第二屆亞洲流體力學會議論文集

PROCEEDINGS OF THE SECOND ASIAN CONGRESS OF FLUID MECHANICS

25–29 October, 1983, Beijing, China
CONTENTS

INVITED PAPERS

Galaxies, Turbulence, and Plasmas
   C.C. Lin .................................................. 1
Sedimentation: A Review of Developments in a Classical Problem
   G.K. Batchelor ............................................. 5
Cognition and Description of Patterns in Turbulent Flows
   Hiroshi Sato .............................................. 7
Laminar-Turbulent Transition: The Intermittency Revisited
   R. Narasimha ............................................. 13
Observations on Transition of the Unsteady Pipe Flow
   A.K.M.F. Hussain ........................................... 14
Fluid Mechanics Serving Hydraulic Engineering in China
   Lin Bingnan ............................................... 16

TURBULENCE

Wall Pressure Fluctuation and Turbulence Structure of a Boundary Layer
   Y. Kobashi, M. Ichijo and M. Hayakawa .............................................. 24
Nonisotropic Vortex and Uniform Turbulence
   Qi Shutang and Wu Feng ............................................. 29
On Compatibility of the Basic Hypotheses and the Expansions of Second-Order
   Moments in the Theory of Turbulence
   Ye Jingtang ................................................. 35
Simplifications of the Triade Integral in Isotropic Turbulence
   L. Crocco and P. Orlandi ......................................... 41
The Relation between the Markov Process Theory and the Kolmogoroff's Theory of
   Turbulence and the Extension of the Kolmogoroff's Laws
   Yue Zengyuan and Zhang Bin ........................................... 51
Energy Spectrum in the Equilibrium Range of Homogeneous and Isotropic Turbulence
   Zhou Zuwei .................................................. 54
Numerical Approach to the Characteristic Functional of Turbulent Fields
   Iwao Hosokawa and Kiyoshi Yamamoto ........................................... 60
Numerical Study of a Reacting Turbulent Grid Flow
   Edward E. O'Brien and Tong-Ho Hsieh ........................................... 63
The Large Scale Structure of the Turbulent Boundary Layer
   Sinzi Kuwabara ............................................... 66
Observations on Structures of Turbulent Boundary Layer in a Flow with Strong Adverse Pressure Gradient
   Lian Qixiang ................................................ 70
Modeling of Turbulent Flows in Hydraulic Systems
S. Y. Wang ................................................................. 78

Characteristics of Fine-Scale Turbulence in Boundary Layers
K.R. Sreenivasan .............................................................. 84

Experiments on Stably Stratified Homogeneous Turbulence and the Interpretation of
Ocean Microstructure Measurements
C.W. Van Atta ............................................................... 91

A Stochastic Model of Intermittently Turbulent Phenomena
Michio Ohji, Hideki Nabeshima and A. Hiruta ........................................ 95

Generation of High Intensity Turbulence and Control of Its Structure in
a Low Speed Wind Tunnel
Hidehara Makita and Shinji Miyamoto ........................................... 101

Simultaneous Eulerian and Lagrangian Measurements of Turbulence in a Submerged
Jet for Water and Dilute Polymer Solution
Tan Hung and Neil S. Berman .................................................. 107

An Advanced Simplified Laser Time of Flight Velocimeter System
Yue Yao and E.D. Hirleman .................................................. 112

Experimental Study of the Development Processes of Taylor-Gortler Vortex (Power
Spectrum Analysis of Rotating Water between Inner Cylinder
Rotating and Outer Cylinder at Rest)
Akira Ogawa, Yoshihiko Fujita, Hisao Nagabayashi and Yukihiro Kawamoto ........................................... 117

Large Coherent Structures in Two-Dimensional Mixing Layers
Wei Zhonglei, Niu Zhennan and Ma Wenju .................................... 123

Entrainment in Coherent Structures
R. Chevray and S.V. Sherikar .................................................. 129

Encroachment: An Extension of the Entrainment Concept to Handle a Class of Shear
Flows with Disturbed Turbulence Structure
Venkatesa I. Vasantha Ram, Verena Schulz and Siegfried Kiske ........................................... 138

Study of Pressure Fluctuation beneath Hydraulic Jump by means of Statistical
Theory of Turbulent Flow
Wang Mulan, Hu Minglong, Xia Baolian and Shang Shuanglin ........................................... 148

Measurement of Pressure Fluctuations in a Compound Turbulent Jet
Kuniaki Toyoda and Yoshikuni Shirahama .................................. 155

FLOW STABILITY

On the Resonant Triad for the Plane Poiseuille Flow in the Subcritical Range
Zhou Heng ................................................................. 161

On Stability of Certain Magnetohydrodynamic Flows
A S Gupta ................................................................. 169

Investigation of Nonlinear Transition Mechanisms in Boundary-Layer Flows by
Numerical Solution of the Navier-Stokes Equations
H. Fasel ................................................................. 170

Weakly Nonlinear Interaction of Random Waves in Parallel Shear Flows
Zhang Zhaoshun ............................................................. 176
Interaction of Detonation Wave Front and Deflagration Wave Front with Small Disturbances (Problem of Stability of Detonation and Deflagration Wave Fronts)

Xu Fu ................................................................. 182

Critical Reynolds Numbers for the Flow in Flexible Tubes

Mieko Arakawa and Yaso’o Matunobu ........................................ 186

A New Approach to the Stability of Parallel Flows

Li Jiachun and Zhao Dagang .................................................. 192

Excitation of Unstable Waves in Supersonic Boundary Layer by Sound

Sergei Gaponov .................................................................. 198

On the Nonlinear Stability of the Ekman Layer on a Porous Plate

B.S. Dandapat .................................................................... 202

Topographic Instability in a Weakly Nonlinear Rossby Wave System

Yoshinori Inoue .................................................................. 208

TRANSONIC FLOW

Subsonic and Transonic Flow Field in Two-Dimensional Laval Nozzles

Pu Qun and Lin Tongji .......................................................... 213

A New Concept in Supercritical Airfoil Design

M. Nandanan and M.A. Ramaswamy ....................................... 219

Potential Equation for Transonic Steady Flow with Large Longitudinal Disturbance and Line Relaxation

Luo Shijun ..................................................................... 225

Numerical Solutions of Two-Dimensional Transonic Flows by Second Order Approximation Method

Shen Keyang and Luo Shijun .................................................. 233

Transonic Full Potential Solutions by a Panel Method

K.S. Ravichandran, N.L. Arora and R. Singh ......................... 240

Calculation of Subsonic and Transonic Flow about a Sphere or a Circular Cylinder

Liu Qiusheng and Lin Tongji .................................................. 246

Numerical Analysis for Aeroelastic Stability of Transonic Cascades

Lin Baozhen, Tang Zhiming and Zhou Sheng ......................... 252

A Time Marching Finite Area Streamline Iteration Method and Its Application to Transonic Flow around Plane Cascade

Shen Mengyu and Chen Xidi ................................................ 258

On the Numerical Treatment of the Entry Boundary Conditions in Transonic Flow through Plane Cascade

Zhang Yaoke and Shen Mengyu ............................................. 265

An Experimental Result of Partially Modified Shockless Airfoil

Masayoshi Nakamura .......................................................... 271

On Implementation of Boundary Condition in Axisymmetric Transonic Small Perturbation Equation

U.N. Sinha and V.R. Sarasamma ........................................... 277

Adaptive-Wall Wind Tunnels

Sanford Davis, Edward Schairer and Satyanarayana Bodapati ...... 283
BOUNDARY LAYER AND SHOCK WAVE

Turbulent Boundary Layers Perturbed by Embedded Bodies
  *Kirit S. Yajnik* ................................................................. 290

On the Mechanism of Drag Reduction in a Turbulent Boundary Layer Using a Thin Plate
  *S. Takagi* ............................................................................ 292

The Unsteady Boundary Layer over a Semi-Infinite Flat Plate Caused by
  a Shock Advanced in a Moving Gas
  *S.F. Shen and Chen Yunming* .................................................. 295

On the Propagation of a Shock Wave near a High Temperature Singularity of
  Strong Planar Explosion
  *Huang Dun and Rong Sheng* .................................................... 302

Thick Boundary Layer Effects in Curved Ducts
  *A. Prabhu and B.N.S. Rao* .................................................... 309

Three Layer Theory of a Turbulent Boundary Layer on a Flat Plate
  *Noor Afzal* .......................................................................... 316

A Test of the Independence Principle in Swept Cylindrical Shock
  Wave/Turbulent Boundary Layer Interactions
  *Gary S. Settles and Teng Hsueh-Ying* ...................................... 322

Bow Waves in a Supersonic Flow past a Delta Wing of a Finite Thickness with
  Subsonic Leading Edges
  *Tetsuya Fujimoto and Syozo Kubo* ......................................... 328

The Pressure Calculation of a Shock Wave Diffraction around
  an Arbitrary 3-Dimensional Body
  *Chen Yaosong and Zou Guangyuan* ....................................... 335

The Evolution of the Korteweg-De Vries-Burgers Shock Structure
  *Lin Yi* .................................................................................. 342

AERODYNAMICS

Unified Supersonic/Hypersonic Theory of Unsteady Flow past Oscillating Airfoils
  *W.H. Hui* ............................................................................ 348

Wind Loadings on Hemi-Spherical Shell
  *Ju Xingyan, Chen Weiyan, Gu Zhifu and Sun Tianfeng* ............. 355

Power Augmentation in Savonius-Type Wind Rotors Using Diffusers
  *S. Sivasegaram* ..................................................................... 361

Hypersonic Merged Layer on a Blunt Body
  *A.C. Jain and Saroj Prabha* ................................................... 367

On Compressible Swirling Nozzle Flow
  *M. Yasuhara, K. Tsuboi, S. Maruyama, H. Okamoto and J.Z. Zhang* 374

Experimental Investigation on the Characteristics of the Side Force and Flow
  Phenomena of a Sharp-Nosed Slender Body of Revolution at
  High Angles of Attack
  *Wang Zhenyu, Chen Nanqian and Zhao Shicheng* ....................... 380
Experimental Investigation on the Aerodynamic Characteristics of Pointed Slender Bodies of Revolution at High Angles of Attack and Zero Sideslip

Yu Xinzhi, Wu Ze and Wang Daxuan .............................................................. 386

Low Speed Aerodynamic Investigation of Forward Swept Wing

Zhang Lizhuang, Wang Xuejian, Guo Yuebin and Zhang Binjiang ............ 392

Transition Effects on Stability of a Slender Cone

Lou Hongtian .......................................................... 398

Thermal Performance of a Gas-Loaded Heat Pipe

K. N. Shukla .......................................................... 405

Thermo- and Fluid Dynamics of Heat Pipes

Koichi Oshima and Masahide Murakami .............................................. 411

The Computations of Three-Dimensional Supersonic and Two-Dimensional Subsonic Transonic Flows with Equations of Gasdynamics in Stream Surfaces(Lines) Coordinates

Wang Baoyu, Zhang Qinan and Chen Yu .............................................. 416

End Wall Flows in Aerofoil Cascades

K. Majka and S. Soundranayagam ...................................................... 422

Unsteady Free Convection Induced by the Rotationally Symmetric Motion of a Vertical Plane

S.S. Chawla .......................................................... 429

Measurements Related to Afterbody Studies on Thrust-Minus-Drag Rig

Sachidananda Kangovi and V. Krishnan .............................................. 432

WATER WAVES

Dam-Break Waves in Prismatic Channels

Lu Jikang, Lin Bingnan and Gong Zhenying ........................................ 440

Waves in a Stratified Fluid (A Coupled System of K-deV Equations)

C.H. Su .............................................................. 446

Wave Attenuation on Rippled Beds

Suphat Vongvisessomjai and Philipupillai Christy Manoharan .................. 453

Wave Generation of a Slowly Moving Body

T. Francis Ogilvie and Chen Sixiong ............................................... 460

The Two-Dimensional Steady Internal Wave Field Produced by a Cylinder Moving Vertically through a Density-Stratified Liquid

Ulrich Gärtnert, Wolfgang Merzkirch and Zhang Dieli ............................ 464

Interfacial Solitary Waves in a Two-Fluid System

Dai Shiqiang .......................................................... 468

Fission of Solitary Waves in a Channel

Zhou Xianchu .......................................................... 475

Computation of Wave-Diffraction around Arbitrary Offshore Structures

Subrata Bose, A.N. Biswas and B.N. Chanda ..................................... 482

Application of Differential Perturbation to Wave Hydrodynamics

Hiroyoshi Shi-igai and Toshitatsu Kyoto .......................................... 487
HYDRODYNAMICS AND HYDRAULICS

The Optimum Design of the Lateral Inlet Casing of a Hydraulic Turbine
   T.S. Luu, B. Viney and J. Corniglon ........................................... 491

Determination of the Ratio of Flow Rates in Bifurcating Channels
   Mitutosi Kawaguti and Akiko Hamano ........................................... 495

Operating Characteristics of a Reciprocating Water Pump
   Goh Sing You ............................................................................... 501

Computation of Hydrodynamic Force for Three-Dimensional Vibrating-Floating Body
   by Using Similar Element Method
   Zhang Diming and Hou Shuling ..................................................... 508

Hydrodynamic Calculation for Submarines
   Huang Fuhua ............................................................................... 514

Study of Flow Field in a Hydrocyclone
   A. Ghosh .................................................................................... 518

Calculation of the Flow past a Supercavitating Hydrofoils near a Free Surface in
   a Water of Finite Depth
   Computational Fluid Dynamics Group, Wuhan Institute of Water
   Transportation Engineering, China ................................................ 523

Unsteady Flows in a Contracting or Expanding Vortex Tube
   Shigeo Uchida and Yukihiko Nakata .............................................. 531

On the Pressure Distribution around a Circular Oscillating Cylinder in
   Still Water and in Currents
   Hah Kwai Fun, Chew Yong Tian and Cham Tao Soon ...................... 537

Numerical Calculation of Free Outflow under a Sluice Gate
   Chen Yaosong and Peng Yuelin .................................................... 544

Hydrodynamic Pressure on Sluice Gate Plane Wetted by Water in the Case of Free Outflow
   Chen Zhencheng ........................................................................ 550

An Adaptive Algorithm for Updating the Parameters of the Rating Curve of a
   Gauging Station
   Gnanathikkam Emmanuel Amirthanathan ....................................... 558

Overflow Turbulent Boundary Layer and Its Characteristics
   Liang Zaichao ............................................................................. 564

The Hydraulic Properties of Crossing-Flow in an Intersected Fracture
   Tian Kaiming ............................................................................ 571

Experimental Study on Scale Effects of Developed Cavitation
   Hua Hanjin and He Yousheng ........................................................ 577

Experimental Study of Cavitation Resistance of Concrete, Brittle Cementing Materials
   and Some Metals in Sediment Flow
   Huang Jitang, Tian Liyan and Li Yuzhu ......................................... 584

Cavitation Noise as Influenced by Viscous Effects
   V.H. Arakeri and V. Shanmuganathan .......................................... 590

 Calibration of an Orifice by the “Falling Head” Technique
   Sacha Sethaputra and Charles Peterson ........................................ 597
Analysis of a Wind Tunnel Contraction Using a Panel Method  
*D.R. Patil, G.R. Shevare and S.K. Sane* .................................................. 603

3-D Shock-Boundary Layer Solution from N-S Equation  
*Ma Yanwen and Cheng S.I.* ................................................................. 609

An Explicit-Implicit Method for Numerical Solution of Supersonic and Hypersonic Separated Flow  
*Zhang Hanxin, Lu Linsheng, Yu Zechu and Ma Zhankui* ......................... 615

Vortex and Contour Dynamics in Two Dimensions: Steady State and Dynamical Solutions of the Euler Equations  
*H.M. Wu, E.A. Overman and N.J. Zabusky* ........................................... 623

A Boundary Difference Scheme and Its Application in the Calculation of Steady-State Axisymmetric Nozzle Flow  
*Huang Lan-chieh* .............................................................................. 629

A Difference Method for 3-D Incompressible Turbulent Boundary-Layer Calculations by Using Non-orthogonal Curvilinear Coordinate System  
*Shen Qixin* .................................................................................... 635

Numerical Simulation of Base Flow  
*S.K. Saxena, S.M. Deshpande, R. Narasimha and T.S. Prahlad* .............. 643

Wall Vorticity Schemes for Viscous Incompressible Flow  
*Zhang Huisheng* .............................................................................. 649

Boundary Condition Effects on the Computation of Channel Flows  
*Laszlo Fuchs* .................................................................................. 656

The Conjugate Gradient Method and Block Iterative Method for Penalty Finite Element of Three-Dimensional Navier-Stokes Equations  
*Li Kaitai, Huang Aixiang, Li Du and Liu Zhixing* ............................... 664

Modelling Transient State Circulation and Temperature Distribution in Shallow Cooling Pond by Finite Element Method  
*Zhu Xian, Wu Jianghang and Liu Lanfen* ........................................... 672

Finite Layer Numerical Simulation for Thermal Density Flow in Channel  
*Zhang Benzhao* ............................................................................. 679

Numerical Study of Flow past Two Circular Cylinders  
*Yoshifumi Shida, Kunio Kuwahara and Hideo Takami* ......................... 686

Numerical Solution of Multimedium Flow with Various Discontinuities  
*Wu Xionghua and Zhu Youlan* ......................................................... 692

A Term-Condensing Method and Generalized Potential-, Stream- and Path-Functions for 3-D Compressible Viscous Flow  
*Liu Gaolian* ..................................................................................... 698

**LOW REYNOLDS NUMBER FLOW AND KINETIC THEORY OF GASES**

The Rate of Coagulation in a Dilute Dispersion of Small Particles  
*Wen Jingsong and G.K. Batchelor* .................................................... 705

Fine Structure of the Stokes Flow near the Central Hole of a Torus  
*Shoichi Wakiya* .................................................................................. 711
Low Reynolds-Number Flow past a Cylindrical Body
  
  Ko Tamada, Hiroyuki Miura and Tosio Miyagi ......................... 717

Slow Viscous Flow past a Circular Cylinder
  
  Chen Jingyao .......................................................... 723

Kinetic Theory of Slightly Strong Evaporation and Condensation for 
  a Two-Surface Problem
  
  Yoshimoto Onishi .................................................... 732

The Maxwellian Iteration of Ikenberry & Truesdell in the Kinetic Theory 
  of Correlated Gases
  
  Chen Tianquan .......................................................... 738

VORTEX, WAKE & JET

Wake/Boundary Layer and Wake-Wake Interactions—Smoke Flow 
  Visualisation and Modelling
  
  A.M. Savill and Zhou Ming De ....................................... 743

Investigation of Fluid Jet Interaction
  
  Subir Kar ............................................................... 753

Flow behind Stepped and Tapered Coaxial Cylinders
  
  N.W.M. Ko, A.S.K. Chan and C.M. Kan ............................. 755

Air Entrainment by Plunging Liquid Jet
  
  Afzal Ahmad ............................................................ 761

Visualization of Longitudinal Vortices in a Concave Surface Boundary Layer
  
  S.H. Winoto ............................................................ 767

Flowfields Produced by a Vortex Ring or a Pair of Rectilinear Vortices 
  Approaching a Solid Body
  
  Hideo Yamada, Hano Yamabe and Tatsuya Matsui ..................... 777

Entanglement of Two Vortex Filaments
  
  Ryuji Takaki and A.K.M.F. Hussain .................................. 783

Experimental Determination of a Three-Dimensional Vorticity Field in 
  the Boundary-Layer Transition Process
  
  David R. Williams and Francis R. Hama ............................ 789

Unsteady Flow Visualization of Airfoils with Spoilers
  
  Satyanarayana Bodapati ............................................... 795

Autorotation of a Symmetrical Body
  
  Yuko Oshima and Naoki Izutsu ...................................... 801

Experimental Study of Starting Flow behind a Triangular Prism in Uniform and 
  Stratified Flow
  
  Huhe Aode, Yan Mingshan, Zhang Boyin and Liu Keqi ................ 807

Surface Flow Patterns on a Delta Wing Mounted on a Cylindrical Body
  
  Li Suxun ............................................................... 813

Experimental Studies of Free-Surface Vortices near the Entrances of Outlets
  
  Xie Peizhen, Lin Zongxin, Yang Zhengjun and Pan Mengqin ........ 821
TWO-PHASE FLOW

Heat Flux for Countercurrent Two-Phase Flow of Laminar Falling Film and Turbulent Vapour in Vertical Tubes
R. Mottaghian and Z. Nejat ................................................................. 958

Reacting Flow in Gas-Solid Fluidization Systems
Chen Gantang, Sun Guanglin, Wang Zhangmou and Chen Jianxin .......... 964

Study of the Influence of Density and Grain-Size of Cloud of Particles on Drag Coefficient in Gas-Solid Two-Phase Flow
Zhou Yanhuang, Sun Xingchang and Yin Hebao ................................. 971

Mixing and Combustion in Two-Phase Flow of a Pulverized-Coal Flame Stabilized by a Plasma Jet
Zhou Lixing and Yang Zeliang ............................................................. 977

Film Boiling Characteristics of Freon-12
C.P. Tso, S.H. Teh and K.K. Lim ...................................................... 988

Strong Shock Wave Propagation in Two-Phase Flow
Fan Zhengqiao, Lian Guisen and Ren Anlu ....................................... 993

FLOW THROUGH POROUS MEDIA

Microscopic and Macroscopic Researches on Multiphase Flow through Porous Media
Guo Shangping, Huang Yanzhang, Ma Xiaowu and Zhou Juan ............... 997

Two-Phase Displacement of Non-Newtonian Fluid
Chen Lilian and Wu Wangyi ............................................................... 1003

On Transport of Groundwater Contamination
A. Das Gupta ..................................................................................... 1009

Turbulent Convection in Porous Media Using Spectral Method
N. Rudraiah ...................................................................................... 1015

Thermal Cellular Convection in a Rotating Fluid Saturated Porous Layer Using Brinkman’s Model
R. Friedrich and N. Rudraiah ............................................................ 1021

Parameter Identification of Fluid Dynamic Systems with Double Porosity Li Yun and Lang Zhaoxin ......................................................... 1032

A New Numerical Method of Simulating Two-Dimensional Two-Phase Flow through a Medium with Single- or Double-Porosity
Liu Mingxin and Chen Zhongxiang .................................................... 1038

NON-NEWTONIAN FLOW

On the Explicit Form of Differential Operator for the Oldroyd Rate Type Constitutive Equation
Chen Yihong, Xu Yuanze and C.F. Chan Man Fong ............................ 1044

Mechanical Laws of Polymer Drag Reduction Flow
Dou Guoren ...................................................................................... 1050

Viscoelastic Effects on Slider Bearing Lubrication
C.F. Chan Man Fong and Cai Fushi .................................................. 1057
Influence of Inertia Effect on the Kinematics and Dynamics in Converging Flow of Non-Newtonian Fluids
Xu Yuanze and Chen Yihong ................................................. 1062
Study on Mass and Heat Transfer in Film Flow of Non-Newtonian Power-Law Fluids
Jiang Tiqian ................................................................. 1070
Stability of Flow of a Generalized Second-Order Fluid down an Inclined Plane
Fan Chun ................................................................. 1078
Rheological Properties of Some Water-Based Gel Fracturing Fluids from Polymers
Xu Xi, Pu Delin, Yang Changmei, Yang Zhonghe,
Huo Junjun, Zhu Zhaoming, Xiang Shiqi and Lian Shengjiang ................. 1084

MAGNETOHYDRODYNAMICS AND PHYSICO-CHEMICAL FLOW

Some New Comments on Hydromagnetic Shocks
C. K. Chu ................................................................. 1091
MHD Flow in a Homopolar Device with Wire Electrodes
Hu Wenrui ................................................................. 1093
On the Problems of Magnetohydrodynamic (MHD) Lubrication by the Methods
of Quasilinearization and Adjoint
Guo Bentie, Ying Yuyan and Chen Bangguo ..................................... 1100
A Theoretical Model of Gas Flow Laser Amplifier
Gao Zhi ................................................................. 1107
Numerical Simulation of Two-Dimensional Two-Phase Stefan Problems
Xin Xiaokang and E. Varoglu .................................................. 1113
Theory of the Reaction Surface with $L_{ef} \neq 1$ and Its Application to Investigation of
Oxidation-Sublimation Coupling Process
Zhong Jiakang ................................................................. 1119

BIOFLUID-MECHANICS

The Inlet Effect on the Drag Factor of a Sphere at Low Reynolds Number
Wu Wangyi and Richard Skalak .................................................. 1125
Some New Phenomena of Steady Flow in Collapsible Tube
Tao Zulai and Xi Baoshu ......................................................... 1132
An Investigation on Electrochemical Measurement of Wall Shear Stresses in
the Flow Field of Cardiac Valve Prosthesis
Deng Xiaoyan ................................................................. 1139

AUTHER INDEX ................................................................. 1147
