AACHEN **ACOUSTICS** COLLOQUIUM
AACHENER **AKUSTIK** KOLLOQUIUM

Scientific Management

Prof. Dr.-Ing. S. Pischinger

Prof. Dr.-Ing. L. Eckstein

Prof. Dr.-Ing. K. Genuit

Prof. Dr. rer. nat. M. Vorländer

Organizing Committee

Georg Eisele

Jens Viehöfer

Roland Sottek

Gottfried Behler

CONTENTS

A coupled simulation approach to assess the NVH impact of cylinder de-activation	1
H. Furuholm, M. Olsson Volvo Cars, Gothenburg, Sweden	
M. Poggi, S. Gregory Ricardo UK Ltd., United Kingdom	
Engine presence – An NVH correlation study of vehicle and engine test cell measurements	11
P. Alenius, T. Lindbom Volvo Cars, Gothenburg, Sweden	
C. Maunz, S. Brandl AVL List GmbH, Graz, Austria	
CAE-based NVH development of the new 4- and 6-Cylinder Diesel engines	19
C. Meier, S. Bikker Daimler AG, Stuttgart, Germany	
Calculation of the structure borne noise of vehicle powertrains, their validation and re-calculation to the individual source contributions Part 1: Analysis of structure born noise and noise transfer path in modern powertrains with MBD simulation	27
T. Märkle, B. Eichinger, J. Schwing Audi AG, Ingolstadt, Germany	
Calculation of the structure borne noise of vehicle powertrains, their validation and re-calculation to the individual source contributions Part 2: Use of NTPA for the calculation of the contribution of individual excitation sources from total noise	35
Ch. Schweiger, Th. Resch AVL LIST GmbH, Graz, Austria	
A. Acri Virtual Vehicle Competence Centre, Graz, Austria	

Root cause analysis of the phenomenon "knocking noise" of vehicle shock absorbers	41
T. Böttcher, L. Eckstein, J. Viehöfer Forschungsgesellschaft Kraftfahrwesen mbH Aachen, Aachen, Germany	
TPA light – a fast and reliable transfer path analysis method	53
B.-G. Emretsson, C. Mohr LuK GmbH & Co. KG, Bühl, Germany	
Dynamic beamforming using moving phased array with integrated 3D scanner	65
D. Döbler, A. Meyer GFal e.V., Berlin, Germany	
G. Heilmann, M. Kerscher, P. Höhna gfai tech GmbH, Berlin, Germany	
Comprehensive model for the assessment of the NVH-behavior of electric vehicles	75
M. Müller-Giebeler, J. Klein, M. Vorländer Institute of Technical Acoustics (ITA), RWTH Aachen University, Germany	
P. Drichel, G. Jacobs Institute for Machine Elements and Machine Design (IME), RWTH Aachen University, Germany	
M. Jaeger, S. Rick, K. Hameyer Institute of Electrical Machines (IEM), RWTH Aachen University, Germany	
M. Wegerhoff Formerly: Institute for Machine Elements and Machine Design (IME), RWTH Aachen University, Germany; Currently: HEAD acoustics GmbH, Herzogenrath, Germany	
FEM-based structure-borne sound analysis for electric drives	89
S. Peters CADFEM GmbH, Leinfelden-Echterdingen, Germany	
J. Wibbeler, M. Hanke CADFEM GmbH, Berlin, Germany	
NVH development process for E-drive systems	97
R. Sereinig, O. Grieshofer, W. Hinterberger Engineering Center Steyr – MAGNA Powertrain, St. Valentin, Austria	

Analysis of the dynamic excitation behavior of an electric vehicle transmission	107
M. Ahmad, C. Löpenhaus, C. Brecher Laboratory for Machine Tools and Production Engineering, RWTH Aachen University, Germany	
Acoustic optimization of an electric wheel hub motor	117
F. Duvigneau, U. Gabbert Otto-von-Guericke-University Magdeburg, Institute of Mechanics, Germany	
S. Perekopskiy, R. Kasper Otto-von-Guericke-University Magdeburg, Institute of Mobile Systems, Germany	
OLF - Performance characterization of structure borne noise damping products	129
H.-U. Obst, C. Röttges Faist Chemtec GmbH Worms, Worms, Germany	
Noise reduction approach using experimental statistical energy analysis on a high pressure pump for gasoline direct injection systems	137
K. Ikeda DENSO CORPORATION, Japan	
T. Yamazaki Kanagawa University, Japan	
What does your car say with its sound and vibration? - Brand sound design	147
E. Altinsoy Technische Universität Dresden, Dresden, Germany	
Topology optimization with NVH constraints	149
A. Backes TECOSIM Technische Simulation GmbH	
Acoustic engine response and drivability – a comprehensive evaluation approach based on test drives and noise metrics	151
F. Kamp, P. Sellerbeck, C. Nettelbeck HEAD acoustics GmbH, Herzogenrath, Germany	

Development of a sportiness metric for vehicle sounds	163
D. Maiberger, U. Letens Daimler AG, Sindelfingen, Germany	
S. van de Par Carl von Ossietzky University, Department of Medical Physics and Acoustics, Acoustics Group, Oldenburg, Germany	
Impact of automotive megatrends on NVH	175
Ch. Steffens, G. Eisele, M. Kauth FEV Europe GmbH, Aachen, Germany	
P. Glusk FEV Consulting GmbH, Aachen, Germany	
Vehicle wind noise prediction at a far field location through solutions of Navier-Stokes and Ffowcs Williams & Hawkings equations	187
B. Gümüş, E. Güneş Ford Otosan, Istanbul, Turkey	
Y. Özyörük Middle East Technical University, Ankara, Turkey	
Efficient method for extending car wind noise prediction frequency range based on steady CFD input	197
F. Bissardella Magna Steyr Engineering AG & CO KG, Graz, Austria	
A. Talbot, Y. Detandt Free Field Technologies, Mont Saint Guibert, Belgium	
Using component test bench measurements to predict pass-by noise contributions for trucks virtually	207
P. Corbeels, P. Van de Ponselee, M. Choukri Siemens Industry Software NV, Leuven, Belgium	
R. Sinnig, Dr. W. Kerres Daimler AG, Stuttgart-Untertürkheim, Germany	
Aeroacoustics simulation of pulsated exhaust flow	219
C. Triplet, N. Driot, J. Voillequin Tenneco GmbH, Edenkoben, Germany
