

How the Universe Works

Introduction to Modern Cosmology

Serge Parnovsky

Taras Shevchenko National University of Kyiv, Ukraine

Aleksei Parnowski

Space Research Institute, Ukraine

Contents

Preface	vii
List of Table	xiii
List of Figures	xv
Chapter 1. The Laws of the Universe	1
1.1 Roots of Cosmology	1
1.2 Principles of General Relativity	4
1.2.1 Perihelion precession	5
1.2.2 Deviation of light	6
1.2.3 Gravitational redshift	7
1.2.4 Other effects and tests	8
1.2.5 Chosen frame	9
1.2.6 Gravity, inertia, and tidal forces	11
1.2.7 Lunar tides	13
1.2.8 Space, time, and space-time	14
1.2.9 Curved space-time	17
1.3 How Much Does Light Weigh?	19
1.3.1 Baryonic matter	21
1.3.2 Radiation	22
1.3.3 Dark energy and antigravity	22

Chapter 2. The Expanding Universe	25
2.1 Einstein's Static Universe	25
2.2 Expansion and Redshift	26
2.2.1 Other galaxies and their recession	26
2.2.2 Expansion	27
2.2.3 Redshift	28
2.3 Hubble's Law*	30
2.4 Friedmann Models	33
2.4.1 Arrow of time	35
2.5 Geometry of the Universe	38
2.6 Scale Factor	42
2.6.1 Deceleration parameter	42
2.7 Non-Relativistic Friedmann Solutions*	43
2.7.1 Cosmological evolution without cosmological constant*	43
2.7.2 Study of solutions*	47
2.7.3 Deceleration parameter*	50
2.7.4 Matter with nonzero pressure in the expanding Universe*	51
2.8 Modern Modification of the Model	53
2.8.1 Cosmological constant strikes back	53
2.8.2 Standard cosmological model	55
2.9 Distances in Astronomy	57
 Chapter 3. Early Universe	 61
3.1 The Big Bang	61
3.2 Cosmic Microwave Background: an Echo of the Big Bang . .	65
3.2.1 CMB discovery	66
3.2.2 CMB anisotropy	67
3.2.3 Bringing cosmology to space	68
3.2.4 Ground studies of the CMB	70
3.2.5 CMB fluctuations spectrum	71
3.2.6 Conservation of energy	72
3.2.7 Speculations	74
3.3 Evolution of the Early Universe*	75
3.4 Cosmological Horizon	76

3.5	Distance to the Cosmological Horizon*	78
3.6	Inflation of the Universe	78
3.6.1	Inflation models	82
3.7	Multiverse and the Anthropic Principle	87
3.7.1	Pulsating Universe	90
3.8	The Matter in Making	91
3.8.1	Big Bang nucleosynthesis	91
3.8.2	Stellar nucleosynthesis	94
3.8.3	The antimatter problem	95
Chapter 4. Dark Matter		99
4.1	Revolution Comes	99
4.2	Evidence for Dark Matter	100
4.2.1	Virial mass	101
4.2.2	Galactic rotation curves	102
4.2.3	Mass-to-luminosity ratio	106
4.2.4	Galactic mergers	107
4.2.5	Cosmic flows	108
4.2.6	Growth rate of density fluctuations	109
4.2.7	Gravitational lensing	111
4.2.8	Alternative models	113
4.3	What Makes up Dark Matter?	114
Chapter 5. Dark Energy		119
5.1	Cosmological Evidence for Dark Matter and Dark Energy	119
5.1.1	Type Ia supernovae	121
5.1.2	Baryonic acoustic oscillations	123
5.1.3	CMB spectrum	125
5.2	Dark Energy	125
5.3	Time to Big Rip*	129
5.4	Other Kinds of Matter	130
Chapter 6. Black Holes and Other Exotics		133
6.1	Black Holes	133
6.1.1	Schwarzschild black holes	135
6.1.2	Reissner–Nordström black hole	139
6.1.3	Kerr black hole	140

6.2 Naked Singularities	142
6.3 Wormholes	143
Summary	145
Appendix A. Cosmological Evolution with a Cosmological Constant*	149
A.1 De Sitter Solution*	150
A.2 Λ CDM Model*	150
A.3 Flat Λ CDM Model*	153
Bibliography	159
Further Reading	160
Index	161

*Advanced material
