European ‘International Space Year’ Conference
Munich, Germany, 30 March–4 April 1992
Space in the service of the changing Earth

Navigation & Mobile Communications
Image Processing, GIS & Space-assisted Mapping

Joint Organisers:
Commission of the European Communities (CEC)
European Space Agency (ESA)
German Space Agency (DARA)

with the support of the:
European Association for the International Space Year (EURISY)
Contents

Satellite Symposium 1
Space-based Systems for Navigation and Mobile Communications

Institutional Issues
Chairman: W. Blanchard & C. Rosetti

Maritime satellite communication and navigation
P. Ehlers, Federal Maritime & Hydrographic Agency, D 5

H.O. Shirer, US Department of Transportation, USA 9

Insurance cover for space ventures
E. Steilen, Munich Reinsurance Company, D 15

Collection and distribution of ecological data by satellite – CDEDS
F. Gampe, ESA/ESTEC, NL, &al. 19

Collection and distribution of ecological data by satellite: Pilot projects as demonstration of the concept
K.-P. Graf, ESG, D, & F. Gampe, ESA/ESTEC 25

A European Radionavigation Plan?
D.W. Broughton, Royal Institute of Navigation, UK 33

Airline applications in air/ground communications using advanced technologies
H. Mensen, Lufthansa, D 37

The Canadian mobile satellite system
E. Bertenyi, Telesat, Canada 39

Fully automatic transmission of information via HF and comparison to satellite transmission
P. Iselt, Rohde & Schwarz, D 45

Land mobile satellite communications systems and services
E. Lutz, DLR, D 51

The future role of mobile satellite communications in an improved air traffic management
P. Gauthier, ALTRAN, F 57

Financial alternatives for Global Satellite Navigation
J.M. Beukers, Beuker Technologies Inc., USA 61

Mobile Communication
Chairman: G. Höfgen

Mobile satellite communications in the '90s
J. Singh, Inmarsat, UK 69

Personal communications satellite service system
L. Caporicci &al., Italspazio, I 75

SKYFIX – A better position through the use of Inmarsat and GPS
G. Mack, Racal Survey Ltd, UK 81
Precise flight navigation by integration of global positioning system & inertial measurement units
S. Vieweg, TU Braunschweig, D

A permanent near-online high-precision positioning service (HPPS) with GPS
W. Augath, NLVwA-Landesvermessung, D

OSI applied to aeronautical satellite mobile communications in EURATN
F. Monteil, CENA/Sofreavia

EUTELTRACS: The European land mobile satellite service
J.-N. Colcy, Eutelsat, F, &al.

European Techniques and Contributions
Chairmen: J.-M. Contant & W. Lechner

Global Earth observation using modern communications satellite techniques
E. Löcherbach & G. Eckhardt, ANT Nachrichtentechnik, D

Satellite navigation in agriculture
H. Auernhammer & K. Wild, TU München, D

Towards global satellite navigation
J.-M. Durand, CNES, F

COMLINE
N. Balteas, Kayser-Threde, D

Fleet management based on satellite positioning and communication
B. Höfleif, DMT Marinetechnik, D

A star pattern recognition sensor (SPRS) of high-accuracy: a contribution for new possibilities
of autonomous attitude determination
W. Skarus &al., Jena-Optik, D

An integrated car navigation system using a single processor for GPS signal processing,
positioning, map display and reporting
PG. Mattos, INMOS, UK

NAVSAT – An application of GPS and GLONASS for the civil user community
M. Haunschild, MAN Technologie, D, &al.

On-line health monitoring – An integrity improvement for the civil use of GPS and GLONASS
B. Eissfeller, Kayser-Threde, D, &al.
Satellite Symposium 2
Image Processing, GIS and Space-assisted Mapping

OEEPE-Session/Mapping from Satellite Data
Chairman: I.J. Dowman

Map production and updating using SPOT data and SPOT data derived products
J.-C. Rivereau & al., Spot Image, F

Image maps
B. Galtier, IGN Espace, & A. Baudoin, CNES, F

The production of satellite image maps – Experiments at the Technical University of Berlin
J. Albertz & al., TU Berlin, D

Precision geocoding demonstrator system
J. Laycock, GEC-Marconi, & J. Whalley, UK

Comparison of mapping with different satellite images
K. Jacobsen, University of Hannover, D

DGPF-Session/Applications to Mapping I
Chairman: F. List

Innovative applications of repeated satellite SAR surveys
F. Rocca & C. Prati, Dipartimento di Elettronica del Politecnico, I

Block triangulation of SPOT data with particular reference to the OEEPE test
L. Veillet, Institut Géographique National, F

Communications techniques supporting the management
Ph. Dosiere, Alcatel Bell Telephone, B

Mapping from SPOT data
E. Ahokas & al., Finnish Geodetic Institute

System design for Artemis environmental monitoring
H.A. van Ingen Schenau & J. Spaa, NLR, NL

Application of satellite data on seismic risk assessment – Strain analysis of fault lineament systems
P. Bankwitz & E. Bankwitz, Potsdam, D

Potentials and limitations of topographic mapping from synthetic aperture radar
L. Polidori, Aerospatiale, F

ISPRS Session/Global Digital Elevation Models
Chairman: G. Konecny

The orbital imaging system and its potential for digital terrain models of the Earth
D. Light, US Geological Survey, VA, USA

Delivery of information from Earth observation satellites
J. MacDonald, MacDonald Dettwiler Richmond, Canada

Multisensor data applications for digital landscape models
M. Buchroithner & al., Joanneum Research, Austria

Influence due to satellite attitude jitter on the estimation of digital elevation model (DEM)
Kohei Arai, Saga University, & al., Japan

Semi-automatic derivation of digital elevation models from stereoscopic 3-line scanner data
M. Lehner, DLR, & R. Gill, CAM, D
Données pour une algèbre de cartes  
S. Rimbert, CNRS, F  

A digital landscape model for Europe (DLME)  
B.-S. Schulz, Institut für Angewandte Geodäsie, D  

Image treatment and geographical information systems at the service of the common agricultural policy  
M. Van de Steene, CEC, B, &al.  

Vineyard cadastre monitoring using remote sensing data in an integrated GIS  
A. Annoni, RSDE, Srl, I, &al.  

The influence of geology and geomorphology on landslide hazards in an area in the Colombian Andes: the GIS approach  
Kees van Westen & H.M.G. Kruse, ITC, NL  

Estimation du ruissellement et de l’érosion par l’utilisation de SIG intégrant un MNT, des données Landsat et des données hydrologiques de terrain  
T. Vogt, GSTS, F, & D. Gomer, D  

Remote sensing landslide hazard mapping using GIS technology in Colombian Andes  
E. Leroi, BRGM, F, &al.  

Extraction of information from satellite imagery to a GIS for environmental monitoring of the mining areas in Northeastern Estonia  
M. Oberg, SSC, Sweden, &al.  

Remote sensing applied to mapping and other purposes: STADIS project, a practical example in Tunisia  
P.Y. Bouf & M.A. Tanné, Atlantide Grenat Logiciel, F  

The ERS-1 radarmaps of Germany and the Antarctic Peninsula  
D. Kosmann &al., DLR, D  

Satellite image mosaics from automatic scene re-navigation  
A. Newton &al., University College, London, UK  

Multispectral intelligent fusion techniques  
V. Cappellini & A. Mecocci, University of Florence, I  

The use of multiple linked self-organised artificial neural networks for classification of remotely sensed images  
D.J. Lewis &al., SD-Scicon, UK  

Neural network methods for analysis of remotely sensed satellite data  
I. Kanellopoulos &al., CEC, I  

Remote sensing and land use in the region of Tuscany: a new methodology for the integration of very heterogeneous data  
A. Annoni, RSDE, Srl, &al., I  

Assessment of actual land use by means of an integrated LIS  
G. Cortese &al., IATA-CNR, I  

Poster Session
Application of remote sensing and GIS technology to natural resources management:
Selecting rice fields in Vietnam
Pham Viet Cuong, Freie Universität Berlin, D

Integration of remote sensing and GIS data for a multi-scale study of the Po River Basin
M.A. Gomarasca & al., CNR, I

Prototype for a regional data management system – A step towards a regional land use project
C. Weber, CNRS/GSTS, & al., F

Use of satellite data and GIS for evaluating urban environment
Z. Bochenek & Z. Polawski, RS & Spatial Information Centre, Poland

Vegetation mapping and a statistical approach for the reconstruction of the potential forest cover using Landsat-5 TM data and DTM
G. Braun & M. Winiger, University of Bonn, D

An application of remote sensing and GIS technique in Mongolia
M. Ganzorig & al., Mongolian Academy of Sciences, Ulaanbaatar

Integration of digital image matching and multiple image shape from shading
C. Heipke, TU Munich, D

Land use mapping from multitemporal satellite images and ancilliary data, using a neural network paradigm
G. Pasquarello & P. Blonda, CNR, I

Valency of different information categories and its importance for the effectiveness of image analysis by the visual system and automatic systems
U. Wieczorek, University of Augsburg, D

Analysis of human impact on degradation and desertification of the West African Sahel by means of multi-level remote sensing techniques
E. Csaplovics, FU Berlin, D

The analysis of remotely sensed data with neural networks
A. Stork, Computer Graphics Center, Darmstadt, D, & al.

TM-SPOT multitemporal analysis on areas devastated by fire
A. Marini & M.T. Melis, Università di Cagliari, Sardinia

Microscale geomorphological analysis in Middle Italy using airborne and satellite remote sensing techniques
G. Boarelli, Telespazio, & al., I

The creation of a DEM from SPOT data
B. Crippa & al., Politecnico di Milano, I

Realistic landscape visualisation based on satellite images
K.Ch. Graf & al., University of Zürich, CH

The comparison of satellite radar altimeter-derived heights with global digital terrain model heights
J. Ridley, Mullard Space Science Laboratory, & al., UK

The promise of raster data processing in digital terrain modelling
L. Tang, TU Munich, D

Feature detection using ERS-1 SAR data
F.G. Sawyer & D. Lancashire, Matra Marconi Space, UK
