Leavitt Path Algebras
Contents

1 The Basics of Leavitt Path Algebras: Motivations, Definitions and Examples ................................................................. 1
   1.1 A Motivating Construction: The Leavitt Algebras .................. 2
   1.2 Leavitt Path Algebras .................................................... 5
   1.3 The Three Fundamental Examples of Leavitt Path Algebras ...... 10
   1.4 Connections and Motivations: The Algebras of Bergman, and Graph C*-Algebras .......................................................... 12
   1.5 The Cohn Path Algebras and Connections to Leavitt Path Algebras ........................................................................... 14
   1.6 Direct Limits in the Context of Leavitt Path Algebras .......... 23
   1.7 A Brief Retrospective on the History of Leavitt Path Algebras ... 30

2 Two-Sided Ideals ........................................................................ 33
   2.1 The Z-Grading ............................................................... 36
   2.2 The Reduction Theorem and the Uniqueness Theorems ........... 46
   2.3 Additional Consequences of the Reduction Theorem .......... 54
   2.4 Graded Ideals: Basic Properties and Quotient Graphs ........... 56
   2.5 The Structure Theorem for Graded Ideals, and the Internal Structure of Graded Ideals ..................................................... 65
   2.6 The Socle ........................................................................ 76
   2.7 The Ideal Generated by the Vertices in Cycles Without Exits ... 83
   2.8 The Structure Theorem for Ideals, and the Internal Structure of Ideals .............................................................................. 89
   2.9 Additional Consequences of the Structure Theorem for Ideals. The Simplicity Theorem .................................................... 97

3 Idempotents, and Finitely Generated Projective Modules ............. 103
   3.1 Purely Infinite Simplicity, and the Dichotomy Principle ........... 104
   3.2 Finitely Generated Projective Modules: The \( \gamma \)-Monoid ......... 108
   3.3 The Exchange Property .................................................... 116
   3.4 Von Neumann Regularity .................................................. 121
   3.5 Primitive Non-Minimal Idempotents ..................................... 125
7.3.3 The Classification Question for Graphs with Finitely Many Vertices and Infinitely Many Edges ........................................... 270
7.3.4 Graded Grothendieck Groups, and the Corresponding Graded Classification Conjecture ........................................... 271
7.3.5 Connections to Noncommutative Algebraic Geometry ...... 273

References .......................................................................................................................... 275
