

Exploring Research Data Management

Andrew M. Cox and Eddy Verbaan

Contents

List of tables and figures	xi
1 Introducing research data management	1
Aims	1
A thought experiment	1
RDM	4
Why is RDM important now?	5
What does the practice of supporting RDM actually involve?	6
Who is this book for?	6
About the book	7
Further reading	9
2 The social worlds of research	11
Aims	11
Introduction	11
The research landscape	11
The organisation of research	13
The research lifecycle	16
The experience of research: research and identity	16
Further reading	18
3 What are research data?	19
Aims	19
Research data are important to (some) researchers	19
Types of research data	21
Some definitions of research data	22
Data collections	25
Data lifecycles	26
Research data is complex	27
Information management and RDM	30
Further reading	30

4	Case study of RDM in an environmental engineering science project	33
	Aims	33
	The project	33
	The research method	34
	The data	35
	The challenge of metadata	37
	The need to foster a culture around metadata	37
	Data sharing	38
	Talking to researchers	39
	Further reading	40
5	RDM: drivers and barriers	41
	Aims	41
	Introduction	41
	E-research	42
	The 'crisis of reproducibility'	43
	Open science	45
	Government and funder policy	46
	Policy developments	48
	Journal policies	50
	FAIR data principles	50
	Data citation	51
	RDM and the new public management	52
	Drivers and barriers	53
	Further reading	55
6	RDM as a wicked challenge	57
	Aims	57
	Types of problem	57
	The wicked challenge concept	58
	Is RDM wicked?	60
	Leadership in a wicked challenge context	62
	Further reading	64
7	Research data services	67
	Aims	67
	Research data services (RDS)	67
	Vision, mission, strategy and governance	69
	Stakeholders	71
	Supporting research	71

Further reading	73
8 Staffing a research data service	75
Aims	75
New activities and roles	75
Who does what?	79
The collaborative research data service	81
New skills and roles	82
Further reading	83
9 Requirements gathering for a research data service	85
Aims	85
Finding out more about an institution	85
Surveys	86
Interviews and focus groups	92
Further reading	93
10 Institutional policy and the business case for research data services	95
Aims	95
Writing a policy	95
Developing a policy	95
Content of a policy	97
Layout and style	99
Using and updating the RDM policy	100
11 Support and advice for RDM	101
Aims	101
Offering support and advice	101
Making the RDS visible	102
Frequently asked questions	103
The RDM website	105
Key challenges for advice and support	106
12 Practical data management	107
Aims	107
Introduction	107
Risks and risk management	111
File organisation and naming	112
Back-ups of active data	113
Promoting practical data management	113

Further reading	113
13 Data management planning	115
Aims	115
The data management plan	115
The benefits of DMPs	116
The content of a DMP	117
Reading an example DMP	119
Common pitfalls	121
Supporting data management planning	121
Further reading	123
14 Advocacy for data management and sharing	125
Aims	125
Introduction	125
Drivers for data sharing	127
What should researchers do to promote data use and re-use?	128
Panda talk	129
Some responses	132
Changing the culture	135
Further reading	136
15 Training researchers and data literacy	139
Aims	139
Introduction	139
Step 1: Who is the training for?	140
Step 2: What topics need to be covered?	141
Step 3: Who should deliver the training?	142
Step 4: How should the training be delivered?	142
Making and re-using educational resources	144
Step 5: How is the training to be made engaging?	144
Step 6: Evaluating training	144
Getting the right mix	145
Further reading	146
16 Infrastructure for research data storage and preservation	147
Aims	147
Technical infrastructure	147
The repository	148

Selecting data for deposit	149
Preparing data: metadata and documentation	152
Preparing data: file formats	154
Ingest	154
Providing access to consumers	155
Further reading	157
17 Evaluation of RDS	159
Aims	159
Introduction	159
Principles of evaluation	161
Measuring impact	162
A balanced scorecard approach	166
Maturity models	167
Further reading	170
18 Ethics and research data services	173
Aims	173
An ethical service	173
Research ethics	174
Dilemmas for RDS	175
Ethics in professional relationships	176
Further reading	177
19 A day in the life working in an RDS	179
Aims	179
RDM in practice	179
Strategic development	179
Advocacy, training and support	181
Repository work	182
RDM day to day	184
20 Conclusion: the skills and mindset to succeed in RDM	187
Aim	187
Working in RDM	187
Your career plan and RDM	189
Keeping up to date	192
Index	195
