BREMER BEITRÄGE
ZUR
GEOGRAPHIE UND RAUMPLANUNG

HERAUSGEBER
GERHARD BAHRENBERG, GERHARD STÄBLEIN UND WOLFGANG TAUBMANN

Heft 8

DOK. ERL.

1986
Studiengang Geographie, Fachbereich 8
Universität Bremen
Contents

Preface IX

Part I Theoretical and methodological issues

E.R.A. 778
Landscape: Definitions, methods of analysis and mapping 3
Volker Kreibich
Locational behaviour in a constrained housing market - new approaches to urban migration analysis 23
Harry Timmermans
Subjective preference functions and choice behaviour: Some compensatory and noncompensatory model structures 33
Joost Hauer
General and theoretical considerations on levels and properties 42
Manfred M. Fischer
Theory testing via the latent variable model approach LISREL 60
R.J. Johnston
Environmental influences and ecological analyses: Examples from electoral geography 85
Manfred M. Fischer and Wolfram Droth
Factorial ecology versus cluster analysis: The intra-urban residential structure of the city of Hamburg 99
H. Folmer and H. Barkema
Some methodical aspects of measuring effects of regional economic policy 122
Nedim R. Vlora
The geographical spacetime invariant 140
Günter Löffler
Horizontal versus vertical relations in space - some aspects of spatial "crosscorrelation" 146
Josef Nipper
The impact of temporal persistence on the development of spatially autocorrelated structures - a simulation study 151
Joaquin Bosque, Vicente Rodríguez, José M. Santos
Quantitative geography in the Spanish research and
university

Part II  Methods and techniques

Jan van Est and Frans de Vroege
The data source and information carrier as a base for
spatially oriented information system

H.-J. Heineke and E. Petzold
Evaluation of natural site conditions using geographic
information systems

Gerd Peyke
BASDIG - a program for interactively on-line digitizing of
maps

J.P. Grimmeau
A general algorithm for data simplification in vue
of area mapping - application to the analysis of
point patterns

D.J. Unwin
Non-numerical uses of microcomputers in geography

Stan Openshaw
The classification of large census data sets

D.C. Ament and G.A. van der Knaap
The identification of a frequency distribution:
An analysis of duration of residence data

Paul Gans
An information theory approach to multi-dimensional
contingency table analysis

L.G. O'Brian
Parametric statistical models for categorised data:
A comparison of two regression models

Henk J. Scholten
An estimate for the distribution function by using
the loglinear model

Floor Brouwer and Peter Nijkamp
Multiple rank correlation analysis of regional data

Helga Leitner and Helmut Wohlschlaegl
Incorporating polytomous nominal variables in generali-
ed path analysis
Analysis of non-metric data by means of linear structural equation models

Part III Empirical studies

Regional variations in household and family structures in Western Germany: An application of categorical regression

A discrete choice model framework for tenure choice

A logit model of the willingness to move house

The logit model as an explanatory technique: An analysis of industrial survey data

Describing spatial distribution of migration by means of relative coefficients

Determinants of generative behaviour in German cities at the beginning of the 20th century: A causal modelling approach

The local residential environment and educational attainment: Its effect at two scales

The gravity model: empirical test and improvements in a French city

Modelling hierarchical freight flows

Two approaches of functional regionalization applied to commodity flows between Spanish provinces: A comparative evaluation

Some observations on the statistical difficulties of using international trade data for estimating the effect of economic integration
P.H.L. Bovy
Effects of network travel time errors upon shortest route prediction: Some findings 329

G.R.M. Jansen and P.H.L. Bovy
The effect of network aggregation on shortest-route predictions in urban road networks: Some empirical results - abridged version 334

Robert J. Bennett
Financial contrasts in growing and declining cities in West Germany 340

Denise Pumain
Some empirical evidence on urban dynamics in a set of cities 350

Thérèse Saint-Julien
Social disparities and past growth in an urban system 359

Angel Ramos and Daniel Saénz
Corridor location minimizing environmental impact 368

Kurt E. Klein
Optimal location of consumer facilities within a city 371

Part IV Models in physical geography

Annick Douguedroit
Climatological sequences: Modelisation and applications 379

Wolfhard Symader
Investigations on loess profiles and transects in the Northern Negev (Israel) by means of power spectral analysis 397

David J. Unwin
Modelling the urban heat island 402

Santiago González Alonso and Eugenio Martínez Falero
Erosion and physical planning. Mapping of soil losses at regional level 406

Reiner Schwarz
The significance of the upper timber line frost-dehydration theory - investigated by simulation 411

Ulrich Streit
Estimating areal means and confidence limits from point data 418
