Numerical Methods in Laminar Flame Propagation

A GAMM-Workshop

With 66 Figures
Contents

Preface

Part I : Test Problem A and related papers

Discussion of Test Problem A
N. Peters

Activation-Energy Asymptotics of the Plane Premixed Flame
G.S.S. Ludford

Theoretical Implications of Nonequal Diffusivities of Heat and Matter on the Stability of a Plane Premixed Flame
N. Peters

The Effect of Lewis Number Greater than One on an Unsteady Propagating Flame with One-step Chemistry
B. Rogg

Part II : Test Problem B and related papers

Discussion of Test Problem B
J. Warnatz

On the Use of Adaptive Grids in Numerically Calculating Adiabatic Flame Speeds
M.D. Smooke, J.A. Miller, R.J. Kee

Results of a Study of Several Transport Algorithms for Premixed, Laminar Steady-State Flames
J.M. Heimerl, T.P. Coffee
Influence of Transport Models and Boundary Conditions on Flame Structure
J. Warnatz

Numerical Solution of Burner-Stabilized Premixed Laminar Flames by an Efficient Boundary Value Method
M.D. Smooke, J.A. Miller, R.J. Kee

Toward the Formulation of a Global Local Equilibrium Kinetics Model for Laminar Hydrocarbon Flames
R.D. Reitz, F.V. Bracco

Time-Dependent Simulation of Flames in Hydrogen-Oxygen-Nitrogen Mixtures
K. Kailasanath, E.S. Oran, J.P. Boris, T.R. Young

Mechanism of Flame Propagation in Hydrogen-Air and Methane-Air Systems
S. Fukutani, H. Jinno

Flames near Rich Flammability Limits, with Particular Reference to the Hydrogen-Air and Similar Systems
N.R. Carter, M.A. Cherian, G. Dixon-Lewis

Experimental Investigation of Internal Combustion of Various Fuels
W. Müller
