Human Aspects in Computing

Design and Use of Interactive Systems and Work with Terminals

Proceedings of the Fourth International Conference on Human-Computer Interaction, Stuttgart, F.R. Germany, September 1–6, 1991, Volume 1

Edited by

Hans-Jörg Bullinger
Fraunhofer-Institut für Arbeitswirtschaft und Organisation, (FhG-IAO), Stuttgart, F.R. Germany

and

Institut für Arbeitswissenschaft und Technologiamanagement (IAT),
University of Stuttgart, Stuttgart, F.R. Germany

Input Ergonomics
Screen keyboards: an empirical study of the effects of shape and character layout
L. M. Leventhal, J. W. McKeeky and B. T. Mynatt ................................................................. 108
Is feedback necessary when using a keyboard?
U. Guggenbuehl and H. Krueger ................................................................................................... 113
Location of isometric joystick for optimal performance in typical computer task mix
D. H. Straayer .................................................................................................................................. 118
An experimental evaluation of mouse, joystick, joycard, lightpen, trackball and touchscreen
for pointing - basic study on human interface design
A. Murata ......................................................................................................................................... 123

WORK PLACE AND WORK ENVIRONMENT ................................................................. 129

Design of Office Rooms and Buildings
From inside to outside - Worker-orientated planning of economically efficient and future-
orientated office buildings
P. Kern and D. Lorenz .................................................................................................................... 131
Office layout: new aspects of concentration and communication at work
B. Schlintner ...................................................................................................................................... 136
The combi office concept
W. Fuchs ........................................................................................................................................ 141
Planning the future office - focus on work environment
L. B. Kofoed and K. Vogt .................................................................................................................. 148

Design of Environmental Sectors
Office lighting of the 90's
T. Braun ........................................................................................................................................ 154
Acoustic in modern office buildings
F. Hofmann ....................................................................................................................................... 157
Climate problems in areas with high VDU density: results of traders desks
W. Bauer ........................................................................................................................................ 162
The impact of the office environment on workers health
A. E. Çakir ........................................................................................................................................ 167

HEALTH ASPECTS: WORKLOAD,
STRESS AND STRAIN AND IRREGULAR WORKING HOURS ......................... 173

Causes and Measures of Stress
Frictions and frustrations in creative-informatory work with computer aided design - CAD
systems
H. Luczak, W. Beitz, J. Springer and T. Langner ........................................................................... 175
Engineers' workload due to high speed and high function machine: is the work density
increasing?
Y. Fujigaki ....................................................................................................................................... 180
Breakdowns and other interruptions in VDT work as a source of stress in customer service
and banking
K. Lindström ................................................................................................................................... 185
Evaluation of mental workload in location task by HRV measures - relation between work
level and mental workload
A. Murata ......................................................................................................................................... 190
Task-oriented dialogue management based on different knowledge sources  
*C. Stary* .................................................................................................................275

New algorithms for interactive object oriented graphics  
*B. Arndt and K.-H. Hanne* ....................................................................................281

A logic based programming environment for interactive applications  
*H. Jasper* ..............................................................................................................287

**Application Experiences with UIMS**  
User interface management systems UIMS for interactive applications - experiences using ISA dialogue manager  
*G. B. Bertram* ......................................................................................................292

Approach to a dialogue manager for medical information systems  
*B. Thull, M. Langen, T. Schecke and G. Rau* .........................................................298

Revolutionary vs. evolutionary rapid prototyping: balancing software productivity and HCI design concerns  
*S. P. Overmyer* .....................................................................................................303

Graphical user interfaces: Metaphors we compute by  
*J.-M. Chauvet* .....................................................................................................308

**HYPERTEXT AND HYPERMEDIA** .................................................................315

**Hypertext**  
New potentiality of hypertext systems in information retrieval operations  
*M. Agosti* ..............................................................................................................317

Mental spaces of hypertext links: an empirical investigation  
*H. Pfeiffer and E. Eberleh* ....................................................................................322

Attempts to draw nice graphs by an interactive hypertext browser  
*M. Hofmann, H. Langendörfer, K. Laue and E. Lübben* ........................................327

Hypertext interface to technical terminology  
*A. van Hoof and R. Mayer* ...................................................................................332

**Hypermedia**  
Media composition and synchronization aspects in an interactive multimedia authoring environment  
*G. Pancaccini and F. Stajano* ..............................................................................337

Virtual structures in hypermedia resources  
*P. A. M. Kommers* ................................................................................................(Supplement) 1343

The motion picture in interactive information systems: a necessary or facilitating component?  
*J. Faber, T. Meiers, D. Ruschin and A. Seyferth* ..................................................344

A hypermedia information system to manage the activities in a research institute  
*M. Allegra, O. di Giuseppe and S. Mangiaracina* ..................................................350

**DISTRIBUTED INFORMATION SYSTEMS** ..................................................357

**Design and Management of Distributed Systems**  
Application design using the Comandos distributed object oriented system  
*D. Decouchant, V. Normand and G. Vandôme* .....................................................359

How intelligent, integrated system access enhances use task performance, productivity, and satisfaction  
*P. Reed* ..................................................................................................................364

Dialogue design for speech interfaces in the office context
J. Monaghan, Chr. Cheepen and J. Hewitt ................................................................. 473

Outline of a comprehensive assessment methodology for speech-oriented applications
P. H. Vossen ............................................................................................................... 478

Research Issues of Speech Input
Consequences of discrete speech using speech-to-text technology
P. Day, A. Grünupp and K.-P. Muthig ..................................................................... 485
Facial expression graphics feedback for improving the smoothness of human speech input to computers
T. Watanabe and A. Higuchi ..................................................................................... 491
The recognition coefficient: methodological and statistical issues concerning measurement of speech recognition accuracy
P. H. Vossen ............................................................................................................... 498

Speech in Multimodal Applications
Software for multi-modal HCI including speech for skilled industrial workers
B. Scherff .................................................................................................................. 506
SESAM: a prototype multimedia system combining computer animation with speech dialogue
M. Niemöller, A. Aktas, U. Harke, U. Leiner and K. Zünkler ...................................... 512
Speech and other modalities in the office environment: some research results
F. L. van Nes .............................................................................................................. 517
An evaluation of speech operated word processing - a task based approach
M. Zajicek and J. Hewitt ......................................................................................... 525

STANDARDISATION ................................................................................................. 531

Development of Standards
Standards relevant to European directives for display terminals
N. Bevan .................................................................................................................. 533
Standards as a means of influencing interface design
T. Stewart ................................................................................................................ 538
Developing recommendations for CAD user interfaces
A. M. Heinecke .......................................................................................................... 543

SOFTWARE ENGINEERING - METHODS, TECHNIQUES AND TOOLS 549

Software Engineering and HCI
Software engineering = human factors engineering?
P. Gorny ..................................................................................................................... 551
Dialogical software design
J. Pasch .................................................................................................................... 556
Control vs. creativity: software engineering at a crossroads
G. Bradley ................................................................................................................. 561
Design and experimental evaluation of a new graphical multi-process debugger
S. Maleknasri and J. D. Foley ................................................................................... 566

New and Better Techniques for Software Engineering
The development of human-computer interface descriptions from organisational models
J. S. Medes ............................................................................................................... 572
Structured design of user-interfaces and knowledge-based design
A. Viereck, E. Schlungbaum and P. Gorny .............................................................. 577
The use of co-operation models for specification and design of user interfaces
R. Krickhahn, M.-J. Schachter-Radig and K. Streng ........................................582

Applications of Techniques and Tools
Visual programming with reusable specifications described by a conceptual data model- and
constraint-based language
K. Okamoto and M. Hashimoto .................................................................587
Selective information hiding: a debugging technique to address some of the problems of
novice programmers
R. Waddington and R. Henry .................................................................592
Assessing usability evaluation methods in a software development process
N. Kishi and Y. Kinoe .................................................................597
Automatic testing for the applications with direct manipulation interfaces
G. Lu ........................................................................................................602

USABILITY EVALUATION .................................................................607

Practical experience of Usability Evaluation
Applying formal verbal protocol analysis to practical usability evaluation
Y. Kinoe ...................................................................................................609
Procedures to evaluate the usability of software products
G. Zülich and J. Englisch..................................................................614
User interfaces for public information systems
D. Felix, W. Graf and H. Krueger .........................................................621
A human factors model for evaluating advanced telesience system throughput
R. F. Haines ............................................................................................625

Techniques for Usability Evaluation
An integrated design and evaluation tool for dialogue systems in vehicles
G. Nirschl ................................................................................................630
User interface design and evaluation - application of the rapid prototyping system EMSIG
A. Kaster ................................................................................................635
Comparison of interaction techniques
H. Widdel and J. Kaster ........................................................................640
Analysis and evaluation of cognitive tasks using an information transition model
K. Itoh and T. Enkawa ........................................................................646

Development of Usability Metrics
What is usability?
N. Bevan, J. Kirakowski and J. Maissel ..................................................651
Indicators of usability based on performance
R. Rengger ............................................................................................656
The value of psychophysiological measures in human-computer interaction
M. Wiethoff, A. G. Arnold and E. M. Houwing ..................................661
Predictive metrics for usability
D. Gunsthoevel and T. Boessser ..........................................................666

INTERFACE DESIGN ........................................................................671

User Interface Design Methodology
A usability engineering approach to the development of graphical user interfaces
R. Gimnich, K. Kunkel and L. Reichert ..................................................673
XIT - A multi-layered tool for user interface design
J. Herczeg, H. Hohl and T. Schwab .......................................................... 678

U-face: a user interface design system based on multiview model
T. Kanba and O. Hashimoto ................................................................. 684

Action facilitation - a non-formal approach to the design of usable systems
A. G. Arnold and B. Zwep ................................................................. 689

Interface Design Examples
A reasoning-level user interface for spatial layout planning problems
P. Banerjee, C. L. Moodie and R. L. Kashyap ...................................... 694

Computing access in public spaces: design lessons learned
R. S. Heller .......................................................... 699

Criteria for designing user interface of CIMple, a toolbox for CIM consultants, planners and vendors
N. Banerjee .......................................................... 704

Ethnographic workflow analysis: specifications for design
D. Fafchamps .......................................................... 709

Advances in Interface Design
Gestures in multimodal human-computer interaction
K.-H. Hanne .......................................................... 716

Conceptual models in the design process of direct manipulation user interfaces
T. Kühme, G. Hornung and P. Witschital ............................................ 722

An experimental study of the granularity and range of the undo function in user interfaces
S. Lenman and J.-M. Robert .......................................................... 728

Integrating usability evaluation with systems design
J. Hammond and B. McManus .......................................................... 733

COMPUTERIZED WORK AND
THE IMPROVEMENT OF WORKING CONDITIONS .................................. 739

Flexible Shop Floor Operations and Office Automation
Task and user adequate design of human-computer interfaces in production – the CNC programming example
K.-P. Fähnrich, M. Thines and C. Raether ........................................... 741

Design of an adaptable/adaptive user interface management system in production
S. Zimel .......................................................... 748

Iconic interface for interactive fiction retrieval in libraries based on a cognitive task analysis
A. M. Peijersen and F. Nielsen .................................................. 753

Workshop: Improvement of Working Conditions for Computerized Work: Where are we and where will we go?
The design of computerized work according to human needs - R&D-promotion of software design in the work and technology programme
C. Skarpelis and H. Thunecke .................................................. 763

Competence, learning and roles in the workshop
B. Edgren .......................................................... 769

Error management or error prevention: two strategies to deal with errors in software design
M. Frese .......................................................... 776

New approaches in software engineering for interactive systems
A. Beck and J. Ziegler .......................................................... 783
