Cosmic Rays and Particle Physics–1978
(Bartol Conference)

Editor
T.K. Gaisser
Bartol Research Foundation

American Institute of Physics
New York 1979
# TABLE OF CONTENTS

16-18 October—Working Sessions

## 1. EXTENSIVE AIR SHOWERS

Composition of Primary Cosmic Rays Above $10^{13}$ eV from the Study of Time Distributions of Energetic Hadrons Near Air Shower Cores (J. A. Goodman et al.)
G. B. Yodh ........................................... 1

Arrival-Time Distributions of Muons and Electrons in Large Air Showers Observed at 5200 m Above Sea Level (Bolivian Air Shower Joint Experiment)
K. Suga .................................................. 13

Simultaneous Detection of $\gamma$-Ray Bundles and Air Showers (S. Dake et al.)
M. Sakata ............................................... 18

High Transverse Momentum of $\gamma$-Ray Bundles ($>10^{12}$ eV) in Air Showers (Y. Yamato et al.)
M. Sakata ............................................... 23

Preliminary Result for the Abundance of Multicored EAS at Mt. Norikura (Norikura Air Shower Group)
M. Sakata ............................................... 29

High $p_t$ Cross Section from Multiple Core Rates in Air Showers (W. E. Hazen et al.)
W. E. Hazen ........................................... 31

National Cosmic Ray Facility to Study High Energy Physics and Primary Composition from $10^{14}$ to $10^{18}$ eV
W. V. Jones ........................................... 41

## 2. TECHNIQUES

K. Niu ................................................... 49

The Technology of Small Emulsion Chambers: A Review
R. J. Wilkes ............................................ 63
High Energy Interactions and Cosmic-Ray Components in the Atmosphere
Y. Takahashi

19 October—"Charm" Workshop

5. EVIDENCE FOR NEW PARTICLES

Cosmic Ray Evidences for Short-Lived Particles
K. Niu

Direct Search for Charm in Accelerator Proton Collisions
Taiji Yamanouchi

Observation of Delayed Hadrons in Extensive Air Showers—New Massive Particles?
(J. A. Goodman et al.)
G. B. Yodh

Evidence for Prompt Neutrinos and Interpretation of Beam Dump Experiments
G. Conforto

Evidence for Prompt Single Muon Production in 400 GeV Proton Interactions (B. C. Barish et al.)
A. Bodek

A Prompt Neutrino Measurement (B. P. Roe et al.)
L. W. Jones

Hadronic Production of Charmed and Other Favorite Particles
Francis Halzen

Charm Production by Neutrinos and the Charm Particle Lifetime
David Cline

Charmed Particle Lifetimes
Jonathan L. Rosner
6. INTERACTIONS AROUND 1000 TeV AND ABOVE

A New Type of Nuclear Interactions in the $\Sigma E > 10^{14}$ eV Region (Brasil-Japan Emulsion Chamber Collaboration)
Y. Fujimoto and S. Hasegawa

Large-Scale Emulsion Chamber Experiment at Mt. Fuji (M. Akashi et al.)
T. Yuda

High Energy Interactions at Cosmic Ray Energies
S. Miyake

Speculations Concerning Possible New Physics From Experiments Above 10 TeV
G. L. Kane

High Energy Cosmic Rays, Particle Physics and Astrophysics
A. M. Hillas

7. NEW COSMIC RAY EXPERIMENTS

Weak-Interaction Studies with the DUMAND Detector
Arthur Roberts

The Homestake Neutrino Detector as a Cosmic Ray Composition Analyser (M. Deakyne et al.)
K. Lande

Report on the Utah Fly's Eye (G. L. Cassiday et al.)
G. L. Cassiday

Akeno Air Shower Project
K. Kamata

8. NEW ACCELERATOR FACILITIES

Quark Antiquark Colliding Beam Machines
D. Cline

ISABELLE
D. Hywel White
9. POST-CONFERENCE COMMENTS ON CENTAURO

Quark Hotspots as a Centauro Scenario
David Sutherland....................... 503

What is Centauro?
J. D. Bjorken and L. D. McLerran.......... 509
