1 Introduction to Single Charge Tunneling  
by M. H. Devoret and H. Grabert  
1. Basic ingredients of single charge tunneling phenomena  . 1  
2. Single current biased junction  . 4  
3. Single island circuits  . 10  
4. Circuits with several islands  . 15  
5. Conclusions  . 16  
References  . 18  

2 Charge Tunneling Rates in Ultrasmall Junctions  
by G.-L. Ingold and Yu. V. Nazarov  
1. Introduction  . 21  
1.1. Ultrasmall tunnel junctions . 21  
1.2. Voltage-biased tunnel junction . 22  
1.3. Charging energy considerations . 23  
1.4. Local and global view of a single tunnel junction . 24  
2. Description of the environment . 25  
2.1. Classical charge relaxation . 25  
2.2. Quantum mechanics of an $LC$-circuit . 26  
2.3. Hamiltonian of the environment . 28  
3. Electron tunneling rates for single tunnel junctions . 30  
3.1. Tunneling Hamiltonian . 30  
3.2. Calculation of tunneling rates . 31  
3.3. Phase-phase correlation function and environmental impedance . 36  
3.4. General properties of $P(E)$ . 37  
3.5. General properties of current-voltage characteristics . 39  
3.6. Low impedance environment . 40  
3.7. High impedance environment . 41  
4. Examples of electromagnetic environments . 42  
4.1. Coupling to a single mode . 42  
4.2. Ohmic impedance . 47  
4.3. A mode with a finite quality factor . 49  
4.4. Description of transmission lines . 51  
4.5. $LC$ transmission line . 53  
4.6. $RC$ transmission line . 54
5. Tunneling rates in Josephson junctions .................................. 56
   5.1. Introduction .................................................................. 56
   5.2. Tunneling of Cooper pairs ............................................. 57
   5.3. Charge-phase duality and incoherent tunneling of the phase ..... 60
   5.4. Tunneling of quasiparticles ............................................ 61

4 Josephson Effect in Low-Capacitance Tunnel Junctions
by M. Tinkham

1. Introduction | 139 |
2. Classical Josephson junctions | 140 |
| 2.1. The RCSJ model of a Josephson junction | 140 |
| 2.2. Effect of thermal fluctuations | 141 |
| 2.3. Effect of lead impedance | 144 |
| 2.4. The phase diffusion branch | 150 |
| 2.5. Recapitulation of classical regime | 152 |
3. Quantum effects in Josephson junctions | 153 |
| 3.1. Introduction | 153 |
| 3.2. The isolated junction | 155 |
| 3.3. Estimation of the critical current | 159 |
| 3.4. Estimation of $R_o$ | 162 |
| References | 165 |

5 Coulomb-Blockade Oscillations in Semiconductor Nanostructures
by H. van Houten, C. W. J. Beenakker, and A. A. M. Staring

1. Introduction | 167 |
| 1.1. Preface | 167 |
| 1.2. Basic properties of semiconductor nanostructures | 171 |
2. Theory of Coulomb-blockade oscillations | 173 |
| 2.1. Periodicity of the oscillations | 174 |
| 2.2. Amplitude and lineshape | 178 |
3. Experiments on Coulomb-blockade oscillations | 185 |
| 3.1. Quantum dots | 185 |
| 3.2. Disordered quantum wires | 187 |
| 3.3. Relation to earlier work on disordered quantum wires | 190 |
4. Quantum Hall effect regime | 192 |
| 4.1. The Aharonov-Bohm effect in a quantum dot | 192 |
| 4.2. Coulomb blockade of the Aharonov-Bohm effect | 200 |
| 4.3. Experiments on quantum dots | 203 |
| 4.4. Experiments on disordered quantum wires | 206 |
A. Conductance of a quantum dot coupled to two electron reservoirs | 208 |
| References | 212 |

6 Macroscopic Quantum Tunneling of Charge and Co-Tunneling
by D. V. Averin and Yu. V. Nazarov 217
1. Introduction ........................................ 217
2. Inelastic q-mqt ...................................... 221
   2.1. Inelastic q-mqt in the double junction system  221
   2.2. Multijunction circuits .......................... 224
   2.3. Experimental observation of inelastic q-mqt .... 227
3. Elastic q-mqt and virtual electron diffusion ........ 230
4. Transport of electron-hole pairs in coupled arrays of small tunnel junctions 238
   4.1. General picture of electron-hole transport .... 238
   4.2. Three-junction arrays ........................... 240
   4.3. Multijunction arrays ............................ 243
5. Unsolved problems and perspectives .................. 244
References ............................................ 246

7 One-Dimensional Arrays of Small Tunnel Junctions
by P. Delsing 249
1. Introduction ........................................ 249
2. Theoretical background ............................. 250
3. Experiments ........................................ 254
   3.1. General properties, I-V curves ................ 254
   3.2. Time correlation of tunnel events ............. 258
   3.3. Space correlation of tunnel events ............. 263
   3.4. An R-SET transistor using an array as gate resistor 265
   3.5. Decoupling of the electromagnetic environment 268
4. Discussion .......................................... 269
   4.1. Self correlation ................................ 269
   4.2. Array turnstiles ................................ 271
   4.3. Coupled arrays ................................ 271
5. Conclusions ........................................ 272

8 Single Charges in 2-Dimensional Junction Arrays
by J. E. Mooij and G. SchöN 275
1. Introduction ........................................ 275
2. Charges in junction arrays ......................... 276
   2.1. Normal state ................................... 276
   2.2. Two-dimensional phase transition .............. 279
   2.3. Simulations of single electron tunneling in normal junction arrays 281
   2.4. Influence of quasiparticle tunneling on the charge KTB transition 282
   2.5. Capacitances in real junction systems ......... 283
   2.6. Charge transition in the superconducting state 285
3. Vortices in 2D junction arrays .................... 286
4. Charge-vortex duality ................................ 288
   4.1. The coupled-Coulomb-gas description ........... 289
   4.2. The phase transitions in the junction array .... 292
### 5. Quantum vortices
5.1. The vortex mass
5.2. The Aharonov-Casher effect
5.3. Forces acting on vortices
5.4. Dissipation by quasiparticle tunneling
5.5. Experimental observation of ballistic vortices

### 6. Charge dynamics
A. Arrays of normal junctions with arbitrary strength of the tunneling
B. Effect of an imposed current

### References
