 82

Section 3: Bleaching of chemical pulps
The pressure diffuser—a new versatile pulpwasher. Per Chr Knutsen, Finn Jacobsen, Kamyr AB 97
Principal differences and similarities between bleaching with hypochlorite and with chlorine dioxide. Peter Axegård, Disa Tormund (STFI), KemaNord 100
One year of experiences from the first three stage bleaching sequence, (C+D) (EO)D, based on oxygen alkali extraction. Gunnar Carré, Lars Näsman, Sunds Defibrator AB, Leif Bousard (Norsundet Bruks AB), Lars-Ake Lindsström (SCA-Teknik) 107
Reinforcement of alkali extraction stages with hydrogen peroxide. Jan Höök, Lennart Meuller, Stefan Wallin, Eka AB 111
Ozone bleaching of sulfite pulp—a pilot plant study. Olof V Simonson Sunds Defibrator AB, Solveig Nordén (SCA Teknik AB) 112
Papritext system-electrochemical corrosion protection for bleach washers—engineering considerations and case histories. Jan Munro, Corrosion Service Co Ltd 122
Generation and recovery of bleaching chemicals. Lars Uhlin, MoDoCell AB 123
Pressure filter as bleach plant washer. Hanna Hakanmäki, Rauma-Repola Oy 127

SESSION 3: PAPER PRODUCTION

Key-note speaker: Jürgen Hoppe, Nordland Papier GmbH Evaluation of new processes and machinery for papermaking 132

Section 1: Forming
New method for improving fourdrinier drainage. Michael J Morley, Albany International 140
New types of forming fabrics. Lars B Österberg, Nordiskafilt AB 146
The FORMATOR system—a superior technique for paper sheet forming. Henrik O Nisser, Stora Kopparberg AB 150
Möllycke FLEXIFORMER. P Lennart Reiner, Möllycke AB 156
Multilayering on a roll former. Ingmar Andersson, KMW Development Center 158
The Dynaformer—a new concept for a family of formers. Giovanni Deperis, Over Meccanica S.p.A. 170
Experience from Symformer R. Keith G J Johansson, Hylte Bruks AB 176
A fourdrinier top wire former for increased productivity and twin-wire sheet characteristics. James J Clarke, Black-Clawson Kennedy Ltd ........................................... 182
Hybrid formers. John H Warwood, Ian J Bergström, Beloit Corp .......................................................... 187

Section 2: Pressing—drying
The Beloit extended nip press. Alan Lush, Beloit Walmsley Ltd .......................................................... 192
Mill experience from extended nip press. Klas Löfgren, SCA Nordliner AB ........................................ 196
High impact presses. Bengt Johansson, KMW Development Center ....................................................... 199
Update on hot pressing results. Keith A Cushall, Midland-Ross of Canada Ltd. ................................. 206
New production technique for the clothing of presses in the paper and board industry. Paul J Kennedy, Dieter Dorr, Thomas Josef Heimbach GmbH & Co. .............................................. 208
How vibration analysis can improve press section efficiency. Richard W Hoyland, Scapa-Porritt Ltd. ..... 214
New instruments to measure clothing performance. Nils T Nordander, Nordiskafilt AB. .......... 219
‘Febopren’ roll coverings in cast polyurethane. Diethelm Schumacher, Felix Böttcher GmbH & Co. ... 225
Improved operation of the dryer section by using Valmet dryer bars. Markku R O Saastamoinen, Valmet Corp. .................................................................................. 228
Radiofrequency assisted aid impingement dryer. Geoffrey Swift, Greenbank-Darwen Engineering Ltd. 234
Experiences from the STFI/Leckner spray applicator on tissue machines. Holger Hollmark, STFI, Swedish Forest Products Research Laboratory. ........................................ 238

Section 3: Chemicals
Compozil—a multifunctional system of paper chemicals. Kjell R Andersson, Eka AB. .................. 241
Polyaluminium chloride at resin sizing at higher pH. Beri Wernäs, AB CD&M ........................................ 244
Fillers as function chemicals. Christer E Holm, Boliden Kemi AB ......................................................... 245
EXPANCEL (R) expandable microspheres in paper and board. Mark Lunabba, KemaNord Plast AB. .... 250
Zirconium chemicals in the paper industry. Ian McAlpine, Magnesium Elektron Ltd. .................. 254
Synthetic sizing by the fibran R.70 process. James I Read, Laing National Ltd. .................................. 259
In mill preparation of cationic starch. Per H Jonsson, Billerud AB ......................................................... 262
Production and application experience of high-filled CTMP-containing papers. Per G Bäteel, Eka AB. 263

Section 4: Miscellaneous
High consistency screening—its potentials and applications. Per-Olof Wedin, SCA Teknik AB. .......... 264
The Beloit uniflow cleaner, a novel concept in hydrocyclone technology. Graham B Chivrall, Beloit Corp. .......................................................... 266
A new concept in white water filtration. Dan Kaiser, Dover Corp/Ronningen-Petter Div. ............... 272
Pump sealing water and felt shower water from white water by use of new filter technology. Hans F Larsson Axel Johnson Engineering AB, Göran Lindholm (Metallitton Teollisuus). .......................... 275
Larsson Axel Johnson Engineering AB, Göran Lindholm (Metallitton Teollisuus). .......................... 275

SESSION 4: PAPER FINISHING, COATING AND CONVERTING

Key-note speaker: Pierre Lepoutré, P&P Research Inst. of Canada. New techniques in coating and converting. .......................................................... 292

Section 1: Finishing
Report about improved smoothness and profiles withÄQUITHERM-R chilled iron calender rolls operated between 60 C and 120 C. H Michael Zaoralek, Schwäbische Hütenwerke GmbH. .................................................. 296
Automatic cutting and conveyance of cores to high-speed winders. Ingvar Boqvist, Treom i Falkenberg AB. .................................................................................. 304
Modern roll finishing—new developments in the field of paper roll handling and wrapping. Bengt Thordén, Lamb AG. .................................................. 310
Advances in roll finishing and their effect on man-power. Hugh E Glass, Sunds Defibrator Ltd. .......... 313
The Silane paper treatment system, an update on the technology. Charles F Robbart, Silane Corporation. .......................................................... 316

Section 2: Coating
Calcium sulphate as coating pigment. Bengt Mårtenssson, Boliden Kemi AB. .......................... 319
Improved printability from new coating pigments. David A Clark, Engelhard Corp. .......................... 323
Double shaft mixing—the new way of coating pigment dispersion. Jarmo Soderman, Finnish Sugar Co. Ltd. .................................................................................. 328
The Dahlgren “Liquid application system” (LAS), the only real effective method of curl control. Michael Bridges, Spooner Industries Ltd. .................................................. 332

Section 3: Converting
The gluability of coated board: The changing role of styrene-butadiene latex. John Bennett, Dow Chemical Europe S. A. .......................................................... 336
Paper sack production with special reference to the end users. Tage L Lindberg, Pascac AB. .......... 340
Automation and rationalization of the paper sack production by means of process control systems with the help of micro-electronics. Werner Schiffmann, Windmöller & Hölscher. .......................... 342
Icona System 2000—modern production and filling of pinch bottom sack. Magnus Wikholm, Icona Packtechnik GmbH. .................................................. 344
SESSION 5: PROCESS CONTROL

Key-note speaker: Sven Gunnar Edlund, STFI, Swedish Forest Products Research Laboratory. Requirements for integrated control of quality and productivity.

Section 1: Instrumentation systems

The universal man-machine interface—new horizons for effectiveness of mill process control operations. Chris Wilmering, Honeywell Europe. 346

Experience from video-based instrumentation system in paper mill, J Börje Moberg, Stora Kopparberg AB. 351

Vision 2002-TM network: An advanced concept in millwide control. Phil Trapp Measurex Corp, Pat P O'Neill (Measurex International Systems Ltd. 358

Millwide production and process control. Jim Wright, Sentrol Systems Ltd. 364

Distributed computing functions in an integrated control network. Chris Wilmering, Honeywell Europe. 368

Data handling in mixed system environments. William L Adams, AccuRay Corp. 371

Section 2: Sensors and sensor based control

Pioneering new sensor for non-contact measurement of moisture content and temperature of moisture content and temperature of moving webs of paper. Antonio E Chichieron, Novasina Corp. 374

On-line pulp characterization by hydrodynamic methods. Kjell Ljungkvist, Chalmers University of Technology. 377

An apparatus for consistency determination in 1-5% pulp suspensions. Olle Axell, Royal Institute of Technology. 381

On-line colour measurement in the paper industry: A review with case histories. Hugh Laverie, Macbeth. 384

The control of colour on a paper machine. Ken L Todd, C Free1, V R Holding, Babcock-Bristol Ltd. 386

Colour measurement and control: the present state of the art. Raymond P Shead, Measurex International Systems Ltd. 384

Moisture and basis weight measurement and control in pulp drying machines. Inge S Rosengren, Skandinaviska Procesinstrument AB. 393

Section 3: CD-control of paper machines

Model-based cross direction control. Ross M Elliot, Sentrol Systems Ltd. 396

The thermal hydraulic approach to automatic slice lip control. Dough W P Smith, P Eng, Devron Engineering Ltd. 401

Profile manager—the application of a self-tuning regulator to CD controls. William L Adams, AccuRay Corp. 405

Process measurement requirements for cross machine control. Robert J Pfeifer, AccuRay Corp. 410

Improved caliper/hardness profile control using infrared energy calender roll heating. Kari Hildén, Devron Engineering Ltd. 416

Quality and capacity improvements with new infrared drying system for moisture profile control. Hans Erik Nilson, Infrarotdeknik AB. 427

Electromagnetic radiation for CD moisture control. Reinhold C Roth, TechMark Corp. 431

Section 4: Energy—modelling—millwide

Experiences with control of kraft black liquor recovery boilers of differing furnace design. John P Spanbauer Measurex International Systems Ltd. Kenneth Goito (Measurex Corp.). 440

A computer based energy management system at a Finnish pulp and paper mill. Raimo Sutinen, Pekka Muskari Oy Advanced Forest Automation Ab, Matti Siro (Oy With Schauman Ab). 444

HEATSAVE—a computer program for energy and process condition monitoring and simulation. Arne Palm, Benko A.S. 452

PQM application in modern newprint manufacture. Jan Hill SCA Control System AB, Bert Johnsson (ASEA AB). 454

Millwide system case study. Nicholas J Jermihov, AccuRay Corp. 466

Computer organized process engineering. Paul H Wilson, H A Simons (International) Ltd. 466

Section 5: Control in finishing

Microprocessor control of extrusion coating and laminating plant. Giles B Allen, Bone Markham Ltd. 470

New achievements in roll wrapping. Matti Tuunanen, Oy Wärtsilä Ab. 476

Modern equipment for improving winder capacity and roll quality. Pekka V Komulainen, Oy Wärtsilä Ab. 479

ASEA Rolltrimmer—a system to improve paper roll quality. Lars Lind, ASEA. 482

Section 6: Paper chemistry control

Wet and chemistry—from chaos to control. Per Jerkeman, Celpap International AB. 488

The development of an integrated retention control system. Tom S Lindström, Staffan Rydefalk, Lars Wåberg, STFI, Swedish Forest Products Research Laboratory. 492

Paper chemistry control. Jan Nobel, Boliden Kemi AB. 498

Section 7: Determination of extractives

Soxtec System HT for rapid testing of resins in paper pulp. Hans B E Halvarson, Tecator AB. 500
SESSION 6: ENERGY SAVING AND ENVIRONMENTAL PROTECTION

Key-note speaker: Rolf Brännland, Mo och Domsjö AB. New Techniques in environmental protection and energy saving can go hand-in-hand

Section 1: Environment
First experiences from anaerobic treatment of pulp and paper mill effluent at Hylte Bruk. Stig R L Karlsson, Hylte Bruks AB.

Section 2: Energy-apparatus
Efficiency increase by burning dry refined waste fuel. Lennart E G Eriksson, Lecomb AB.
New development in evaporative condensers. Axel E Rosenblad, Rosenblad Corporation.
New lamella heat exchanger for the pulp and paper industry. Kjell O Eriksson, MoDo-Chemetics AB.
A solution for steady and economical operation of recausticizing and lime kiln. Periti J Heitto, Larox Oy.
Energy saving in boilers by keeping heat surfaces constantly clean with infrasonic. Thomas C G I Wernhoff, Infrasonik AB.

Section 3: Energy-process
The energy situation in a modernized pulp and paper mill. Karl Wiklund, MoDoCell AB.
Pulverized biomass replaces fuel oil in the pulp and paper industry. Lennart H Hansson, Flakt Industri AB.
Efficient firing of wet bark and wood. Wood fired boilers for burning high moisture fuels. Ronald B Jägerlund, Götaaverken Energy Systems AB.
MC pre-evaporation system at the Skoghall mill. Lennart Ohlsson, MoDo-Chemetics AB.
Lime kiln firing with generator gas. Lars Olauson, IPK-Industrins Processkonsult AB.
Teller system for recovery boiler emission control. Edward M Small Teller Environmental Systems Inc.

SESSION 7: BUILDING FIBREBOARD AND PARTICLE BOARD

Key-note speaker: Thomas M Maloney, Washington State University Board development and use in the United States—do they relate to Europe.
The OPTI-KNIFE System—a new concept for economic flake production. Hans F Sybertz, MHG Maschinenfabrik Hombak GmbH.
Current glueing technology for wood fibres and flakes with larger surface areas. Wilhelm Oldemeyer, Gebrüder Lüdige, Maschinenbau GmbH.
Lecköby-Motala cross-end inline orienters. Arne Larsson, KMW.
StrongLook, the OSB-board from Byggelit Lockne AB. Sveneric Ericsson, Byggelit Lockne AB.
Will continuous presses replace existing presslines for wood based panels. Peter H Wiecke, Sunds Defibrator Inc.
Design features of a modern wet process hardboard plant. Leif O Klinga, Gunnar Graw, Sunds Defibrator AB.
FIREX—A fire resistant particle board. Leif Sonninger, Swedspan AB.
Bonded wood-based panels: Adhesives systems for the eighties. E Birger Sundin, AB Casco.
Energy cost optimization of chip drying in particle board factories. Göran Gatenfjord, ÄF-Energikonsult AB.
Some experiences from the first MDF-plant in Scandinavia. Per Å Åsberg, Masonite Fiberträt AB.
The papers in the preprint book have not been reviewed, edited, or proof-read and are not to be printed or reproduced without permission. Changes may be made before serial publication.
