Nonperturbative Quantum Field Theory

Edited by

G. 't Hooft
University of Utrecht
Utrecht, The Netherlands

A. Jaffe
Harvard University
Cambridge, Massachusetts

G. Mack
University of Hamburg
Hamburg, Federal Republic of Germany

P. K. Mitter
University of Paris VI
Paris, France

and

R. Stora
LAPP
Annecy-le-Vieux, France

Plenum Press
New York and London
Published in cooperation with NATO Scientific Affairs Division
CONTENTS

LECTURES*

Operator Methods in String Theory. .......................... 1
L. Alvarez-Gaume

On the Fixed Point Formula and the Rigidity
Theorem of Witten ........................................... 13
R. Bott

Non-Commutative Geometry .................................... 33
A. Connes

Statistics of Fields, the Yang Baxter Equation
and the Theory of Knots and Links ........................... 71
J. Fröhlich

Topological Actions in Two-Dimensional Quantum
Field Theories .................................................. 101
K. Gawędzki

Issues in Superstring Theory ................................ 143
M.B. Green

Lectures on Heterotic Strings and Orbifold
Compactifications .............................................. 173
J.A. Harvey

Quantum Gravity and Black Holes .............................. 201
G. ’t Hooft

Supersymmetric quantum Fields and Infinite
Dimensional Analysis ........................................... 227
A. Jaffe and A. Lesniewski (lecture presented
by A. Jaffe)

Solution of the Lattice $\phi^4$ Theory in 4 Dimensions .... 281
M. Lüscher

Multigrid Methods in Quantum Field Theory .................. 309
G. Mack

Introduction to Conformal Invariant Quantum
Field Theory in Two or More Dimensions .................... 353
G. Mack

vii
Continuous Wilson Renormalization Group
and the 2-D O(n) Non-linear
\sigma-Model. ........................................ 385
P.K. Mitter and T.R. Ramadas

Numerical Simulations: Old and New Problems .......... 427
G. Parisi

The Role of Locality in String Quantization.......... 433
R. Stora

SEMINARS

On the BRST Structure of the Closed String
and Superstring Theory. .......................... 445
L. Baulieu

The A-D-E Classification of Conformal Invariant
Field Theories in Two Dimensions. .................. 453
A. Cappelli

The Breakdown of Dimensional Reduction ............... 467
A. Kupiainen

Vanishing Vacuum Energies for Nonsupersymmetric
Strings ............................................. 475
G. Moore

Torsion Constraints and Super Riemann Surfaces ....... 501
P. Nelson

Renormalization Theory for Use in Convergent
Expansions of Euclidean Quantum
Field Theory. ....................................... 503
A. Pordt

Power Counting and Renormalization in Lattice
Field Theory. ........................................ 513
T. Reisz

Open Strings and their Symmetry Groups .............. 521
A. Sagnotti

New Methods and Results in Conformal QFT$_2$
and the String Idea ................................ 529
B. Schroer

On V. Pasquier A-D-E Models. ........................ 555
R. Seneor

Generalization of the Sugawara Construction .......... 567
J. Thierry-Mieg

Conformal Field Theory at c = 1 ..................... 577
R. Dijkgraaf, E. Verlinde, and H. Verlinde
*D. Friedan (Chicago) lectured on conformal field theory and modular geometry, but was unable to contribute to these proceedings
