Contents

A Computational Model of Knowledge-Intensive Learning and Problem Solving ................................................. 1
   A. Aamodt

Multiple Knowledge Acquisition Strategies in MOLTKE .................. 21
   K.-D. Althoff, F. Maurer and R. Rehbold

Shelley – Computer Aided Knowledge Engineering ...................... 41
   A. Anjewierden, J. Wielemaker and C. Toussaint

StrucTool: Supporting Formal Specifications
of Knowledge-Level Models ............................................. 60
   J. Balder and H. Akkermans

Capturing Design Knowledge for Engineering Trade Studies .......... 78
   J.H. Boose, D.B. Shema and J.M. Bradshaw

Knowledge Acquisition via Knowledge Integration .................. 90
   P.B. Brazdil and L. Torgo

Producing Visually-based Knowledge Specifications
for Acquiring Organizational Knowledge ................................ 105
   J.P. Davis and R.D. Bonnell

Integration of Knowledge from Different
Knowledge Acquisition Tools ............................................. 123
   J. Eggen, A.M. Lundteigen and M. Mehus

Development of Second Generation Knowledge
Acquisition Systems ...................................................... 143
   B. Gaines and M. Linster

Validation of User Intention .............................................. 161
   T. Hoppe

Model-Based Approaches: one label – one idea? ......................... 173
   W. Karbach, M. Linster and A. Voss

Comparison of Inductive and Naive Bayesian Learning Approaches
to Automatic Knowledge Acquisition .................................. 190
   I. Kononenko

On the Use of a Formalized Generic Task Model
in Knowledge Acquisition ............................................ 198
   W. Kowalczyk and J. Treur
ALTO: An Automated Laddering Tool ........................................ 222
   N. Major and H. Reichgelt

A Flexible Six-Step Program for Defining and
Handling Bias in Knowledge Elicitation .................................. 237
   M.A. Meyer, J.M. Booker and J.M. Bradshaw

Methodological Foundations of Keats,
The Knowledge Engineers' Assistent ..................................... 257
   E. Motta, T. Rajan, J. Domingue and M. Eisenstadt

Decision Tree Induction using Domain Knowledge ..................... 276
   M. Nunez

Towards Knowledge Acquisition from Domain Books ..................... 289
   L. Ruqian and C. Cungen

Case-Oriented Knowledge Acquisition from Texts ...................... 302
   G. Schmidt and F. Schmalhofer

Knowledge-Based Knowledge Acquisition:
The next generation of support tools .................................... 313
   N. Shadbolt and B.J. Wielinga

Cases, Models or Compiled Knowledge;
a Comparative Analysis and Proposed Integration .................... 339
   M. van Someren, L.L. Zheng and W. Post

First Order Logic Foundation of the KADS Conceptual Model ...... 356
   T. Wetter
