Electron Microscopy in Plasticity and Fracture Research of Materials

edited by
U. Messerschmidt, F. Appel, J. Heydenreich, and V. Schmidt

With 345 Figures and 27 Tables

Proceedings of the International Symposium held at Holzhau near Dresden, 8 to 13 October 1989

organized by the
Institute of Solid State Physics and Electron Microscopy of the Academy of Sciences of the German Democratic Republic (G.D.R.) and the
Section of Electron Microscopy of the Physical Society of the G.D.R. under the auspices of the
International Federation of Societies for Electron Microscopy and the
European Committee of Societies for Electron Microscopy

International Advisory Committee:
H. Bethge, Halle
J. Čadék, Brno
J. Dutkiewicz, Krakow
S. Firstov, Kiev
P. Haasen, Goettingen
J. Heydenreich, Halle
P. B. Hirsch, Oxford
L. P. Kubin, Chatillon
V. N. Rozhanskii, Moscow
H. Saka, Nagoya
V. Schmidt, Halle
D. Schulze, Dresden
G. Thomas, Berkeley

Akademie-Verlag Berlin
CONTENTS

Chapter 1: DEFORMATION OF NON-FERROUS METALS AND ALLOYS

*An in situ study of strength anomalies - Comparison between prismatic glide in beryllium and cube glide in the γ'-phase of a superalloy
  D. Caillard, N. Clement and A. Couret

*The formation of ordered dislocation microstructures
  L.P. Kubin and G. Canova

*Study of large deformation of polycrystalline materials by scanning electron microscopy
  K. Luecke

TEM-investigations on microwires. A contribution to the elucidation of their deformation behaviour
  H. Berek, S. Gaertner, H.H. Daut, R. Juknat and D. Haeussler

Plastic deformation near grain boundaries in molybdenum bicrystals
  M.M. Kantor, L.M. Olshanskii and U. Messerschmidt

The effect of L12 ordered σ' precipitates on the mechanical properties of Al-Li alloys
  J. Lendvai, H.-J. Gudladt, J. Schneider, W. Wunderlich, and V. Gerold

The structure of fcc metals after high strain
  V.I. Levit

Acoustic investigation of dislocation pinning by the ordered atmosphere of oxygen atoms in niobium specimens deformed in situ
  V.V. Zoninashvili, I.A. Naskidashvili and V.A. Melik-Shakhnazarov

Chapter 2: MICROSTRUCTURE AND DEFORMATION OF STEELS

*Peculiarities of strain hardening and failure of sintered materials
  S.A. Firstov

*Microstructure development in the plastic deformation of two-phase stainless steel
  P. Klimanek

*Microstructure and mechanical properties of laser processed steels and cast irons
  A. Luft, E. Brenner, W. Loeschau, and W. Reitzenstein

On the combination of elementary strengthening mechanisms in a microalloyed steel
  D. Aurich and W. Oesterle

Microstructure development in high-speed hot rolling of steel rods
  M. Barthel, P. Klimanek and K.-E. Hensger

Analytical electron microscopy in research and development of microalloyed high-strength, low-alloy steels
  A. Gueth, L. Kaun, A. Koethe, and J. Richter

In situ observations of plastic deformation of Fe-Si single crystals in the SEM
  J. Proháska and Kristyák G. Maróti
Effect of microalloying on the structure of rapidly quenched Fe-Ni alloys
I.A. Rusakova, A.V. Suyazov and M.P. Usikov

On the origin of hardening in aged FeCr alloys: Relation between unmixing and mechanical properties
A. Triki, P. Bley, Y. Brechet, and F. Louchet

Microstructure changes in high-speed compression tests of metallic materials

Chapter 3: DEFORMATION OF IONIC CRYSTALS AND SEMICONDUCTORS

*Interstitial plasticity in inhomogeneous stress fields
V.N. Rozhanski

Dislocation intersection and the formation of junctions in ionic crystals of the NaCl structure
F. Appel

A TEM in situ study of dislocation glide in semi-insulating GaAs
D. Caillard, N. Clement, A. Couret, Y. Androussil, A. Lefebvre, and G. Vanderschaeve

In situ HVEM observations of the microdeformation of silicon and germanium bicrystals
A. Jacques, A. George, H.M. Michaud, X. Baillin, and J. Pelissier

Dislocation structure in LiF crystals deformed at low temperatures
H.-J. Kaufmann, S.V. Lubenets, T.V. Samoilova and B.I. Smirnov

Perfect and partial dislocations in microdeformed GaAs
H.S. Leipner, J. Schreiber and M. Surowiec

Observation of dislocation glide in sphalerite ZnS by TEM "in situ" deformation
C. Levade, J.J. Couderc, D. Caillard, and A. Couret

In-situ observation of dislocation motion in compound semiconductors by cathodoluminescence microscopy
N. Maeda, K. Maeda and Sh. Takeuchi

On the possibility of dislocation substructure evaluation by TEM in semiconductor single crystals deformed in the yield region
J.P. Michel, A. Queldennaoua, R. Allem, M. Omri, M. Azzaz, and A. George

Mechanical and structural characteristics of europium-precipitates in monocrystalline NaCl
M. Suszyńska and D. Nowak-Woźni

Generation of dislocation half loops as the initial stage of plastic deformation of In_{1-x}Ga_{x}As/InP layers
G. Wagner, G. Rohde, V. Gottschalch, and P. Paufler

Chapter 4: MICROSTRUCTURE AND MECHANICAL BEHAVIOUR OF CERAMICS

*TEM investigations of whisker toughened ceramics
G.H. Campbell, A.G. Evans and H. Ruehle
Chapter 5: HIGH TEMPERATURE DEFORMATION AND RECOVERY

*On the composite model of dislocation structure as applied to high temperature creep in metals
  A. Orlova, F. Dobeš and J. Cadek

*Investigation of recrystallization texture development by HVEM
  P.J. Wilbrandt

Lomer-Cottrell dislocations after high temperature deformation of [\{112\}] copper single crystals
  P. Anongba and J.L. Martin

Ductility improvement in copper base alloys at elevated temperatures
  M. Kanno

Retardation of intergranular creep fracture by application of high hydrostatic pressure

Chapter 6: FATIGUE

*Inhomogeneous plastic deformation in fatigued pure fcc metals
  C. Holste, K. Mecke and W. Kleinert

Dislocation structures in nickel single crystals fatigued at 78 K
  K. Mecke, W. Kleinert and M. Huebner

Chapter 7: FRACTURE

*Applications of electron microscopy to micromechanisms of brittle fracture
  P. Bowen, C.A. Hippsley and J.F. Knott

Crack initiation by shearing of kink bands
  G. Kaestner

Investigation of deformation and fracture of heterophase nickel alloys at room temperature by in situ high voltage electron microscopy
  M. Kantor, L.M. Olshanskii, I.L. Svetlov, and L.P. Sorokina

EM investigations on cracks in lithium niobate crystals
  L. Malík

HVEM investigations of microprocesses of deformation and fracture in polymers
  G. Michler

Mechanism of environmental embrittlement
  M. Hoesser
The development of fracture during unloading
I. Novikov, V. Yermishkin, V. Grebneva, and E. Samoilov

The failure of thin specimens of bcc and fcc metals and alloys
M.N. Spassky

Energetic aspects of fracture of materials undergoing a brittle-ductile transition
A.D. Vasilev

Micromechanical models for the numerical prediction of fracture resistance
B. Voss, D.-Z. Sun and W. Schmitt

Investigations on the crack tip blunting of medium strength steel
I. Wagner and M. Schroeder

In situ experiments in the SEM for crack, delamination and fracture research of materials
K. Wetzig, J. Edelmann and H. Mueller

Fracture mechanisms in dependence on loading condition and microstructure in Fe-base alloys
G. Zouhar

Chapter 8: PROPERTIES AND INTERACTION OF LATTICE DEFECTS

*HREM of the nucleation of precipitates at dislocations
P. Haasen, S.Q. Xiao and P.-J. Wilbrandt

*Temperature dependence of the stacking-fault energy and segregation of the solute atoms in Cu and Ag base alloys
H. Saka

*History and appearance forms of dislocations
D. Schulze

*High voltage/high resolution studies of metal and semiconductor interfaces
K.H. Westmacott and U. Dahmen

Microscopic investigations of laser damage in alkali halides
A.V. Gorbunov, N.V. Klassen and K. Schumann

TEM investigation of dislocation substructures and micro-twins in manganese-doped TiAl
G. Hug and P. Veyssiére

Application of stochastic geometry in TEM studies of dislocations
P. Klimanek and D. Stoyan

Characterization of the interaction between dislocations and localized obstacles by HVEM in situ straining experiments
U. Messerschmidt

Interface migration during martensitic transformation in a Cu-Zn-Al alloy
J. Stoiber and R. Gotthardt
