CONTENTS

VOLUME TWO

COMPUTERS IN EDUCATION

ROBOTICS IN EDUCATION
Development of the Robotics Education
S. N. Dwivedi ................................. 1
Robot Positioning as a Transformation Problem
S. W. Zewari .................................. 9
Robotics in the Rensselaer Polytechnic Institute Advanced Manufacturing Lab
S. Derby ..................................... 15

INSTRUCTION IN CAD AND MECHANICAL SYSTEMS
Interactive Computer-Aided Design of Simple Spur Gear Drive Trains
R. M. Sedlacek and Y. C. Pao ................ 19
An Educational Software Package for Planar Linkage Analysis
L. J. Everett and B. W. Mooring ............. 28
Graphic Animation of Normal Mode Motions of Lumped Systems
S. C. Sinha and V. Prakash ................... 34
Instruction of Interactive Graphics and Computer-Aided Design Based on Microcomputers
C. Wei, T. Chu, M. Lee, and R. Thorsen .... 39
Computer Aided Design of Mechanisms at the University of Toledo
S. Kramer .................................... 44
Computer Aided Drafting Instruction-The Minnesota Way
D. R. Riley and F. Kelso ...................... 48

UNIVERSITY INDUSTRIAL INTERACTION IN CAD/CAM EDUCATION
Computer-Aided Engineering Design and CAD/CAM at Virginia Polytechnic Institute and State University
R. G. Mitchiner .................................. 53
Micro-Computers to Solve Textile Engineering Problems
D. K. Gupta .................................... 58
“High Tech” Education for Manufacturing Engineering Technicians: The Community College Experience
P. J. Rubino, G. J. Zanotti, and L. Brillhart 63
A Graphic Interface for the PADL-2 Solid Modeler to Facilitate CAD/CAM
J. T. Dallam, G. L. Kinzel, and M. R. Hopkins 67
NCFILE: Drafting to N/C Milling for Instruction
B. Brooks and D. R. Riley ....................... 73

MICROCOMPUTERS IN ENGINEERING EDUCATION
Structural Analysis and Design of Highly Indeterminate Mechanical Systems Utilizing Micro-Processor Technology
H. J. Farran, J. Ball, and R. McCoy .......... 78
The Use of Pocket Computer in Gas Dynamics
A. Aziz and D. Anderson ..................... 86
Guidelines for User Friendly Software
D. C. Ullman .................................. 94
Integrating Computer-Aided Design Concepts to the Mechanical and Aerospace Engineering Curriculum at West Virginia University
K. K. Tamma ................................. 98
### COMPUTER- AIDED LEARNING SYSTEMS

Using Computer Techniques as an Aid in Teaching Machine Analysis

J. E. Beard, B. J. Gilmore, and R. J. Cipra ........................................ 131

Voiceprint Display of Audio Signals in Real Time With Minimum Hardware

P. H. Kosel .......................................................... 136

Development of Interactive Graphics Software in an Educational Environment

J. L. Frater and M. J. Valco ............................................. 140

Development of Educational Software Using Student Project Courses

J. L. Frater and M. J. Valco ............................................. 145

Starting from Scratch - Computer Aided Engineering in a Mechanical Engineering Curriculum

T. V. Baughn and D. B. Johnson ........................................... 150

User-Friendly Interactive Computer-Aided Design of Four-Bar Based Linkages

P. V. Whalen and A. Midha ..................................................... 154

Use of Microcomputers in Teaching Design of Machine Elements

Y. Hari and S. N. Dwivedi ....................................................... 162

### COMPUTER APPLICATIONS

### COMPUTERS IN ENERGY SYSTEMS

Kalman-Filter Application to “On-Line” State Estimation and Control of Turbine Start-up Procedure

J. Z. Sasiadek ................................................................. 172

Computer Simulation of Woodstove Thermal Mass Storage System

Y. H. Zurigat and A. J. Ghajar ............................................. 175

A Computer Simulation of the Turbine Flow Meter Rotor as a Drag Body

M. B. Pate, A. Myklebust, and J. H. Cole .................................. 184

A Computerized System for Shipboard Energy Management

A. G. Hansen, S. Basu, and N. Santelli .................................... 192

Dynamic Simulation of Solar/Fossil Hybrid Steam Generators for a Refinery

R. Raghavan, G. D. Gupta, and J. Apice .................................. 200

Computer-Aided Design of Condensers

K. W. Li ................................................................. 204

Computer Aided Solutions for the Oil Producing Industry

T. H. Nicol and J. C. Purcupile ........................................... 209

Computer Solution of Reacting Flowfields

D. G. Lilley ................................................................. 216

Computer Applications to Combustion Research

A. K. Gupta and M. diMarzo ................................................ 224

Swirler Performance and Confined Swirling Flow Predictions

M. T. Abujalala and D. G. Lilley ........................................... 233

Control Volume Based Finite Difference Formulation for Heat Conduction and Simple Fluid Flow Problems

H. T. Jakobsson and A. J. Ghajar ........................................... 242
APPLICATIONS OF MICROCOMPUTERS IN MANUFACTURING

Optimal Performance Characteristics for Parallel Stations in Automatic Assembly Systems
J. L. Sanders and W. K. Leung ............................................ 247

Interpolating Rational Parametric Curves
J. N. Jortner and J. A. Brewer, III ..................................... 253

Microcomputer Utilization in Mechanical Vibration Analysis
Y. Hari and S. N. Dwivedi ............................................... 259

Shape Optimization of Assemblies Using Geometric Properties
K. Lee and D. C. Gossard .............................................. 269

Optimal Synthesis of Oscillating Roller-Follower CAM Mechanisms With Prescribed Functional Constraints
J. Angeles and C. Lopez-Cajun ...................................... 273

Optimum Design of Gathering Assembly for the Self-Loading Trailer by Nonlinear Programming
J. Kowalski and F. Wozniak ......................................... 278

APPLIED COMPUTER METHODS IN BALLISTICS

Finite Element Modelling of Blunt Projectile Response to Target Impact
J. C. Schulz, O. E. R. Heimdahl, and S. A. Finnegan .................. 279

Pebble Impact on Layered Targets at High Obliquity
Y. Kivity and S. L. Hancock ........................................ 287

Lagrangian Computations for Projectile Penetration into Thick Plates
F. P. Stecher and G. R. Johnson ..................................... 292

Structural Analysis of a Mine With Two Viscoelastic Explosive Fills
A. D. Gupta ............................................................... 300

Numerical Techniques for Applications in Internal, Intermediate and Terminal Ballistics
R. T. Sedgwick .......................................................... 315

Energy Release Rate for Crack Branching
M. A. Hussain ............................................................ 324

Three Dimensional Computer Representation and Simulation of Blast Wave Loading
G. Bulmash ............................................................... 327

CAD/CAM/CAE SYSTEMS

COMPUTER-AIDED MANUFACTURING

The Optimal Use of Resources in the Introduction of a CAM System
W. K. Bolton and M. E. Duncan ...................................... 333

Computerized Sensitivity Analysis of Milling Operation Through Geometric Programming
N. K. Jha ................................................................. 340

Flexible Manufacturing Systems Worldwide: Advantages, Problems, Opportunities
E. J. Phillips ............................................................. 346

A Cell Control System for the AMRF
A. T. Jones and C. R. McLean ...................................... 353

A Vision Based Technique for Automatic Tool Set-Up, Identification, and Wear Measurement in CNC Lathe
F. Maali, L. Daneshmend, C. B. Besant, and H. A. Pak ................. 360

A Microprocessor Based Adaptive Control for Machine Tools Based on the Random Function Excursion Technique
S. ChandraSekhar, J. Frazao, M. O. M. Osman and T. S. Sankar ........ 367

Microcomputer/Microstep Control for Machine Automation
D. V. Hutton .......................................................... 374

Factory Automation and Simulation Applications
T. P. Sovers ............................................................. 376
Forecasting Compensatory Control (F.C.C.) of Roundness in Boring
K. A. Huang and S. M. Wu .................................................. 378

Computer-Aided Rotor Balancing of Large Turbine Generators, in the Balancing Pit and on Site
R. Bigret ........................................................................ 384

Computer Aided Manufacture of Streamlined Extrusion Dies
J. S. Gunasekera and J. Jayasuriya ........................................ 393

Automated Vibration Based Tool Wear Monitoring: Application to Face Milling
G. Shteinhauz, S. Braun, and E. Lenz ..................................... 401

COMPUTER-AIDED DESIGN AND ANALYSIS
An Interactive Approach to the Design and Analysis of Three Dimensional Transmission Shafts
T. M. Walliser, V. Flinner, and G. L. Kinzel .............................. 407

An Interactive Approach to the Design and Analysis of Commonly Used Flywheels
P. Zivkov and G. L. Kinzel ..................................................... 415

Applying Bezier Curves in a Computer Graphic Approach to Specifying the Motion Curves of CAM-Follower Systems
S. W. Marek and G. L. Kinzel .................................................. 424

CAD and FE — Integration of Design and Development
H. Peeken and C. Lenssen ...................................................... 430

Computer-Aided Fatigue Design—A Review
F. L. Knight ........................................................................ 431

An Efficient Selection Routine for Cases in Interactive Design Programs: Illustrated on a Spring Design Program
W. B. Shook, Jr. and G. L. Kinzel ............................................. 442

A Comprehensive Analysis Procedure for V-Belt Systems
J. -H. Shin and G. L. Kinzel .................................................... 448

Computer Aided Design and Drafting System for Process Industry
H. Bhaumik ........................................................................ 456

CAD/CAM INTEGRATION
An Artificial Intelligence Approach to Integrating CAD and CAM Through Generative Process Planning

Implementing CAD/CAM at Technical University of Nova Scotia
J. W. Graham and A. A. Mufti .................................................. 464

Computer Integrated Manufacturing — Where to Begin
J. L. Pittenger and D. Hatch ................................................... 471

The Meaning of CAD/CAM for a Higher Productivity in the Electrical Industry
O. Abel.............................................................................. 477

Advances in Steam Turbine-Generator Design and Manufacture Using Computer Technology
D. R. Searle, J. M. Kniskern, and F. E. King .............................. 485

COMPUTER-AIDED ENGINEERING
Calculating Belt Length for More Than Two Sheaves
W. C. Orthwein .................................................................. 490

Computer-Aided Industrial Pump Selection for Constant and Variable Speed Pumping Conditions
T. Y. W. Chen ..................................................................... 495

High-Speed and High-Quality Wire Matrix Kanji Print Head
K. Okuna, K. Takahashi, and I. Nakajima ................................. 504

Helical Spring Optimum Design by Nonlinear Mixed-Discrete Programming
J. Yun ................................................................................ 510

Computer-Aided Modeling of Hot and Cold Rolling of Flat Strip
A. S. Halal and B. Kaftanoglu ............................................... 517
Finite Element for Lug Attachment to Process Piping
R. C. Madan and Y. Hari ........................................ 525
Computer-Aided Data Acquisition During Controlled-Strain-Rate Upsetting Test and Analysis for Metal-Forming Applications
D. R. Barker, S. M. Doraivelu, H. L. Gegel, and Y. V. R. K. Prasad ........................................ 532
Applications of Computers in Metalworking Industries
S. N. Dwivedi ....................................................... 537
COSMIC and COSMIC/NASTRAN
J. A. Gibson and R. L. Brugh .................................. 547
Finite Element Method Applied to Transient One-Dimensional Heat Conduction With Radiation at Boundary Surface
R. H. Kim ......................................................... 551
Generic Modeling and Design Sensitivity — Advanced Tools for CAD Process
S. N. Dwivedi and B. Prasad ..................................... 556
Computers in the Factories of the Future
S. N. Dwivedi and J. P. Sharma ................................ 564

COMPUTER-AIDED TESTING
Computer-Aided Test, Simulation, and Control of a Coal Gasification Pilot Plant
S. H. Azzaro, K. J. Daniel, and D. P. Smith ......................... 570
Stochastic Formulation for Time Domain Vibration Testing Technique
S. A. Zaghlool .................................................. 576

COMPUTER SIMULATION AND CONTROL

COMPUTER SIMULATION OF VEHICLE DYNAMICS
The FRESH Handling Simulation: Development and Application
D. L. Wilson and B. I. Bachrach ................................ 586
Modeling and Simulation of a Tracked Vehicle
M. R. Garnich and T. R. Grimm ................................ 591
Computer Simulation of the Fuel Consumption on an Urban Cycle of a Vehicle Equipped With a Hydrostatic Transmission
R. Labonville, H. Yelle, and M. Gou ................................ 601
Dynamic Analysis of a Leaning, Human-Powered Tricycle
S. B. Lambert and R. J. Anderson ................................. 608

COMPUTER SIMULATION OF VEHICLE SUBSYSTEMS AND COMPONENTS
ROLLUBE: A Computer Package for Modeling Roller Bearing Lubrication and Elasticity
M. M. Kostreva and M. B. Hatton ................................ 614
A Computer Program for Determining the Efficiency of a Rockwell Tandem Driving Axle
J. C. Wambold and B. L. Jenks ................................ 621
Aero-Thermodynamic Computer Aided Design Procedure for Radial Flow Impellers
S. N. M. Jawad and F. S. Bhinder ................................ 626
Dynamic Modeling and Simulation of a Hydraulic Variable Timing Device for Diesel Engines
D. E. Beeson ....................................................... 634
Analysis of Friction, Leakage, and Heat Transfer in Vane Expanders
G. F. Robertson and C. H. Wolgemuth .......................... 639
A Thermo/Mechanical Model for a Pneumatic Pump Driven by Engine Exhaust Pressure Pulses
D. J. Pozniak and G. F. Robertson ................................. 648

COMPUTER SIMULATION OF DYNAMICAL SYSTEMS
A Computer Driven Feedback Control System for Simulation of the Cardiovascular Network
J. C. Levey, Jr. and D. N. Bingham ................................. 658
Displacement Analysis of Planar Stephenson Mechanism
S. N. M Jawad .................................................. 664
Control of Circuit Board Dynamics With Computer Simulation
B. Ratihn .......................................................... 670
Simulation Studies of a Vibration Damper for Wind-Induced Motion of a Tall Building
J. R. Amyot, R. L. Wardlaw and K. R. Cooper ......................... 673
Transportation of Irradiated Fuel by Tractor-Trailer: A Simulation of the Vibration Environment
M. A. Elbestawi and D. F. Lau .................................. 682
Development of a Computer Model for Calculating Torque on a Shaft Having a Number of CAMS and Followers
C. S. Newman .................................................. 688

PROCESS CONTROL
Microprocessor Control of a Mechanical Pulp Refiner
M. H. Zand and S. M. Wu ...................................... 696
Computer Control of a Hydrostatic Pump
Y. Xu, Z-S. Cheng, F. J. Fronczak, and N. H. Beachley ............... 703
Design of Narrow Band-pass Digital Filters for Transient Response
C. J. Radcliffe .................................................. 709

SIMULATION TECHNIQUES
An Efficient Algorithm for the Simulation of Nonlinear Vehicle Subsystems
M. van Vliet, S. Rakheja, and S. Sankar ................................ 715
Implementation of Multi-Body Dynamic Analysis on a Small Computer
R. J. Anderson .................................................. 721
A Three-Dimensional Mesh Generation Technique
P. K. Goenka and K. P. Oh ...................................... 727
An Approach to the Computer Aided Design of Planar Mechanical Systems Using Bond Graphs
R. C. Rosenberg and J. D. Reid .................................. 736

COMPUTER SIMULATION IN MANUFACTURING
Modelling and Simulation of Automatic Tool Management and Delivery in Flexible Machining Systems
H. A. ElMaraghy and D. S. M. Ho .................................. 742
Dynamic Simulation as a Decision Support Tool in a Gas Turbine Engine Repair Facility
V. S. Webb ..................................................... 746
DRIVE: An Interactive Program for Simulating Driveline Dynamics
K. P. Oh ...................................................... 754
A Modular Computer Program for Simulating Internal Combustion Engines
J. P. Craddock, M. Hussain, and F. S. Bhinder ......................... 761
A Realization of a Signal Synthesis Adaptive Control Strategy
W. P. Mounfield and R. G. Leonard ................................ 767
Determination of Residual Stresses in a Ring Due to Machining
R. Natarajan, S. Biswas, and S. Jeelani .................................. 773

List of Papers Presented Orally but Not Appearing in This Volume ..................... 779
