ACHIEVEMENT IN COMPOSITES IN JAPAN AND THE UNITED STATES

Edited by
Akira KOBAYASHI

Proceedings of the Fifth Japan-U.S. Conference on Composite Materials
June 24-27, 1990, Tama-City, Tokyo, Japan

Sponsored by
The Japan Society for Composite Materials

Supported by
American Society for Composites
American Society of Mechanical Engineers
American Society for Testing and Materials
Society for Experimental Mechanics

Parthenon Tama
Table of Contents

Preface ................................................................. I
Conference Organizing Committee ........................................ II
Schedule of Conference .................................................. III
Table of Contents ....................................................... IV

Opening Session: A. Kobayashi and K. L. Reifsnider

Keynote Speech 1

Chairmen: K. L. Reifsnider and Tsuyoshi Hayashi
Characterization of Composites and Polymers in High Strain Rate Tension
by K. Kawata .............................................................. 1

Keynote Speech 2

Chairmen: R. L. Sierakowski and S. Umekawa
Performance Simulation: A New Approach to the Prediction of Remaining Strength
and Life of Material Systems
by K. L. Reifsnider ...................................................... 3

Session 1A Ceramic Matrix Composites I

Chairmen: K. Prewo and Y. Kagawa

Influence of Partial Interface Debonding on Composite Moduli
by G. P. Tandon and N. J. Pagano ................................................ 15

Characteristics of Porous C/C Composites as Electrode Substrates for Phosphoric
Acid Fuel Cell
by H. Fukui, M. Inoue and A. Kitamura ........................................... 23

Mechanical Behaviors of Ceramic Matrix Composites with Matrix Cracking and Fiber
Debonding
by W.-S. Kuo and T.-W. Chou ................................................... 31

Strain Measurements by Image Processing Techniques and Its Application to Ultra-
High Temperature Tensile Testings of Carbon/Carbon Composites
by K. Hirano ................................................................. 39

Session 2A Ceramic Matrix Composites II

Chairmen: A. K. Dhingra and H. Miyairi

Mechanical Properties of SiC Whisker/Glass Composite
by Y. Kogo and Y. Kagawa ...................................................... 47

Fracture Mechanism of a High Compliance, High Failure Strain Glass-Matrix Composite

The Effect of Whisker Dimensions on Mechanical Properties of SiC-Whisker/Al₂O₃
Composites
by E. Yasuda, T. Akatsu and Y. Tanabe ........................................... 63

Matrix Microcracking in Ceramic Matrix Composites Under High Temperature
by F. Delale, Y.-L. Xu and B. M. Liaw ........................................... 71

In Situ Formation of Al₂O₃/Si Composites by Directed Oxidation of Liquid
Al Alloy
by Y. Kagawa, A. Okura and S. Watanabe ........................................ 79
Session 3A Impact
Chairmen: C. T. Sun and N. Takeda

An Analysis of Impact Resistance of Composite Blades for Turbo-Fan Engines
by T. Miyachi, H. Okumura, K. Ohtake and Y. Sofue

The Mechanical Properties in High Velocity Tension of CFRP, KFRP and CF/KF Hybrid Composites
by G. S. Ger, K. Kawata and M. Itabashi

Nonlinear Transient Analysis of Composite ATP Blade Model
by H. Okumura, K. Ohtake, A. Ogawa, R. Hashimoto, T. Kawashima, Y. Tanaka and T. Natumura

Session 4A Testing and NDI
Chairmen: H. T. Hahn and A. Okura

Bending Strength of Advanced Composites by Means of a New Bending Test Method
by H. Fukuda

Flexural Testing and Evaluation Methods of Advanced Composite Materials
by M. Uemura and H. Iwai

Ultrasonic Methods for Mechanical Characterization of Fiber-Reinforced Composite Materials
by S. C. Wooh and I. M. Daniel

On Use of Electrical Conductivity for Detecting Flaws and Delaminations in CFRP Composite Laminates
by K. Moriya

Session 1B Composite Structures
Chairmen: C. A. Rogers and K. Kageyama

Static Aeroelastic Tailoring of Composite Aircraft Swept Wings Modelled as Thin-Walled Beam Structures
by L. Librescu and O. Song

Three-Dimensional Material Design by the Use of Multi-Axially Reinforced Preform
by H. Hatta and S. Yamashita

Compressive Failure Mechanisms of Composite Honeycomb Cores
by H. A. Huang and H. T. Hahn

Flexural Deformation and Fracture Behavior of Advanced Composite Structures
by H. Takayanagi, H. Sembokuya, K. Kemmochi, M. Hojo and H. Maki

Session 2B Interlaminar Fracture Toughness I
Chairmen: A. Miyase and H. Fukuda

Energy Release Rate of Delamination at Transverse Crack Tips
by K. Kondo

Micromechanism of Mode I Delamination Fracture in Graphite/Epoxy Composite
by A. Todoroki

Interlaminar Reinforcement of Laminated Composites by Intermingled 3-Dimensionally Oriented Micro Fibers
by S. Yamashita, H. Hatta and T. Takei

Influence of Specimen Thickness on Mode I Interlaminar Fracture Toughness of ASA/PEEK and T800/Epoxy Laminates
by M. Hojo, Y. Tateishi and T. Aoki

Delamination Resistance of Composite Laminates
by W. S. Chan
Session 3B Interlaminar Fracture Toughness II
Chairmen: D. J. Wilkins and H. Maki

Fracture Toughness of a Fiber-Reinforced Ceramic Composite Under Mode I and Mode II Loadings
by S. Mall and M. A. Hoobler ........................................................211

A Finite Element Analysis Model of Interlaminar Delamination of Laminated Composites
by S. Takada, I. Kimpara and I. Ohsawa ........................................219

Proposed Methods for Interlaminar Fracture Toughness Tests for Composite Laminates
by K. Kageyama and M. Hojo ........................................................227

Session 4B Stress Analysis
Chairmen: G. P. Tandon and K. Kondo

An Efficient Global-Local Model for Thick Composite Laminates
by H.-S. Jing and M. Hwang ...........................................................235

Mechanical and Thermomechanical Stress States in Wound, Composite Rolls
by R. C. Reuter, Jr. ........................................................................245

Stress Analyses of Thick Walled Cross-Ply Composite Cylindrical Shells Taking Account of Curing Stresses
by O-Il Byon and J. R. Vinson .......................................................257

Application of Carbon Fiber and Aramid Fiber Reinforcements to Upper Resin Denture Bases
by H. Miyairi, M. Nagai, H. Fukuda and Y. Takayama ........................265

Session 5A Metal Matrix Composites I
Chairmen: T.-W. Chou and K. Wakashima

Viscoelastic Numerical Methods for Stable and Unstable Metal Matrix Composite Materials
by K. C. Gramoll ...........................................................................273

Shear Creep Deformation of SCS6/Ti-6Al-4V Metal Matrix Composite at Elevated Temperatures
by A. Miyase and S. S. Wang ..........................................................283

Effect of Thermal Cycling on Mechanical Properties of Carbon Fiber Reinforced Aluminum Alloys with Particulates and Whiskers
by H. Ikuno, S. Towata and S. Yamada ..........................................293

Effect of Thermal Cycling on the Properties of Alumina Short Fiber Reinforced Aluminum
by M. Nakanishi, Y. Nishida and Y. Sakai .......................................301

Session 6A Metal Matrix Composites II
Chairmen: K. Prewo and S. Kimura

Strengthening Mechanisms of Metal Matrix Composites with Various Types of Fillers
by M. Taya, K. E. Lulay and D. J. Lloyd .........................................309

Mixed Mode (I, II) Fatigue Crack Growth Characteristics of Continuous SiC CVD Fiber Reinforced Aluminum and Titanium Alloys Matrix Composites
by K. Hirano, S. Seto and M. Kikuchi ............................................311

Fatigue Crack Propagation Mechanisms of SiC Whiskers or SiC Particulates Reinforced Aluminum Composites
by C. Masuda and Y. Tanaka .........................................................321

High-Temperature Fatigue Crack Growth of SCS6/Ti-6Al-4V Metal-Matrix Composite
by Y. Nakajo and S. S. Wang .........................................................329
Anisotropic Thermal Expansion and Thermomechanical Hysteresis of Multidirectionally Reinforced Metal Matrix Composites: An Elastic-Plastic Analysis
by K. Wakashima and H. Tsukamoto .................................................337

Session 7A Metal Matrix Composites III
Chairmen: A. Miyase and S. Kohara

The Relationship between Interfacial Reaction and Tensile Strength of SiC Filament Reinforced Ti Alloy Composites
by Y. Imai, Y. Shinohara, S. Ikeno and I. Shiota ..................................347

Preparation of fine SiC Particle Reinforced Al Alloy Composites by Compocasting Process
by K. Miwa and T. Ohashi .................................................................355

On the Properties of Sintered Al and Cu Composites from Spherical Composite Powder
by I. Shiota, Y. Imai, Y. Shinohara, S. Ikeno and K. Sakata .......................363

Solid-State Bonding of B4C to Fe Using Al and Al/Mo Interlayer
by K. Nishiyama and S. Umekawa ......................................................371

Thermodynamical Stability between TiC and Ti
by Y. Shinohara, Y. Imai, S. Ikeno and I. Shiota ..................................379

Session 5B Fiber Reinforcement
Chairmen: A. K. Dhingra and I. Shiota

Oxidation Behavior of Mesophase Pitch Based High Modulus Carbon Fibers
by H. Kimura and K. Kubomura ..........................................................387

The Mechanical Properties and the Structures of CVD-Coated SiC Fibers
by J. X. Li, A. Kimura, Y. Matsuo and S. Kimura ..................................395

Mechanical Characterization of Fibers as Reinforcement for Composites
by S. Kohara ......................................................................................403

Advances in Aramid Reinforced Thermoplastic Composites#
by T. C. Pletcher and A. K. Dhingra ..................................................409

Session 6B Fabrication, Micromechanics
Chairmen: T. Mura and T. Ishikawa

Knowledge Base for Expert System Process Control/Optimization
by C. W. Lee and F. L. Abrams ............................................................411

Effect of Interface on the Elastic Moduli of Composites: Successive Iteration Method
by Y. Tong, I. Jasiuk and T. Mori ........................................................419

Micromechanical Stress Analysis of Continuous-fiber Composites with Local Material Property Gradients
by K. Jayaraman and K. L. Reifsnider ..................................................421

Successive Iteration Method Applied to a Composite Containing Sliding Inclusions: Overall Elastic Constants
by S. Shibata, I. Jasiuk, T. Mori and T. Mura .......................................429

Session 7B Mechanical and Thermal Properties
Chairmen: S. K. Chaturvedi and K. Kubomura

Constitutive Relation of Shape-Memory Flexible Composites
by S. Y. Luo, F. Gordaninejad and C. D. Hong ....................................437
Comparison of Tensile and Compressive Properties of Some Structural Elements Between Carbon/PEEK and Carbon/Epoxy Composites
by T. Ishikawa, M. Matsushima, Y. Hayashi and T. Noguchi .......................... 445

Nonlinear Analysis of AS4/PEEK Thermoplastic Composite Laminate Using a One Parameter Plasticity Model
by C. T. Sun and K. J. Yoon ........................................................................ 453

Modeling the Post Yield Behavior of Off-axis Composite Laminae
by S. C. Yen, X. D. Yu and K. T. Teh ......................................................... 461

Thermal Behavior of Electronic Composites with Various Fillers
by H. Hatta, Y. Takei and M. Taya ............................................................... 469

Session 8A Damage and Fracture I
Chairmen: S. K. Chaturvedi and H. Ohira

Mechanical Properties and UV Degradation of Carbon Fiber Reinforced Plastics
by M. Ishibashi, Y. Kaga, J. Fujimoto and T. Tanimoto ............................... 471

Mechanical Properties and Radiation Resistance of Polymer Matrix Composites Used in Superconducting Magnets for Fusion Reactors
by S. Egusa, T. Seguchi and W. Kawakami ............................................... 479

Effects of Radiation on Metal Matrix Composites
by A. Kohyama, H. Tezuka, K. Hamada and S. Sato .................................. 487

Session 9A Damage and Fracture II
Chairmen: F. Del ale and Z. Maekawa

On the Compressive Strength of Laminated Composites
by Tsuyoshi Hayashi .................................................................................. 495

Progressive Cracking in CFRP Cross-Ply Laminates
by H. Ohira ................................................................................................. 497

Multiple Fracture Phenomenon in Composites
by S. Ochiai, K. Osamura, P. W. M. Peters and K. Schulte ......................... 505

On Composite Materials Strength Evaluation Subject to Thermal Environment
by A. Kobayashi, S. Ogihara, N. Ohtani and N. Takeda ............................. 513

Session 10A Damage and Fracture III
Chairmen: K. L. Reifsnider and T. Tanimoto

On the Micromechanical Failure Process of Single Carbon Fiber and Strand in a Matrix

On the Direction of Initial Failure Propagation in a Unidirectional Composite Model
by H. Fukuda ............................................................................................... 529

A Study on Interfacial Effect of Silane Coupling Agent in GFRP with a New Evaluation Technique
by H. Hamada, Z. Maekawa, N. Ikuta, H. Ichihashi and E. Nishio .............. 535

Temperature Dependence of Fatigue Behavior of C/A Hybrid Unidirectional FRP Laminates
by M. Nakada, Y. Miyano, M. Suzuki and Y. Hattori .................................. 543

Inelastic Behavior and Microstructural Change of Graphite/Epoxy Tubes Under Multiaxial Loading
by Y. Kanagawa, S. Murakami, M. Nakayama, T. Ishida and E. Tsushima .... 551
Session 11A Damage and Fracture IV
Chairmen: K. L. Reifsnider and I. Kimpara

Novel Methods to Study the Deformation Behavior of Composite Interphase
by N. Sato, T. Kurauchi and O. Kamigaito ...........................................559

Stress Analysis on Rectangular Plate of Crossply Laminates with an Elliptical Hole
by Takaya Hayashi and Y. Fujiwara ...................................................567

Strength of Graphite/PEEK Laminates Loaded in Compression
by I. Eriksson ......................................................................................575

Stress Distribution along Hole Periphery of Orthotropic Plates Imposed Bolt
Contacting Pressure
by T. Ogasa, H. Yoshida and T. Akasaka ............................................583

Session 8B Plates and Shells I
Chairmen: A. W. Leissa and M. Miki

Aeroelastic Tailoring of Laminated Composite Shear Deformable Flat Panels Exposed
to a Supersonic Coplanar Gas Flow of Arbitrary Direction
by L. Librescu and N. K. Chandiramani .............................................591

Laminate Plate Theory for Spatially Distributed Induced Strain Actuators
by B.-T. Wang and C. A. Rogers .........................................................595

Coupled Thermooelasticity of Graphite/Epoxy Laminates
by A. M. Amin and R. L. Sierakowski ...............................................609

Session 9B Plates and Shells II
Chairmen: L. Librescu and T. Akasaka

Analysis of Very Thick Walled Composite Cylindrical Shells Subjected to Axially
Symmetric Loads
by T. L. Waltz and J. R. Vinson .........................................................619

Recent Developments in Buckling Analysis of Laminated Composite Plates
by A. W. Leissa and Y. Narita .............................................................629

Compressive Behaviors of Composite Panels with a Delamination
by H. Suemasu .....................................................................................637

Session 10B Optimization, Vibration I
Chairmen: L. Librescu and Takaya Hayashi

Strength Optimization of Laminated Composites Using Transformed Design Variables
with Respect to Layer Angles
by H. Fukunaga and G. N. Vanderplaats ............................................645

Expert System for Composites Design with Object-Oriented Language
by M. Miki and Y. Sugiyama ..............................................................653

Forced Vibration of Rectangular Laminated Plates with Material Damping
by K. N. Cho, C. W. Bert and A. G. Striz ............................................661

Free Vibration of Impact Damaged Short-Fiber Composite Plates
by S. K. Chaturvedi and N. A. Zayyad ...............................................671

Session 11B Vibration II
Chairmen: C. A. Rogers and M. Uemura

Free Vibration Analysis of Cantilevered Composite Rectangular Plates
by Y. Narita and A. W. Leissa .............................................................679

Vibrations of Composite Thin-Walled Beams with Designed-In Elastic Couplings
by A. R. Atilgan and L. W. Rehfield .................................................687
CFRP/Damping-Material Laminates
by J. Fujimoto, T. Tamura, M. Adachi, K. Todome, Y. Suzuki, T. Tomoshige
and T. Tanimoto ..........................................................695

Closing Session: A. Kobayashi and K. L. Reifsnider

List of Participants ..........................................................703
Author Index .................................................................707

# Abstract only
