PRECISION OPTICAL GLASSWORKING

A manual for the manufacture, testing and design of precision optical components and the training of optical craftsmen

W. Zschommler

English translation by G. K. Sachdev and J. Maxwell of Feinoptik-Glasbearbeitung (Werkkunde für den Feinoptiker)

Additional chapters by G. K. Sachdev and J. Maxwell

Preface to German Edition x

Translators' Foreword xi

PART I: THE MANUFACTURE OF OPTICAL COMPONENTS 1

Introduction: Optical Components 3

1 Manufacture of Photographic Lenses by the Pitch-pellet Sticking Method (20 operations in accordance with table 1.1) 5

   Operation 1: Issue of material 6
   Operation 2: Cutting glass blocks into slices 9
   Operation 3: Plates to be rough ground to size 10
       Milling plates with diamond milling tools 12
   Operation 4: Marking and cutting plates to size 14
       Economised scribing and parting 14
   Operation 5: Checking cut pieces for bubbles and striae 16
   Operation 6: Making stacks of cut pieces for initial rounding 17
   Operation 7: Rounding the stack of cut pieces into a cylinder 17
   Operation 8: Sticking blanks on the block holder 18
       Calculation of radii for block holders and laying-in shells 20
   Operation 9: Rough and fine grinding of lenses on block holders 28
       The loose abrasive grinding process 29
       Correction of grinding shells 32
   Operation of grinding and polishing machines 36
       Effects of different adjustments on grinding machines 39
   Turning and milling of spherical shells 42
       Smooth grinding with diamond tools 46
   Operation 10: Polishing lenses on block holders 46
       The polishing process 50
   Operation 11: Unblocking lenses from pelleted block holders 54

v
## CONTENTS

Operation 12: Cleaning the lenses  
The automatic cleaning of optical components using ultrasonic cleaning methods 55

Operation 13: Centration of lenses 55  
Centration by the observation of reflected images 56  
Optical centration with transmitted light 57  
Optical centration by autocollimation 58  
The edging of lenses 58  
Accuracy obtainable with optical centration methods 60  
Mechanical centration with the bell-clamping method 62  
Centring accuracy in the bell-clamping method 64

Operation 14: Chamfering of lenses 67

Operation 15: Inspection of lenses 70

Operation 16: Polishing correction of lenses 73

Operation 17: Coating of lenses with reflection-reducing films 75  
Antireflection coating as a protection against stain formation on polished glass surfaces 76  
Stain formation on optical glass 76

Operation 18: Optical cementing of lenses 77  
Cementing with Canada balsam 77  
Cold cementing methods 80

Operations 19 and 20: Final inspection and pairing of components 81

2 Manufacture of Photographic Objective Components on Hard Block Holders (28 operations in accordance with table 2.1) 85

# Contents

3 Manufacture of Binocular and Telescope Lenses  
Inspection of telescope objectives for resolving power  
4 Manufacture of Microscope Lenses  
(6 different process descriptions, according to the form of the lenses)  
(1) Microscope lenses that may be, or have to be, edged before polishing (with two examples)  
(2) Sharp-edged microscope lenses that do not require edging (with two examples)  
(3) Microscope lenses where both sides must be individually worked (with an example)  
(4) Microscope lenses whose first side may be processed on hard block holders, and whose second side is worked as a single surface (with an example)  
(5) Microscope lenses whose first sides are worked individually, and whose second sides are worked on hard block holders (with an example)  
(6) Objective front lenses that are made from glass spheres  
Testing and inspection of microscope objectives  
5 Manufacture of Objectives for Astronomical Instruments  
6 Manufacture of Test Plates  
Measuring the radii of test plates  
7 Manufacture of Low-cost Curved Mirrors  
The generation of curves using the method of thermal sagging  
Aspheric surfaces made by the oil impression method  
Aspheric form correction using an adjustable grinding strip  
Optical testing of steeply curved mirrors  
8 Manufacture of Aspheric Surfaces on Lenses  
Numerically controlled aspheric surface cutting using specialist lathes and milling machines  
9 Manufacture of Prisms  
1. Porro prisms of the first type (23 operations in accordance with table 9.1)  
   Manufacture of Porro prisms of the first type from moulds  
   Manufacture of Porro prisms by cementing them on supporting jigs
2. Dove prisms 192
3. Porro prisms of the second type (27 operations in accordance with table 9.2) 194
4. Pentagonal prisms 202
   Pentagonal prisms of 5 minutes of angular accuracy (14 operations in accordance with table 9.3) 202
   Pentagonal prisms of higher angular accuracy 206
   Pentagonal prisms of the highest accuracy using optical contact tooling (13 operations in accordance with table 9.4) 207
5. Roof edge prisms 211
   The manufacture of roof edge prisms by hand methods (16 operations in accordance with table 9.5) 212
   The manufacture of optical contact tooling bars 219
   Mass production of prisms 221
   Mass production methods in optical production engineering 223

10 Process Materials and Process Control 225
   Loose abrasive smoothing 226
   Diamond smoothing 229
   Measurement and control of surface finish 229
   Polishing rouge 230
   Diamond milling tools 230
   Cooling oil for milling 230
   Polishing pitch 232
   Cements and waxes 233

PART II: OPTICAL CALCULATIONS, SPECIFICATIONS AND INTERFEROMETRIC TESTING 235

11 Optical Calculations 237
   Focal length, magnification and lens position 238
   Paraxial ray tracing 242

12 Optical Specifications 252
   (1) Focal length and magnification 252
   (2) Aperture: resolution, working spatial frequency and photometric requirements 253
   (3) Field of view and vignetting 256
   (4) Chromatic bandwidth 260
   (5) Mechanical position and size 261
   (6) Aperture position 262
