## TABLE OF CONTENTS

PREFACE	ix
1. INTRODUCTION - G.A. Schultz	1
1.1 Objectives	1
1.2 Objectives of forecasting	2
1.3 Criteria for successful forecasts	3
1.4 Systems approach	4
1.5 Principles and elements of river flow forecasting	5
1.6 Concluding remarks	9
Symbols	10
References	10
2. DETERMINISTIC CATCHMENT MODELLING - T. O'Donnell	11
2.1 Introduction	11
2.2 Linearity/Non-linearity	12
2.3 Analysis/Synthesis	14
2.4 Illustrative example	14
2.5 Linear treatment of catchment behaviour	16
2.6 Non-linear treatment of catchment behaviour	28
Symbols	35
References	36
3. THEORY OF FLOOD ROUTING - J.C.I. Dooge	39
3.1 Continuity equation for unsteady flow	39
3.2 Momentum equation for unsteady flow	39
3.3 Equations of characteristics for unsteady flow	41
3.4 Boundary conditions in flood routing	42
3.5 The finite difference approach	44
3.6 Characteristic finite difference schemes	45
3.7 Explicit finite difference schemes	46
3.8 Implicit finite difference schemes	47
3.9 Linearisation of the St. Venant equations	48
3.10 Simplification of the St. Venant equations	50
3.11 Comparison of hydraulic solutions	52
3.12 Nature of hydrologic methods	53
3.13 Linear conceptual models	55
3.14 Comparison of linear hydrologic models	57
3.15 Calibration of linear models	60
3.16 Non-linear hydrologic models	62
Symbols	63
References	64

4.	LOW FLOW SUSTAINED BY GROUND WATER - R. Mull	67
4.1	Introduction	67
4.2	Discussion of rainfall-discharge relations	79
4.3	Examples	87
	Symbols	96
	References	97
5.	FORECASTING MELTWATER FROM SNOW-COVERED AREAS AND FROM GLACIER BASINS - H. Lang	99
5.1	Introductory remarks	99
5.2	The snow cover and its determination	100
5.3	The determination of the meltrates	106
5.4	Practical methods to determine the meltrates	113
5.5	Operational forecasting equations for glacier basins where past records are available	117
5.6	Thermal and capillary retention capacity	118
5.7	Long range, seasonal forecasting	121
	Symbols	123
	References	125
6.	TIME-SERIES METHODS AND RECURSIVE ESTIMATION IN HYDROLOGICAL SYSTEMS ANALYSIS - P.C. Young	129
6.1	Introduction	129
6.2	The simplest first order, linear hydrological model	129
6.3	More complicated linear hydrological models	135
6.4	Recursive estimation of a simple time-series model	138
6.5	Recursive estimation of general linear time-series models	144
6.6	Model structure (order) identification	148
6.7	Flow modelling for the river Wyre	149
6.8	Time-variable parameter estimation	155
6.9	Salinity variations in the Peel Inlet-Harvey Estuary Western Australia	158
6.10	Time-series analysis and flow forecasting	164
6.11	Flow forecasting and the Kalman Filter	168
6.12	The Extended Kalman Filter	175
6.13	Conclusions	176
	Acknowledgements	177
	Symbols	177
	Appendix 1. The Microcaptain Computer Program Package	178
	References	178
7.	RELATIONSHIP BETWEEN THEORY AND PRACTICE OF REAL-TIME RIVER FLOW FORECASTING - G.A. Schultz	181
7.1	Link between theoretical chapters and case studies	181
7.2	Model input fields	182
7.3	Theory versus practice in real-time river flow forecasting	186

TABLE OF CONTENTS

vii

7.4	Conclusions	191
	References	193
8.	CASE STUDIES IN REAL-TIME HYDROLOGICAL FORECASTING FROM THE UK - P.E. O'Connell, G.P. Brunson, D.W. Reed, P.C. Whitehead	195
8.1	Introduction	195
8.2	Real-time flow forecasting system for the river Dee	196
8.3	The Haddington flood warning system	210
8.4	An on-line monitoring, data management and water quality forecasting system for the Bedford Ouse river basin	221
8.5	Discussion	237
	Symbols	238
	References	238
9.	RIVER FLOW SIMULATION - J.G. Grijzen	241
9.1	Introduction	241
9.2	Finite difference methods	242
9.3	Numerical properties	244
9.4	The Delft Hydraulics Laboratory method	249
9.5	Practical aspects	257
9.6	Case study: Flood control of the rivers Parana and Paraguay	266
9.7	Strategy for implementation of forecasting models	269
	Symbols	271
	References	272
10.	THE FORECASTING AND WARNING SYSTEM OF 'RIJKSWATERSTAAT' FOR THE RIVER RHINE - J.G. de Ronde	273
10.1	Introduction	273
10.2	General description of Rijkswaterstaat and its warning services	273
10.3	Organization of the riverflood warning system	274
10.4	The empirical forecasting model	274
10.5	The multiple linear regression model	277
10.6	Low flow forecasting	282
	References	286
11.	SHORT RANGE FLOOD FORECASTING ON THE RIVER RHINE - J.R. Mol1	287
11.1	Introduction	287
11.2	Flow forecasting	287
11.3	A deterministic hydrological model for the river Rhine	290
11.4	A stochastic real-time forecasting model	294
11.5	Conclusions	295
	Symbols	295
	References	296

12. DESIGN AND OPERATION OF FORECASTING OPERATIONAL REAL-TIME HYDROLOGICAL SYSTEMS (FORTH) - J. Némec	299
12.1 Introduction	299
12.2 Components of a FORTH system	302
12.3 Selection of forecasting procedures	309
12.4 Forecast updating and evaluation (WMO, 1983)	315
12.5 Benefit and cost analysis of hydrological forecasts	318
12.6 Examples of established FORTH systems	319
Symbols	319
References	319
Annex I	320
Annex II	322
13. CASE STUDIES ON REAL-TIME RIVER FLOW FORECASTING - G. Fleming	329
13.1 Introduction	329
13.2 The Santa Ynez River, California, USA	330
13.3 Derwent River system, England	341
13.4 Orchy River system, Scotland	354
Symbols	365
References	365
INDEX	367
