<i>Preface</i>	ix
<b>1. Modeling Self-Heating Effects in Nanoscale Devices</b>	<b>1</b>
<i>Katerina Raleva, Abdul Rawoof Shaik, Suleman Sami Qazi, Robin Daugherty, Akash Laturia, Ben Kaczer, Eric Bury, and Dragica Vasileska</i>	
1.1 Introduction	1
1.2 Self-Heating	3
1.2.1 General Considerations	3
1.2.2 Arizona State University Model Description	8
1.3 Simulation Results	11
1.3.1 Self-Heating Effects in FD-SOI Devices	11
1.3.1.1 Basic findings	11
1.3.1.2 Thermal boundary conditions and proper choice of the device simulation domain	13
1.3.2 Can We Reduce Self-Heating?	15
1.3.2.1 Single-gate versus dual-gate FD-SOI devices	15
1.3.2.2 FD-SOI devices with diamond and AlN BOX	17
1.3.3 Multiscale Modeling: Modeling of Circuits (CS and CD Configuration)	20
1.4 Conclusions and Future Directions of Research	26
<b>2. Simulation of Charge and Thermal Transport</b>	<b>31</b>
<i>Zlatan Aksamija</i>	
2.1 Introduction	31
2.2 The Boltzmann Transport Equation for Electrons	32
2.3 Electron Scattering Rates	33
2.4 The Phonon Boltzmann Transport Equation	36
2.5 Phonon Scattering and Anharmonic Decay	37

<b>3. Phonon Emission and Absorption Spectra in Silicon</b>	<b>41</b>
<i>Zlatan Aksamija</i>	
3.1 Introduction	41
3.2 The Adiabatic Bond Charge Model for Phonons	42
3.3 Numerical Computation of Phonon Spectra	45
3.4 Results and Discussion	53
3.5 Conclusions	57
<b>4. Device Simulation, Including the Full Phonon Dispersion</b>	<b>63</b>
<i>Zlatan Aksamija</i>	
4.1 Introduction	63
4.2 Monte Carlo Device Simulation	64
4.3 Thermal Properties of Silicon	69
4.4 Results	75
4.5 Conclusions	83
<b>5. Anharmonic Decay of Nonequilibrium Intervalley Phonons in Silicon</b>	<b>87</b>
<i>Zlatan Aksamija</i>	
5.1 Introduction	87
5.2 Intervalley Phonon Emission	89
5.3 Monte Carlo Simulation of Anharmonic Phonon Decay	92
5.4 Scattering of Acoustic Phonons	94
5.5 Results and Discussion	96
<b>6. Phonon Monte Carlo: Generating Random Variates for Thermal Transport Simulation</b>	<b>109</b>
<i>L. N. Maurer, S. Mei, and I. Knezevic</i>	
6.1 Introduction	109
6.2 Generating Random Variates	111
6.2.1 The Inversion Method	111
6.2.2 The Rejection Method	112
6.3 Overview of Phonon Monte Carlo	114
6.4 Generating Phonon Attributes in PMC	119
6.4.1 Thermal Phonons with Full Dispersion in 2D	119

6.4.2	Thermal Phonons with an Isotropic Dispersion in 3D	123
6.5	Diffuse Boundary Scattering	124
6.6	Contacts	128
6.6.1	3D Internal Contacts	129
6.6.2	3D Boundary Contacts	130
6.6.3	2D Contacts	131
6.7	Energy Conservation	132
6.8	Conclusion	134
<b>7.</b>	<b>Hybrid Photovoltaic-Thermoelectric Solar Cells: State of the Art and Challenges</b>	<b>139</b>
	<i>Bruno Lorenzi and Dario Narducci</i>	
7.1	Introduction	139
7.2	A Primer on Thermoelectricity	141
7.3	Strategies of Thermoelectric Solar Energy Conversion	143
7.3.1	Solar Thermoelectric Generators	144
7.3.2	Hybrid Cogenerative Solar Thermoelectric Generators	144
7.3.3	Hybrid Thermoelectric-Photovoltaic Generators	145
7.4	Photovoltaic Generation	146
7.4.1	Physical Principles	147
7.4.2	The p-n Junction	151
7.4.3	Single-Junction Solar Cells: Diode under Illumination	153
7.4.4	Photovoltaic Technology	157
7.4.5	PV Efficiency, Energy Gap, and Temperature	158
7.5	Thermoelectric Hybridization of PV Cells	164
7.5.1	Conditions for Enhanced Efficiency in HTEPV Devices	167
7.5.2	Optimal Layout of the Thermoelectric Stage	170
7.5.3	Optical and Thermal Concentration	172
7.6	Summary and Concluding Remarks	174

<b>8. Phonon Transport Effects in Ultranarrow, Edge-Roughened Graphene Nanoribbons</b>	<b>183</b>
<i>Neophytos Neophytou and Hossein Karamitaheri</i>	
8.1 Introduction	184
8.2 Methods	187
8.2.1 Phonon Dispersion	187
8.2.2 Phonon Dispersion Features	190
8.2.3 Phonon Transport within NEGF	192
8.3 Influence of Roughness on Phonon Transport	193
8.3.1 Influence of Roughness on Phonon Transmission	193
8.3.2 Influence of Roughness on Different Phonon Modes	196
8.3.3 Ballistic, Diffusive, and Localized Phonon Modes	197
8.4 Transmission Effects in Width-Modulated GNRs	199
8.4.1 Influence of Width Modulation on Acoustic Modes	200
8.4.2 Influence of Width Modulation on Optical Modes	200
8.4.3 Influence of Width Modulation on Low-Density-Mode Regions	201
8.4.4 Influence of Width Modulation on Quasi-Acoustic Modes	201
8.4.5 General Discussion of Width- Modulated Features	203
8.5 Thermal Conductance	204
8.6 Characteristic Scattering Length Scales	206
8.6.1 Mean Free Path for Scattering	206
8.6.2 Localization Length	209
8.7 Thermal Conductivity	211
8.8 Conclusions	213
<i>Index</i>	<b>223</b>
