Preface	x ⁱ
List of Functions	xvii
List of Terms	xix
List of MATLAB Commands	xxvii
Prologue	1
I	7
1 Numbers, problems, and algorithms	9
1.1 Floating point numbers	9
1.2 Problems and conditioning	15
1.3 Stability of algorithms	20
2 Square linear systems	31
2.1 Polynomial interpolation	31
2.2 Computing with matrices	36
2.3 Linear systems	44
2.4 LU factorization	51
2.5 Efficiency of matrix computations	61
2.6 Row pivoting	68
2.7 Vector and matrix norms	74
2.8 Conditioning of linear systems	80
2.9 Exploiting matrix structure	84
3 Overdetermined linear systems	95
3.1 Fitting functions to data	96
3.2 The normal equations	103
3.3 The QR factorization	107
3.4 Computing QR factorizations	113
4 Roots of nonlinear equations	121
4.1 The rootfinding problem	121
4.2 Fixed point iteration	127
4.3 Newton's method in one variable	135

4.4	Interpolation-based methods	143
4.5	Newton for nonlinear systems	152
4.6	Quasi-Newton methods	159
4.7	Nonlinear least squares	166
5	Piecewise interpolation and calculus	175
5.1	The interpolation problem	175
5.2	Piecewise linear interpolation	182
5.3	Cubic splines	189
5.4	Finite differences	196
5.5	Convergence of finite differences	202
5.6	Numerical integration	208
5.7	Adaptive integration	217
6	Initial-value problems for ODEs	227
6.1	Basics of initial-value problems	227
6.2	Euler's method	235
6.3	Systems of differential equations	242
6.4	Runge–Kutta methods	249
6.5	Adaptive Runge–Kutta	255
6.6	Multistep methods	261
6.7	Implementation of multistep methods	266
6.8	Zero-stability of multistep methods	273
II		279
7	Matrix analysis	281
7.1	From matrix to insight	281
7.2	Eigenvalue decomposition	286
7.3	Singular value decomposition	293
7.4	Symmetry and definiteness	299
7.5	Dimension reduction	304
8	Krylov methods in linear algebra	311
8.1	Sparsity and structure	312
8.2	Power iteration	319
8.3	Inverse iteration	326
8.4	Krylov subspaces	332
8.5	GMRES	338
8.6	MINRES and conjugate gradients	344
8.7	Matrix-free iterations	349
8.8	Preconditioning	353
9	Global function approximation	359
9.1	Polynomial interpolation	359
9.2	The barycentric formula	365
9.3	Stability of polynomial interpolation	369
9.4	Orthogonal polynomials	377
9.5	Trigonometric interpolation	384
9.6	Spectrally accurate integration	390

9.7	Improper integrals	398
10	Boundary-value problems	409
10.1	Shooting	410
10.2	Differentiation matrices	418
10.3	Collocation for linear problems	425
10.4	Nonlinearity and boundary conditions	431
10.5	The Galerkin method	439
11	Diffusion equations	449
11.1	Black–Scholes equation	449
11.2	The method of lines	455
11.3	Absolute stability	463
11.4	Stiffness	471
11.5	Method of lines for parabolic PDEs	477
12	Advection equations	485
12.1	Traffic flow	485
12.2	Upwinding and stability	490
12.3	Absolute stability for advection	495
12.4	The wave equation	499
13	Two-dimensional problems	507
13.1	Tensor-product discretizations	507
13.2	Two-dimensional diffusion and advection	515
13.3	Laplace and Poisson equations	524
13.4	Nonlinear elliptic PDEs	531
A	Review of linear algebra	539
	Bibliography	545
	Index	551
