FOOD IRRADIATION FOR DEVELOPING COUNTRIES IN ASIA AND THE PACIFIC

REPORT OF A SEMINAR ON FOOD IRRADIATION FOR DEVELOPING COUNTRIES IN ASIA AND THE PACIFIC AND OF A RESEARCH CO-ORDINATION MEETING ON THE ASIAN REGIONAL CO-OPERATIVE PROJECT IN FOOD IRRADIATION, BOTH HELD IN TOKYO, JAPAN, 9–13 NOVEMBER 1981, JOINTLY ORGANIZED BY THE INTERNATIONAL ATOMIC ENERGY AGENCY AND THE FOOD AND AGRICULTURE ORGANIZATION OF THE UNITED NATIONS

A TECHNICAL DOCUMENT ISSUED BY THE INTERNATIONAL ATOMIC ENERGY AGENCY, VIENNA, 1982
CONTENTS

Summary of FAO/IAEA Seminar on Food Irradiation for Developing Countries in Asia and the Pacific ................................................................. 7

INVITED PAPERS

Factors impeding practical application of food irradiation in developing countries .... 21
H. Glubrecht

Wholesomeness of irradiated foods .................................................................. 31
J.F. Diehl

Current status of food irradiation program of the USDA with special emphasis on irradiation processing of red meat and poultry .......................... 39
J.W. Harlan

National food irradiation programme of Japan .............................................. 51
M. Fujimaki

Food irradiation as a quarantine treatment of fruits ........................................ 57
A.K. Burditt, Jr.

Regulatory control of and international trade in irradiated foods .................... 89
L.G. Ladomery

Considerations on economics and energy requirements of food irradiation applications in developing countries: Anticipated benefits of irradiation ................................. 99
W.M. Urbain

CONTRIBUTED PAPERS (Abstracts only)

Food irradiation in the Western United States of America ............................. 115
N.E. Nielson

Time temperature tolerance and packaging studies of irradiated dried fish:
  bacteriology of irradiated dried fish ............................................................ 117
M. Ahmed et al.

Semi-pilot study on the radurization of dried mackerel (Pneumatophorus japonicus) for extension of shelf-life .................................................... 118
G. Guevara et al.

Studies on bulk packaging of irradiated dried fish .......................................... 119
M. Maha et al.

Improving the hygiene and quality of dried shrimp by irradiation ................. 120
P. Vibulsresth et al.

Effect of packaging films in prevention of slime formation of gamma irradiated Vienna sausages ................................................................. 121
H. Ito et al.

The effect of gamma radiation on the volatile components, piperine and piperettine contents and sensory quality of black and white pepper (Piper nigrum L.) ......................................................... 123
S. Ishak et al.

Gamma irradiation of spices ........................................................................... 124
T.S. Saputra et al.

Preliminary investigations for irradiation preservation of mangoes, dried fish and spices ................................................................. 125
K. Thivelendirarajah

Radiation effect, packaging studies and economic evaluation of irradiated onions in Korea ................................................................. 126
H.-O. Cho
The technological feasibility of gamma radiation for the extended commercial storage of agricultural crops: (1) onions, (2) garlic ........................................... 127
A.O. Lustre et al.

Pilot-scale studies on the irradiation of Bangladesh onions ........................................... 129
M.M. Hossain et al.

Identification of irradiated potatoes by impedance measurements ................................. 130
K. Kawashima, T. Hayashi

Respiratory metabolism and potassium release of irradiated potatoes ............................ 131
K. Chachin, T. Iwata

Agar color dosimeter and its application to sprout inhibition of potatoes by electron irradiation ........................................................................................................ 132
J. Furuta et al.

Disinfesting of fruit against Queensland fruit fly by gamma irradiation ............................ 133
C.J. Rigney, P.A. Wills

Effects on storage life and quality of irradiated mangoes .................................................. 134
D. Buangsuywon et al.

Integrated studies of irradiated Philippine mangoes ....................................................... 135
J.A. Manalo et al.

Radiation preservation of dried fruits in Pakistan ............................................................ 136
I. Khan et al.

Prospects and problems of commercial irradiation of onions and potatoes
in India ......................................................................................................................... 137
P. Thomas

LIST OF PARTICIPANTS ............................................................................................... 139
